15 Meters has already returned and will continue to improve. The fluxes are high enough now that polar paths should not be a problem. The fall season on 15 is not as interesting as the peak season in late spring, because the spring season involves paths that span both day and night. Nighttime MUFs have begun their decline that will continue until January. 15 does NOT stay open late in the fall, so DX is workable primarily over daytime paths just as it is on 10. Night paths in the southern hemisphere do open, so 15 should be watched for long path opportunities which many DXers are unaware of.

20 is still open all night, so excellent conditions should continue through October. The Antarctic paths are open again, and daily long path openings to southern Asia are back. Worldwide DXing on 20 is almost too easy, but lowband season approaches with declining QRN levels.

I bid just under regular retail for an Edison Cygnet
Horn, only to find it relisted the next day saying that the
top bidder withdrew. I wrote immediately and agreed on a
price with the lister, for almost the highest amount, and
sent my check immediately. He held it 3 weeks and returned
the check, saying that the top bidder had decided to buy.
Right. He just found another buyer who paid more than he
had agreed to sell it to me for.

IMHP - it's what the traffic will bear. Some prices are very high but there always seem to be buyers willing to pay. Some prices are reasonable, like the scanner and receiver I just auctioned off. I got several bids for each but not more than I really thought the items were worth if I were the bidder. On the other hand, I bid on a scanner and was outbid by about double. I didn't think it was worth what soemone finally paid, but who's to say. I eventually bought that item at RS for even less then I was going to pay if I had been the high bidder. Go figure!
It's fun to "shop" Ebay and see what's going for what price. And you never know, your bid may be the high one.

>ebay are outrageous?

I think (1) there are a lot of collectors hoarding things they can't really use, expecting a stock market crash on 1-1-Y2k and wanting swappables; (2) a lot of con merchants are pretending that beer mats are valuable; (3) a lot of people finally convince their insurers by auctioning a valuable back to themselves; but they have to place an outrageous Reserve in order to do that without any risk of selling.

All of this makes for many outrageous prices not only on eBay.

Aren't ALL auctions? The whole concept is a bunch of people competing
to see who can pay the MOST for an item. It would be silly to expect a
LOW price from an auction.

For some folks, Ebay prices are a bargain and
a chance to find sets they may otherwise never
run across. There are some isolated areas where
one doesn't have the opportunity to attend shows or
auctions to find this stuff. I have found a few radios
(well, one anyways) that I had been searching for,
and got it at the going market rate.

The trick is to set a price in your mind, bid it,
stick to it, and hope for the best.

Pete

SF Bay Area ??? are you Trolling ??? E-Bay has listings from
individuals all over the US and other parts of the world, they've
also just been named to officially take over AOL's classified
ads/buying/selling. As I mentioned earlier E-Bay _Doesn't_ sell
anything _Themselves_ , and they _DON'T_ set the prices, they merely
get a brokerage or percentage of the item's worth when it's sold as do
most _true_ auctioneers. I suspect it's folks ego's that cause such
high prices to be paid but you sure can't blame E-Bay for folks that
bid _more_ for items than you can buy them new for.

How do they get around the registration part in order to bid? I just got burned on a telephone to the tune of $25.00. I was high bidder and sent my money order but never received the phone. E-bay had no valid address and the phone was disconnected. I have also been burned on other items..I bought a computer with 17" monitor and the monitor crapped out after two days. The seller said I must have changed something and would not make good. I have had others, but those were the worst. I would say 70% good and 30% bad. I have bought items very cheap and sold items very high (much to my suprise) so I guess it is a crap shoot. A lot of people actually run their businesses on E-bay. I wish there was a way to tell who is a private party selling an item and who is a business. I think that makes a difference.

Hi Bob...I am just an Individual....but sort of a dealer....I buy and sell
and restore mostly antique radios...but being a Ham for 40 years...I
also do a little with old Ham Equipment....so I guess I am not a
"Business" as such...but I certainly don't want any bad advertisement
or bad feedback on E-Bay or on the newsgroups....guess thats my ...02
worth for today...

This weekend you can contact a Special Event Station on AM from
the FINAL Gaithersburg Hamfest (FARFEST) operated at the
Historic Gaithersburg Fairgrounds in Gaithersburg, Maryland.

Look for W3PRL or KB2APE on 3880-3885, 7290, 14285 and 29000 kc/s
with a fine booming AM signal. The AM Corral Gang will be holding forth
with a fine signal and introducing the Hamfesters to the delights of operating
AM with those good old vintage radios, known affectionately by some
as "Boatanchors!"

Don, there IS a place.

It is kind of strange but the BOB DUCKWORTH's APACHE AUCTION SITE
has sold a number of things at VERY VERY low prices.

I have found it is a great place to unload stuff I don't need and give someone
a bargain at the same time. There is NO FEE there!

eBAY is getting rich off the sales of things at highly inflated prices. Their
comminssions are huge for something that doesn't cost them much to operate.

Try the DUCKWORTH-APACHE auction site next time!

Go to -
http://www.atl.org/wits/

and then click on Auction.

Some of the cattegories have bizarre sounding names, but I have found some great
deals on radio gear and computer items there! ALso sold a few bits and pieces.

It is nowhere near as big as eBay, but it is FREE!

2932. CBA

Hi Dave,

>Can anyone tell me what CBA means regarding QSLing.

CBA = Callbook address

"QSL via CBA" means, that you will get the CBA via the postal address, which you can find in the callbook.

73, Georg DL5NO

Sure, but who among us doesn't need Italy on 26 meters for our
50 band DXCC?

:-)

If you can find a postoffice that knows what you are talking about when asking for an IRC! Many of the newer clerks get this glazed over look when you explain what you want.

73,
Robert

SB DX @ WW $OPDX.374
Ohio/Penn DX Bulletin No. 374

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 374
BID: $OPDX.374
September 14, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KE1Y, NC1L & DXCC Desk, N1OLO, WB2RAJ/WB2YQH & The 59(9) DXReport, AC4G, K8YSE, WB8YJF, CT1FRN, DL4MCF, F6AJA & LNDX, G4BUE & DX News Sheet, G0TSM, HL5FOP, JM1LJS, ON5NT, PS7AB, RW0MM, VO1XC and Z32ZM for the following DX information.

3V, TUNISIA. Eddie, W6/G0AZT, will once again be active from here. Look for him between October 15-20th from 3V8BB and participating in the JARTS Contest. Activity will be mostly on RTTY and on 80-10 meters with only a 100 watts. QSL direct only.

5A, LIBYA. The "DX News Sheet" reports that Abubaker will be active as 5A29, September 2-7th, to commemorate the 29th anniversary of the "Revolution of Libya". QSL via 5A1A.

6K98/D98, SOUTH KOREA (Attention Prefix Hunters). Look for special event stations D98WCX and 6K98WCX to be active now until November 10th. These stations will be operating SSB, CW, and SSTV. Operators are from KARL (Kyongbuk branch -6K0ZZ) and Kyongju HAM club (HL0FSI), and they are on the air in celebration of "The Kyongju World Culture Exposition". QSL via Bureau or to HL5FOP (P.O.BOX 97, Kyongju, 780-600, KOREA). Help with more details and questions can be obtained by Jung, HL5FOP, via E-mail at: rayman1@chollian.net

9V8, SINGAPORE. Look for special event station 9V8SEA to be active between November 13-15th during the "SEANET 98" convention. Activity will be on all bands including 6 meters (CW 50085 and SSB 50115 kHz). For further information on "SEANET 98" contact 9V1UV at: Comline Services, 622 Serangoon Rd., Singapore 218222; or via the InterNet at the E-mail address: seanet98@sarts.org.sg

9Y, TRINIDAD AND TOBAGO. Members of the Bavarian Contest Club (DK6WL, DL4MCF, DL4MDO and DL4MEH) will be active from Tobago Island (IOTA SA-009) from October 15-31st. They will be an entry in the CQWW DX SSB Contest

as a Multi/Single using a special callsign (callsign was not given). They will be on before and after the contest using 9Y/homecall on all bands (160-10m) on CW/SSB/RTTY. QSL via bureau to their homecalls and to DL4MDO for contest QSOs.

CT98, PORTUGAL. Portuguese amateurs will continue to use the prefix CT98 (also CS98, CQ98 and CU98) until September 30th, during their "Expo 98". Claudio, CT1FRN, has been signing CT98FRN almost every day on 20 meters from 0000 to 0200z (giving out 2 points for a special award for the "EXPO 98"). QSL CT98FRN via CT1FRN to the bureau or direct to: Claudio Cepinha, PO Box 247, 2871 Montijo, Portugal. For details on the special award check out the Web page: http://www.rep.pt/de98_i.htm

FH, MAYOTTE. Bruno, TK5PB, will be active as FH/TK5PB from November 12-25th. He plans to be active from a few different islands such as Grande Terre, Petite Terre Brandele and Bambo. He will only be active on SSB. QSL via his home address at: Bruno Padey, Le Magenta 1, F-20169 Bonifacio, France.

FW, FUTUNA ISLAND. Marcel, ON4QM, is here as of last Thursday and is active as FW5XX. The "LNDX" states he will stay on the island for 2 months. Activity will probably be on all bands. QSL via CBA.

IOTA NEWS.....
AF-073. The DXpedition to Qerqenah Island which was planned for September 11-18th (refer to OPDX.369) had to be postponed until the second half October, with dates around the CQWW DX SSB Contest. Mome, Z32ZM, was inform by Hrane, YT1AD, that there was some kind of administrative problem. However, all other preparations for this IOTA DXpedition are going fine.

EU-011. Shaun/M0BJL and Darren/G0TSM will be operating from the Island of St Martin`s in the Isles of Scilly from October 2-5th, using the callsign GB4SM. They will be operating on all bands from 80-10 meters and at times there will be 2 stations on the air. The main operation will be on SSB, but they will try some CW. QSL via the bureau or direct to: Darren G0TSM, 10 Swift Close, Eastleigh, Hampshire, SO50 9LD, U.K. More detailed information about their operation is available on Darren's WEB page at: http://www.qsl.net/g0tsm/

NA-136. The Greater Norwalk Amatuer Radio Club will activate Sheffield Island (USI CT008s) on Saturday, October 8th, from 1300z until sundown local time. Operations will on 80-10 meters including the WARC bands (conditions permitting). Activity on both CW and SSB can be expected. They hope to have 3 stations operating simultaneously. QSL DIRECT ONLY! Please include a SASE or an IRC. If you have any questions please contact N1OLO via E-Mail at: N1OLO@qsl.net

SA-071. Look for PT2VE to be active from Santo Amaro Island (DIB 10), October 22-26th. Operations will be on SSB/CW with activity on 80-10 meters. QSL via the Bureau or direct to: PY2YW, A. Demarinis, PO Box 65002, 01390-970, S. Paulo/SP.

KH0, SAIPAN. Kazu/JA3ART and Hide/JM1LJS will be active October 16-19th, as KH0/N3JJ and KH0/JM1LJS. Activity will be on all HF bands and including 6 meters. QSL KH0/N3JJ to: Kazuo Ebihara, P.O. Box 62, Sakyo Kyoto 606-8691, Japan or via bureau to JA3ART. QSL KH0/JM1LJS to: Hideyuki Kai, 915, Takata, Kohoku Yokohama 223-0063 Japan or via bureau to JM1LJS.

NEW ENTITIES ADDED TO THE DXCC LIST. If you are not a subscriber to the OPDX's InterNet Mailing List, you missed the announcement this past week that the ARRL Awards Committee has accepted a recommendation of the ARRL DX Advisory Committee to add the Marquesas Islands and the Austral Islands to the DXCC List. The additions will be effective with contacts made beginning 23:59 UTC on 31 March, 1998 and after. The DXCC Desk will accept QSL cards for both the Marquesas and the Austral Islands beginning October 1, 1998. QSL cards received before that time will be returned without action.

QSL INFO AND NEWS......
Bruce, AC4G (ex-N4GAK), QSL Manager for Ken, V73C, reports that Ken has retired V73C as of August 25th. Ken has moved stateside to Washington state. No other details are available now, but Bruce will follow up with more details later. As some folks know, Ken got married earlier this year to Irina, a YL from Moscow.

SPECIAL EVENT STATION. The "DX News Sheet" reports to look for GB100AR next weekend, September 19th, to celebrate 100 years of amateur radio and the first two-way trans-oceanic amateur radio contact in 1923 between 8AD in France and 1XAM and 1MO in the USA.

SPECIAL EVENT STATION (FAR EAST OF RUSSIA). Special event station UE0LLL will be active on the air now until October 8th, in celebration of the 70th anniversary of the first Russian Far East hamradio station,"AS3KZ" (which began on October 5, 1928). The station will also commemorate its 1st operator Vlad Mekhailoff, UA0LL, (1911 - 1988), the radiopioneer. The station is located in the port-city of Vladivostok (CQ zone 19). Activity will be on all HF bands, CW/SSB. QSL via bureau or RW0MM, CBA.

SV/A, MOUNT ATHOS. Thanks to Dominic, DL5EBE, a rare treat has taken place over the last week and will possibly last until September 20th. Dominic is currently visiting Monk Apollo, SV2ASP/A, and is installing some new equipment which includes an antenna for 160 meters and new antennas for 80/40 meters. While there, Dominic has been active on "CW" as SV2ASP/A which is very rare from here. Also, look for some RTTY activity while Dominic is there. By the way, Apollo's station is ONLY 100 watts. QSL via Monk Apollo, Dochiariou Monastery, GR-63087 Mount Athos, Greece - Europe.

V6, MICRONESIA. "The 59(9) DXReport" states to look for JH1BLP, JP1WDN and 7L1PBB to be active September 14-21st as V63LP, V63CV and V63DI. Their activity will be on 160-6 meters, CW and SSB. QSL via respective homecall.

VP8, FALKLAND ISLANDS. Carl, G4VFU, who was active from here earlier this year is currently back in the U.K. for a well deserved break. Carl will once again be on the air from here (activity on 80/160 meters), beginning

September 20th to 23rd, as VP8CJZ. Carl states that there was some confusion last time on where he was operating from when he uses the /mm (maritime mobile). When Carl is operating as VP8/G4VFU/mm, he is operating from the vessel. When Carl is operating as VP8CJZ, his new callsign, he is operating from the Falklands "on shore and ground". Carl is now on the InterNet, and he will answer any of your questions or verify the log at: CTFW18@hotmail.com

XX9, MACAO. Jon/WB8YJF and Leo/K8PYD will be leaving September 20th to be active from here and then return on October 1st. They plan to be active in the upcoming CQWW RTTY Contest and hope to use the callsign XX9YD, if they can get Leo's old callsign back, or else they will try to get XX9TJF or XX9TRY. They also planned to be active before and after the contest. Jon states that he will be taking his TS-830S and AL-811 amp. They will use a 3 element beam on 10/15/20 meters, a vertical for 80/40 meters and dipoles for the WARC bands. They will try to work some 30/17/12 meters RTTY. There may also be some VR2 activity before and after the contest.

ZD9, TRISTAN DA CUNHA AND GOUGH ISLAND. A station signing ZD9/ZS1B was up and active on 20 and 10 meters this past week, but has now gone QRT. The operator named Bud who came with the supply ship from South Africa, states that he would be moving to Gough Island (rare IOTA AF-030) during this past weekend. However, while preparing this bulletin it seems this operation did not take place due to heavy winds gusting to 60 knots. Because of the high winds, the helicopter could not land on the island. Access to Gough Island is via a helicopter due to the steep cliffs. It was mentioned by Bid that if landing is unsuccessful, the ship will return in two weeks for a 3-5 day stay on the island. Hopefully, the weather will co-operate.

Hi Jim -- well I counted 25 DX related out of 60 or 70 postings. And
many of the non-dx postings were E-Bay responses. Many folks respond to
all the news groups in the original -- never thinking to limit the
response to the appropriate news group.

The honest answer is -- when its free and no enforced rules -- folks do
what ever they please.

Still a good news group -- no better or worse than most of the others I
suspect.

Bob's right
i've seen sites with 50 people having the virus and none realising it,
merely wondering why word was misbehaving!
Ron, the likelyhood is, there was no way the poster realised it was
infected.

why is everyone always sooo uptight in newsgroups? is it worth it?
no i'm not flaming anyone, merely slighly interested in radio comms.

I agree. Almost all the dealers that sell their radios on Ebay fully expect retail or higher. Although I have purchased radios from Ebay. I limit my participation due to the very high prices. I mainly go for the stuff others are not interested in.

But clearly the dealers want NO LESS than retail, and are happy to get far above that. But in the final outcome it is us, the buyers, that cause this problem. No seller is forcing us to purchase their goods.

SO bid responsibly, and LET THE ITEM GO IF IT IS TOO HIGH. If we the buyers start to get this discipline, prices with retreat!!!

That's "my opinion on the subject..

I'm a total newbie and have recently bought a YB 400. Now I would like to learn more about DX:ing.

First of all a question which I have read many articles about: Is there any hope of enjoying SW broadcasts with a YB 400?

My second question is related to the subject of this posting.
I have a about 6 meter high aluminium "telescope" antenna fixed at the end of my house (the top reaches about 10 meters straight up in the air). From the antenna I take the signal in to the house with a 50 ohm coaxial cable. Now I'm curious of knowing if there is any point of having this antenna rigged? Or is there any way i could improve it?

Tnx.

2948. Announcing West Coast Triple

Newsgroup: rec.radio.amateur.dx

OM, XYLs, YLs, especially FISTS members,

Sorry for the "spam", but I'd like to tell you all about
an upcoming special CW/code event on Saturday, September 19th!
Seems that the September FISTS Keynote newsletter that contains
our full announcement is going to be too late for the event,
thus we're trying to spread the word as best we can by other means.

From 2000Z on the 19th until 0400Z on the 20th, three
FISTS-affiliated clubs, K7FFF, K6FFF, and WA7YYY are hosting
a special CW event on most bands, including Novice segments.
The name of the event is the West Coast Triple, named for the
callsigns, three club states (OR, CA, WA) and the points awarded.

For current and future FISTS members each club contact is worth
3 points towards FISTS awards (9 points total!) and if you work
all three clubs (any band) and submit an SASE you can receive
our special WCT Certficate, suitable for framing.

All the details can be found on the K7FFF website, specifically
at: http://www.imagina.com/webpages/casey/k7fff/FNW_WCT.html

We really hope to hear and work all of you who choose to participate!

Now back to your regularly scheduled newsgroup...

73,

Casey, KS7J, Trustee K7FFF, FISTS Northwest, #4400, CC# 457

This is one of the most appropriate and on-target comments about eBay,
and auctions in general, that I've ever read.

One kind of item for which eBay has actually improved the auction process
is phonograph records. The customary way for auctioning them has been
for the seller to send lists in the mail, and bidders submit their bid.
It's not a highest bid with a proxy system like eBay--what you bid is
what you bid. You never know if you're bidding high enough or not until
it's over. And you don't know if you're bidding way too high or not.
eBay has actually improved the auction process in this one regard.

And you never know who you're bidding against.... Even if it's the original seller..shilling.

I know of at least one case in the RADIO arena where eBay found a man using multiple accounts to shill and booted him off...errr, well...almost. Many of us are sure he's still selling and probably shilling under another name. eBay now will do little about it!

I agree that it is a sellers paradise there. Once in a great while you
can catch the bidders off guard as I did when I bought a radio from there. I
actually paid about the right price or maybe a little less considering he
also had about $150+ in accessories. The nice thing about ebay is that you
can check the sellers track record (if he does a lot of business on ebay).
This is a very nice feature that set me a bit more at ease. I was very
satisfied with that particular deal.

Hi all, and thanks for reading this.

The Southside Amateur Radio Society web site has just been updated, new features include:-

The September Newsletter (down loadable),

The makings of a VK stolen equipment page

Updated member list with Email and personal web pages.

Updated links page (small but growing)

And of course the 1 kW linear project by VK4YE.

We hope to make this a premier site with good content so please pay us a visit and tell us what you think... just leave us a note in our guest book. The Web address appears below.

Hi,

I will be travelling to the USA in a couple of days and was thinking of buying a Cushcraft Log Periodic there, since I expect prices to be considerably lower than in Europe. So far, Ham Radio Outlet in CA and VA turned out to be great stores with great people running it, but upon checking, I found that none of the other stores is close to the places I will be travelling to (Detroit, Ann Arbor, Cleveland and Chicago). Can anyone recommend a good location with a well selcted stock of Cushcraft anntennas?

BTW, is there an alternative product to the SkyLog by another manufacturer? Any recommendations? I need a not too large and heavy antenna to cover the 5 bands from 20 to 10 Meters, not necessarily a LogPeriodic.

TIA,

Peter Lemken

While they do not stock these antennas, Purchase Radio in Ann Arbor can order whatever you want. Perhaps you can call them (734-668-8696) before you arrive in town and they can order your antenna in time for your visit.

New QSL.Net Server Commisioned

Yep, another one!

Dx.QSL.Net is a web server dedicated to Dx'ers!
This new server will soon have near real-time log
checking and query during major Dx-peditions.

Please see: http://dx.qsl.net

Set a bookmark and check back as things get
installed and set up.

73 es Dx!

2976. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6tqclh$ldj@news.Hawaii.Edu>
Source record: 27859
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.digital.misc

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

SB DX ARL ARLD037
ARLD037 DX news

This week's bulletin was made possible with information provided by KB8NW, N4GN, the OPDX Bulletin, QRZ DX, DXNS, The Daily DX and Contest Corral from QST. Thanks to all.

SWAZILAND, 3DA. Jon, 3DAOCA, is QRV daily from 1800 to 2000z looking for Europe and Japan on 160 meters. QSL via W4DR.

CHINA, BY. Look for Special Event Station BT2HC, located in Hunchun City, to be QRV September 19 and 20 on 40, 20 and 15 meters using CW and SSB. QSL via KU9C.

CHILE, CE. Special Event Station XR40TC is QRV throughout September. This is to celebrate the 40th anniversary of the Temuco Radio Club. QSL via CE6TC.

IRAN, EP. Andy, EP3LAH, is QRV on 15 meters using SSB from Avan, Northern Iran. QSL via RV6LAH.

WALLIS AND FUTUNA ISLANDS, FW. Marcel, ON4QM, is active as FW5XX, and will be here for two months. Activity is expected on all bands. QSL to home call.

SOUTH KOREA, HL. Special Event stations D98WCX and 6K98WCX are active until November 10. Members from the Korean Amateur Radio League Kyongbuk Branch and the Kyongju ARC are QRV to celebrate the World Culture Exhibition in Kyongju. QSL via HL5FOP.

SVALBARD, JW. Carlos, LA9PJA, is QRV until September 21 as JW9PJA, using CW, SSB, RTTY, Pactor and SSTV on 160 to 6 meters. QSL to home call.

MOUNT ATHOS, SV/A. Dominic, DL5EBE, is QRV until September 23 from Monk Apollo's QTH as SV2ASP/A. Look for his CW from 160 to 10 meters, including the newer bands. QSL via SV2ASP/A.

EUROPEAN RUSSIA, R. Look for Special Event Station UE0LEZ, located in the Posyet Zarubini Ports in Russia, to be QRV September 19 and 20 on 40, 20 and 15 meters using CW and SSB. QSL via UA0MF.

HONG KONG, VR2. Leo, K8PYD, and Jon, WB8YJF, will be QRV from September 21 to October 1 signing VR2/homecalls. Activity will be mostly CW and RTTY with some SSB. QSL to home calls.

IRAQ, YI. The Radio Club of Baghdad will be QRV September 22 to October 1 with Special Event Station YI89BIF for the Babylon International Festival. QSL via operator's instructions.

TRSITAN DA CUNHA, ZD9. Ian, ZD9IL, is QRV on 40 to 10 meters. He can operate only from 0900 to 1600z. QSL via ZS5BBO.

THIS WEEKEND ON THE RADIO. The YLRL Howdy Days, ARRL 10 GHz and Up Cumulative Contest, Air Force Anniversary QSO Party, Washington State Salmon Run, Scandinavian Activity CW Contest and the Tennessee QSO Party will keep contesters busy this upcoming weekend. Please see September QST, page 103 for details.

2982. Nigeria - prospects for licensing?

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-17 00:00:00 UTC
From: Charles Eddlemon <ceddlemon@wnm.net>
Message-ID: <36019DBC.6B86D66A@wnm.net>
Source record: 27865

A friend of mine has applied to participate in a teaching/missionary assignment to Nigeria. From what I gather he would expect to be in the country for approximately six months early in 1999.

Where would he start to determine the prospects for obtaining a temporary license to operate in the HF bands as an amateur from there?

Are the prospects for such an operation even possible?
If so, is this likely to be an expensive operation to get approved?

Does anyone know of any EMail contacts he could make?

I will forward any advice you might have to him in Denver.

If this information is readily available at a known site I apologize for wasting the bandwidth ... but I would appreciate the URL address.

If anything develops out of this I will be happy to post the information if there is any general interest.

Thanks,

Charles W4BIV

2984. Try ONSALE

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-18 00:00:00 UTC
From: Joe Burnham <kavman@gate.net>
Message-ID: <6ttic7$1kbu$1@news.gate.net>
Source record: 27867
Cross-posted to: att.ham-radio,rec.antiques.radio+phono,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.spa

After reading most of the thread about ebay prices and problems, I suggest you give ONSALE a try.
http://www.onsale.com/

I don't work for them, or get any type of compensation...I'm just a happy bidder/user.
I've bought 3 items, had problems with one (returned it to the company that sold it, and got a higher grade piece in return).

Unlike some other auction sites, ONSALE goes out of it's way to lay out exactly WHAT the item is, whether it's new or refurbished, who-covers-what in terms of warranty and repair, and when it is shipped.

On the east side of Cleveland there is an AES, Amateur Electrinic Supply, store in Willowick.

A couple hours on the Interstates there is R&L in Hamilton, OH. They are north of Cincinnatti.

Bring a handheld along with you. You can get directions to AES on 146.88 (-600 and 110.9 tone) and 146.76 (-600 and 110.9 tone).

I'll be looking for you on 146.88.

73,
Bob W8IMO

A pileup of DXpeditions at URL:
http://www.ac6v.com/pageac.html

Includes these current or planned operations:

DXpedition to Guadeloupe - By The Southern California DX Club
5V7A Togo & ET3AA Ethiopia - 1998
Svalbard DXpedition - 1998
Caribbean Tour - 1998 -- From Rob PA3ERC & Ron PA3EWP
Navassa Island 1998
FT5Z 1998 DXpedition - Amsterdam Island -- Via Gil F5NOD

AND PAST DXPEDITIONS _ SOME WITH ON LINE LOGS!!
Albania -- Via K7WX
Aves I -- YX0AI
Banaba Island -- Homecoming Trip 1997
Benin -- TY5A --Via K7WX
BS7H 1997 Log Search From JA1BK
Cuba - SKï¿½UX DXpedition -- T48RCT and T49C On Line QSL Logs
FO0MIZ DXpedition & Log Search - Via JA1BK
Gambia -- Via K7WX
Georgia Republic -- 4L6PA
Ghana -- Via K7WX
Grenada -- Via K7WX
Heard Island -- The 1983 DX-Pedition and a Link to the Upcoming
Dxpedition

H40AA -- Temotu Islands DXpedition --- Logs will be here
1A0KM Log Search Page - Via IK0HBN
Indian Ocean DXpedition
Island Chaser's page
JT1Y from Ulan-Bator, Mongolia -- April, 1998
JW-DXpedition 1996 -- 1996
JY74X -- By Amir 4X6TT
K7K - Kure Atoll 1997 -- - From No. Portugal DX Group
K7WX DX Web Site -- Several past Dxpeditions
Macquarie Island -- VK0M
Maldives -- 8Q7BV
Midway Island K4M - 1997 -- From No. Portugal DX Group
Minami Torishima -- JG8NQJ/JD1
Miquelon Island DXpedition From The Prairie DX Group -- Real-Time
Logging

Montserrat -- An All YL DXpedition
Myanmar (Burma) -- XZ1N -- Via K7WX
OKDXA Past DXpeditions -- Details and QSL Cards

OJï¿½-DXpedition -- June 1997
OKDXF Pacific 98 DX Expedition - Logs On Line
North Korea -- P5/OH2AM

Peter I Island -- Incredible DXpedition
Pitcairn Island -- VR6
Pratas Island -- BVP9 -- Via K7WX

1997 Scarborough Reef -- BS7H
3B7-St. Brandon Expedition - 1998
St. Paul Island -- CY9AA
Scarborough Reef -- BS7H
SM7PKK -- DXpedition Site
Spratly Island -- CDXC Dxpedition to Spratly Island (9M0C, AS-051)

Thought I'd pass this along -- tis from DL6FBL

Hi!

This is Ben, DL6FBL.

I am happy to announce the following operations:

CQWW SSB

CN8MC or CN2?? (op DL6FBL)
Single OP / All Bands / High Power / not assisted
October 20-25
All bands 160-10m

CQWW CW

CN8MC or CN2?? (op DL6FBL)
Single OP / All Bands / High Power / not assisted
November 25-29
All bands 160-10m

Operating WARC bands before the contests.
QSL cards for SSB+CW will come automatically via Bureau.
People who can't wait, send directly to DL6FBL (CBA).
I will answer directly, if return postage included.

I will update this info as soon as I will definitely know,
which callsign to be used.
My Email address is: mailto:dl6fbl@boc.de.
I will soon activate some webpage: http://www.boc.de/dl6fbl/

73 de Ben
DL6FBL

See you in the contest!

Yep.
AZ = Argentina
2D = United Kingdom, with the D I would guess it is GD
ZZ = Brasil

> AL is assigned to Alaska but who has AM ??

AM = Spain used that one during the Barcelona Olympics

> And would you believe AT is assigned to India ??

AU, AV and AW, too

> Find these and lots more at URL:
> http://www.ac6v.com/pageab.html

Why? They are common knowledge, aren't they?

2992. Prefix Riddle

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-19 00:00:00 UTC
From: Siegfried Rambaum <siram@adore.lightlink.com>
Message-ID: <Pine.SUN.3.95.980919174040.21003A-100000@adore.lightlink.com>

> Find these and lots more at URL:
> http://www.ac6v.com/pageab.html

Now a question for you. What are the following prefixes, and what is unusual about them?

DA = Germany, but ...
DE = Germany, but ...
DM = Germany, but ...
DN = Germany, but ...
DO = Germany, but ...
DP = Germany, but ...

Checked with your webpage, and found, you obviously would not know the answers.

Kick out DI, DQ and DR from your webpage listing ... those have never been assigned or were ever used in any way, and there are currently no plans to use them for amateur radio in Germany.

Now, what is special about those prefixes listed above.... ?

73, Siegfried, KB2YVC

Congrats, Bernie,

You are damn close with some, though not close enough. But that you got this close with DA and DE, even knew the historical part of DM ... that's impressive. However, your answer is not the whole story with these.

Hint for prefix hunters in North America:

Keep your ears open for DM, they are due to reappear again
Keep your ears open for DN, they will occasionally show up on hf, too

Anyone else out there with an idea, what might be special with the DA, DE, DM, DN, DO and DP prefixes?

I would agree they are knowledge, but not so common judging from the
queries here.

Any way -- happy to read some DX-related dialogue here instead of the
endless others that belong on policy or swap rec pages.

Looking forward to the riddle prefixes -- will include on the prefix
list.

Source record: 27485

You should have the answers by now already.

On AC6V's webpage I found:

S0 Western Sahara
S2 Bangladesh
S3 Bangladesh
S4 South Africa
S5 Slovenia
S7 Seychelles
S8 South Africa
S9 Sao Tome

Which gives me grounds for a new riddle:

(a) Why is there no S1 prefix listed?

(b) Was S1 ever used in recent history?
(Let's define "recent history" as "last 20 years")

Was S1 ever used?

If so: What country was it used for?
Were contacts valid for DXCC?
Where was the country located?
What was (were) the call(s) used?
When had S1 calls been on the air?

SB DX @ WW $OPDX.375
Ohio/Penn DX Bulletin No. 375

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 375
BID: $OPDX.375
September 21, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1OLO, WB2RAJ/WB2YQH & The 59(9) DXReport, K4VUD, W4WX, N5UR, N6RT, K8EP, WB8YJF, AP2TJ, BV4FH, C6AFV, DJ5AV & DX News Letter, DL2VFR, DL6FBL, G3XTT, G4BUE & DX News Sheet, IK1QBT, JH6RTO, ON4ANT, P43P, PA3AXU, PA0JR, PS7AB, PS7KM, PY1KS and ARRL Letter for the following DX information.

3A, MONACO. "The 59(9) DXReport" states that Luc, I1YRL, will once again be active as 3A/I1YRL in October and November. No specific dates were given. QSL via I1YRL.

7O, YEMEN. Zoli, HA5PP, reported to OPDX last Thursday that he will be traveling to Sana'a, Yemen, on Friday, September 18th. KYFC!! (Keep Your Fingers Crossed)

9H0, MALTA. The Dutch Amateur Radio Society (V.R.Z.A.) has planned their 11th DXpedition/holiday trip and will be active from here October 3-18th. The group of 24 hams will activate the Island of Qawra (EU-023) with five HF stations using their own 9H3 callsign on CW and SSB. A special club station callsign has been issued, 9H0VRZ. QSL Manager for this station is PA0JR, Andre van den Bos, Korianderweg 25, 9731 HW Groningen, The Netherlands. More information and direct QSL addresses for all participants can be found on the WEB site: http://www.vrza.org/malta.htm

9M6, EAST MALAYSIA. Ed, K8EP, will be operating from the station of 9M6AAC. He will be there from October 8-11th. Ed will be concentrating on CW but also some SSB. Operations will be on mostly 40, 20, 17, 15 and 10 meters. QSL route is via N2OO.

9N, NEPAL. Good news for those who need Nepal! The "DX News Sheet" reports that the following operators have been issued new licences in Nepal: Khatri/9N1AB, Navin Mainali/9N1AC (previously 9N1CW), Mr. Sunuwar/9N1AD, and Gourish Kharel/9N1AE.

9Y, TRINIDAD AND TOBAGO. Members of the Bavarian Contest Club (BCC) will be active from here October 15-31st. Operators will be DK6WL, DL4MCF, DL4MDO and DL4MEH, and they will sign as 9Y4/homecall from Tobago Island. Operations will be on CW/SSB/RTTY with operations on 160-10 meters. They will also be a Multi-Single entry in the CQWW SSB Contest with a special callsign. QSL via their home calls.

A3, TONGA. The "DX News Letter" reports that Klaus, DJ4SO/A35SO, and Manfred, DJ7RJ/(will receive his call upon arrival), will be active from here October 1-19th. They intend to operate with a FT-847 and a IC-775DSP, no power amplifiers and vertical antennas (HB9CV on 6m) on 160-6 meters. QSL via the bureau to their homecalls.

A3 AND 5W, TONGA AND WESTERN SAMOA. Gerard, PA3AXU, reports that he will depart on October 19th, from Amsterdam Airport for Tonga. He will arrive on October 21st, and his callsign will be A35XU (his license to be picked up upon arrival). He will stay in A3 until October 28th, where he will then transfer to Western Samoa. His callsign will be 5W0GD and plans to stay until November 8th, at which time he will depart from 5W for PA-land. He will use a TS-450SAT, DX-70 (for 6 meter monitoring), GPA-30 and wire dipoles. Operations will be on RTTY/CW/SSB with activity on the "normal DX-frequencies", including the WARC bands, and a trial and error on the low bands (he has no AMP). Gerard is looking for input on whether to put an emphasis on particular bands/modes. Request are welcome at:
dijkers@molyvos.net
QSL to: G.A.M.C. Dijkers, PA3AXU, Dokter P.A. Cornethof 3,
6669AZ Dodewaard, The Netherlands.

AP, PAKISTAN (on CW and RTTY). Nasir/AP2NK is active on 20 meters CW beaming short path to the USA 0130-0300z. Look for him around 14010-14030 kHz. QSL via CBA. Tariq/AP2TJ is active on 20 meters RTTY at the same times, again beaming short path to the USA, usually on 14083 or 14085 kHz FSK. QSL via W3HNK.

ARRL OUTGOING QSL BUREAU. Starting January 1, 1999, the ARRL Outgoing QSL Bureau will increase its fees from $4.00 to $6.00 a pound, (150) cards. The increase is necessary "to absorb the effects of a proposed postal rate increase and to bring the money-losing service a bit closer to a break-even basis" (ARRL Newsletter/Bill Kennamer). The rate for quantities of 10 cards will remain at 1 USD.

BM0, TAIWAN. Look for BM0S which is a new prefix from Taiwan. This station was active this past weekend from downtown Taichung city. This call will be on the air for just 2 weeks. Activity seemed to start on September 17th. Paul, BV4FH, was put on the air to use this opportunity to educate the BV people on how to use the radio legally and give examinations for the novice class. The QSL info for the BM0S is: P.O.BOX 2006, Taichung City Taiwan ROC.

CN, MOROCCO. Ben, DL6FBL, has announced to OPDX that he will be active in the upcoming CQWW Contests. Look for him here October 20-25th in the CQWW SSB Contest as CN8MC (or CN2??) as a Single OP/All Bands/High Power entry. Look for him again November 25-29th in the CQWW CW Contest as

CN8MC (or CN2??) as a Single OP/All Bands/High Power entry. He will be operating the WARC bands before the contests. QSL cards for SSB and CW will be automatically sent via the Bureau. People who can't wait, send directly to DL6FBL (CBA). Ben will be updating this info as soon as he knows which callsign will be used. Also, he will soon activate a webpage at: http://www.boc.de/dl6fbl/

FG, GUADELOUPE. Members of the Southern California DX Club (N6RV, K6RO, W6SR, N6ED, W6KK, and N6RT) will be active from here (IOTA NA-102) from October 17-27th. They will be a Multi-Single entry in the 1998 CQWW SSB contest using the callsign FG5BG. They will be on before and after the contest using FG/homecall on all bands (160-10 meters) using CW and SSB. QSL via bureau or direct to their homecalls. QSLs for FG5BG for "1998 CQWW SSB ONLY" via K6RO. A web page and log search will shortly be available at: http://www.qsl.net/n6ed/fg.html.

HI3, DOMINICAN REPUBLIC. Operators ON4ANT, ON4GG, ON4AOI, ON4AME, ON4AMM (YL), ON4AWK, ON4CBA and ON5LW will be active from here October 20-27th. They will be an entry in the CQWW SSB Contest as HI3/ON4ANT. Activity before the contest will be on CW/SSB /RTTY on 160-10 meters using a FT-1000MP, ALS600 amp and verticals (if they can get FT-920 from their sponsor, they might get on 6 meters). QSL via CBA or bureau.

IOTA NEWS.....
EU-075. Lars, SM3CVM, will be active during vacation as SV8/SM3CVM/P from Poros Islands in the Peloponnisos East Group between September 25th and October 7th. Activity will be mainly CW on 40-10 meter at the lower part of the band or near the IOTA frequencies. QSL to home callsign or via the bureau.

EU-098. Look for DL2RNS, DL2RVL and DL2VFR to be active from Poel Island (O-002 for German Island Award), November 13-15th. The team will use their own individual callsigns signing portable. They plan to be active around the clock using 3 stations, 1 PA and several different antennas to give everybody a chance who is interested in working this island located on the Baltic coast for the IOTA or German Island Award. They will be on the IOTA frequencies (a bit more CW than SSB!). QSL via homecalls to the bureau.

NA-136 (Update/Correction). Last week in OPDX.374 we mentioned that the Great Norwalk Amateur Radio Club would activate Sheffield Island on October 8th, this is WRONG. The correct date is October 3rd. Also, the club callsign W1NLK will be used.

KH8, AMERICAN SAMOA. Bill, W4WX, will join Don, N5OLS, in Pago Pago as a Multi-Single entry in the CQWW RTTY contest September 26-27th. If the "Space A DX Group's" travel permits, Bill will be active a few days before the contest. Bill is the founder of the Space A DXPedition Group. Visit their web page at: http://www.geocities.com/Nashviulle/9646 Please QSL W4WX/KH8 via his CBA address in Florida.

P4, ARUBA. Jacobo, P43P will be active on all bands as P40B during the CQWW SSB Contest (October 24-25th). QSL information for P40B is: Jacobo Oduber, P.O. Box 685, Oranjestad, Aruba. PLEASE SEE P40 NOTE UNDER QSL INFO AND NEWS. Depending on the results of the contest, Jacobo might have to look for a QSL Manager for the P40B callsign. In the meantime, he requests to just send direct all QSL requests for P40B to the address stated above. E-mail inquiries can be directed to: P43P@arubanet.com

QSL INFO AND NEWS.....
The Aruba QSL Bureau is NOT handling P40 QSL cards (EXCEPT P40HQ!!), since these callsigns are "specific contest callsigns" in P4 land, and it is difficult for the Aruba Bureau to keep track of all the visiting amateurs using the P40 callsigns.

C6A25FV CARDS. Delano, C6AFV, informs OPDX that he has just sent out about 2000 cards for his C6A25FV special event callsign. He requests that if you have already sent a card, do not resend, and also, PLEASE make sure that the IRCs are stamped in the lower left.

QSL Manager, Bill, K1WY, reports that he is manager for the following DX stations: 5R8ET, ET3BT, GI6YM, P29CC, S21J, TF7GX, TF8GX, UA0DC, UA0ZBK UA0AOZ and ZL3KIM. Send your cards to P.O. Box 2644, Hartford, CT 06146. Bill also has a Web Site with more info at: http://home.att.net/~k1wy

PS1A and PS1S. These two stations were active this past weekend from Grande Island (SA-029). Operators were PY1SL and PU1KDR. QSL via PY1SL either direct or through the bureau.

9M0C QSLS. Don, G3XTT, reports that all direct cards to date have been replied to and posted. All E-mail requests to date have been responded to via the RSGB bureau. All bureau cards received to date have been processed and passed to the RSGB bureau. If anyone requesting a direct card and has not received a card by September 24th, they should re-apply to Phil, G3SWH. The 9M0C team wants to thank Phil for his efforts which, so far, have involved confirming some 27,500 QSOs out of a total of 65,000 made on the expedition (and the bureau cards continue to roll in).
9N1UD AND HS0ZCW. Charlie, K4VUD, who was active on CW/SSB/RTTY from Nepal in July, August and during September, states to please QSLs via K4VUD. Also, he guest operated from HS98AG, the special event station in Thailand (callsign for the Asian Games). Charlie states that while there, he was able to obtain his own callsign, HS0ZCW, in September, 1998, SSB only. Please QSL to K4VUD.
ON50BDS CARDS. Eric, ON7LR, has asks for those who are awaiting for ON50BDS QSLs to PLEASE be patient. Eric has had a hard drive crash on his computer and is awaiting repairs. He will confirm all QSOs as soon as possible.

NEW QSL MANAGER. Bill, VK4FW, reports that he has become the QSL Manager for the following new stations: YC0IEM, YC9MKF, YC9NBR, YC1LGP and YC8VIP. QSL via VK4FW at: Bill Horner, P.O. Box 929, Gympie, 4570, Australia.

SPECIAL EVENT STATION. Now until September 28th, look for special event station IY1EY to qualify for the "Loano Elettra Award" to celebrate Marconi's radioeletric experiments on the Elettra Ship from 1919 to 1936 in the Ligurian Sea. The special prefix IY1EY will be active on all modes (CW/SSB/RTTY) and bands. To receive a special QSL card reproducing Marconi's legendary boat "Elettra", QSL IK1QBT via the bureau or direct to: Tony Gallo, Via Capo S.Spirito 1/16, 17052 Borghetto, S.Spirito (SV) Italy.

ST, SUDAN. "The 59(9) DXReport" states Pierre, HB9AMO, plans to be in Sudan for 3 months starting in October. He will attempt to obtain a license.

V2, ANTIGUA. The Frankford Radio Club (FRC) has once again announced that "Team Antigua" will be active again during October 20-30th and be a Multi-Multi entry in the CQWW SSB Contests as V26B. Before and after the contest the operators will be active using their own callsigns. Look for them to be on CW/SSB/RTTY on all bands (including the WARC bands and 160 meters). The list of operators are as follows:

OPERATOR	V2 Callsign	QSL to
Dale/N3BNA	V26A	via WB3DNA
Sam/WT3Q	V26B	via HC
Tom/N2TK	V26AK	via WT3Q
Bill/W2UDT	V26U	via HC
Doug/W3CF	V26DX	via KU9C
Barry/W3FV	V26FV	via HC
Jay/WXOB	V26J	via HC
Brian/N3OC	V26OC	via HC
Mike/KA2AEV	V26R	via HC
Dick/K3MQH	V26T	via HC

Tom, ZP5AZL, and Wayne, K5ZG, will receive their V2 callsigns upon arrival. The members of V26B, Team Antigua, have also announced that their 1998-1999 Web site is functional at the following address:
http://www.frc-contest.org/v26b/index.htm
This is a link off the main FRC Website that posts all the coming DXpeditions and other club information.

VP9, BERMUDA. Seiji, JH6RTO/AH0R, will be active from here as AH0R/VP9 from October 15-17th. He will mainly work on the WARC bands. QSL via JH6RTO or Seiji Fukushima, 1182-2506 Hase, Atsugi 243-0036 Japan.

XX9/VR2, MACAO/HONG KONG DXPEDITION (Update). As reported in last week's bulletin, OPDX.374, Jon/WB8YJF and Leo/K8PYD would be going here. Their departure date has been changed to September 22nd rather than September 20th due to a change in airlines. This may or may not effect their return date. They plan their operation with a heavy ephassis on RTTY. They also mentioned that they will have InterNet access from VR2, so they can let everyone know their exact schedules. QSL via homecalls.

ZY0, ST. PETER AND ST. PAUL ROCKS. The "NATAL DX GROUP" has announced that they will be active from here, January, 1999. There will be four operators: Randy/WX5L, Karl/PS7KM, Tino/PT7AA and another operator yet

to be announced. They plan to leave Natal, Brazil, the second week of January in 1999, with the operation to commence 4 days later. The operation will last for 12 days, or 2 full weekends. All bands and modes will be utilized, with emphasis on RTTY, 6 meters and low bands (80/160 meters). The normal DX frequencies will be used. The callsigns will be ZY0SP for SSB/RTTY (QSL via PS7KM) and for CW, ZY0SZ (QSL via PT7AA). Both QSL callsigns can be found via 1998 CB. Their total planned budget for the event will be 11,000 USD, with 70% to be allocated for the boat rental. Due to these facts, they are requesting donations to make this DXpedition possible. Funds can be sent to WX5L Randy or PS7KM Karl via CBA. The "NATAL DX GROUP" E-mail address is: ndxg@qsl.net

... or to give some meaning to those coordinates: Anti aircraft gun platforms in the Thames river mouth, which were abandonned by the RAF, just a little outside of British territorial waters. That made them a candidate for grabs, and also a potential candidate for DXCC.

But then, DXCC logic never was consistent anyway. Why is Alaska a separate DXCC country, but West-Berlin was not? Though it met all criterions for one, inclusive of being under separate administration and under Allied Overlordship?

Why were the Soviet republics separate DXCC countries, while the 48 US States which make up CONUS, and which sport more autonomy than the Soviet republics ever had, never made it to DXCC country status?

Or Canada? Potentially, there is another DXCC country hidden in Canada; the North West Territories, which are not deemed to be a province of Canada, but a territorial possession (old language: a colony) of Canada. Big eyes in Canada? Check the Canadian provincial prime ministers stamp series. Where is the stamp for the North West Territories ???

> I'm afraid Sealand ... in common with the Principality of Seborga ...
> has never received DXCC recognition!

Walt, please tell us about Seborga, even I was unaware of that one. And I guess AC6V's will become a real fascinating list, when all the small sniplets of history get added by and by.

Thanks for your detailed reply

S1 is solved ... tnx Walt (I was aware of S1AB)

With German calls, a few responses were nearly on the mark, though they all got DM partially correct only (obviously the word has not yet spread, that DM calls are due to reappear on the bands), and nobody in had a clue about DN and DO, neither those who responded in public nor those who responded by email. So here is the info on DM, DN, DO:

DM: Was used for East Germany, will be used again soon for DL. Between now and New Year's Eve, radio amateurs who held an East German DM callsign in the past can apply to have their old call reassigned to them, irrespective of the class. Beginning with 01.01.99, DM calls will only be handed out to class 2 license holders. Temporarily unclear (to me, that is) is wether DM will be assigned to new class 2 lic holders in general after 01.01.99 or will still be restricted to amateurs who held a DM in the past. The wording of the info I have is ambiguous in that respect. Either time will tell, or some reader in DL...

DN: Training Calls. Can be applied for by already licensed hams for purposes of on-the-air-training of prospective hams.

DO: A new entry level class in DL, restricted in spectrum to 2 m and 70 cm, and in power to "less than 10 watts isotropic".

A new riddle? Here is one:

Amateur Radio call signs evolved over time, and they basically come in certain formates, which allow you to immediately tell whether it is an amateur radio call sign or not. However, a few amateur radio calls were intently or erroneously assigned in formates, which do not follow the standards. Even the licencing authority of DL goofed with one DF call, but nobody outside Germany ever noticed... But that's a different story.

Well known examples for such non standard callsigns are JY1 and the late RAEM. JY1 lacks a suffix, RAEM lacked a number. Those non-standard calls were intentionally assigned .... *hummmm*, when I think of it, RAEM would have been a great object for another riddle ... Other calls were non-standard because of some typist in the licensing authority's office either having a bad day, or being unable to decipher those "chicken traces in the mud" notes from the superior, when typing the amateur radio permit.

In the early eighties there was a much sought after call operating from Africa, which did not look like it was an amateur radio call at all. In the beginning, many who heard it mistook it for a pirate even.

What was the country?
What was the call?
Were contacts with that station valid for DXCC?

Siegfried, KB2YVC

Well, since the only DE card (DE3GST) in my big shoebox o' QSLs
is an SWL station, I'll guess that DE calls are only issued to SWLs.

Good Morning Siegfried
Could it be TYA11??
In March and April 1981, my logs show 2 contacts with TYA11 in Benin. On 15M and 20M SSB, Don't recall if these were valid however -- I believe they were. I have K4YT and ON5NT as the QSL routes.

Could it have been the German Antarctic station? They have
a DP0... callsign.

> DH calls used to be novices, restricted to very small portions of the
> 80m and 10m bands. However, just in the past few months DH stations
> have apparently been given access to many more frequencies ... e.g.
> they can now be worked on 40m SSB.

This used to be the "intermediate class" A. They were allowed
to operate on VHF and up, 10 m, a large part of 80 m, and a
chunk of 15 m (there only telegraphy). Now they are recognised
as full licenses.

> DN and DO ... I don't know! And what about DQ and DR? :-)

As already said, DN ist the prefix for "training stations" where
non-licensed people are allowed to operate under the supervision
of a licensed person. DO are "entry level" stations with acess
to 2 m and 70 cm only.

DI, DQ and DR haven't been issued to amateurs yet.
DE "callsigns" are "SWL numbers", issued by the DARC
to SWL using the QSL bureau (and having passed an
inofficial exam). That means, German Radio amateurs
use now 14 out of 18 possible callsign series.

some correction here:

>Likewise DA0, DB0 (also beacons and relay stations), DC0, and DK0.
>DG0 and DH0 are "normal" individual licenses.
DG0 and DH0 shall not be given to an individual station anymore, but
existing stns are still valid.

>> I worked a DP station quite recently, but I have forgotten exactly
>> what it was! Some kind of international organisation with its HQ in
>> Germany, I seem to recall.
>
>Could it have been the German Antarctic station? They have
>a DP0... callsign.
DP is reserved for a station under German jurisdiction but OUTSIDE
Germany. There are very few stations, mostly Antartis and some in
Space (e.g. DP0MIR)

>> DH calls used to be novices, restricted to very small portions of the
>> 80m and 10m bands. However, just in the past few months DH stations
>> have apparently been given access to many more frequencies ... e.g.
>> they can now be worked on 40m SSB.
sme do also CW ;-))
>This used to be the "intermediate class" A. They were allowed
>to operate on VHF and up, 10 m, a large part of 80 m, and a
>chunk of 15 m (there only telegraphy). Now they are recognised
>as full licenses.
after reconstruction of German licensing system previous classes A
(restricted HF + VHF) and B (full) melted together giving class 1. So
there is no difference in licensing between DH and DL anymore.

>> DN and DO ... I don't know! And what about DQ and DR? :-)

you can also read the license class from DA and DN, DP prefixes:
0 - club stn., 1 - class 1, 2 - class 2, 3 - class 3.

>As already said, DN ist the prefix for "training stations" where
>non-licensed people are allowed to operate under the supervision

after reading the official text (http://www.regtp.de/):

DM is reserved for class 1 and 2. DM0 is reserved for club stns and
1-9 for individuals.
Correction to my previous posting:
DA0 - club station klass 1, 2 or 3 (not distinguishable)
DA1, DA2 - foreign military class 1
DA3 same, class 1, 2 or 3
DA4 same, class 2
DA5 same, class 1, 2 or 3
DN class 1, 2 or 3
DP0 club station outside of Germany, clas 1, 2 or 3

Seborga activity sure has been plentiful! I have cards from about 4 operations from there.

It is a principality in northern Italy. It thinks it is a separate country. They used 1P prefixes but then switched to T0 prefixes (Makes for some interesting possibilities for callsigns!) None are legitimate, and the QSO's don't count for DXCC or anything else. I considered them to be just fun.

Mine came back today, same markings. Nuts!

3013. 3D2WD via DL6DK?

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-22 00:00:00 UTC
From: K2RXY <K2RXY@worldnet.att.net>
Message-ID: <6u6t9t$o34@bgtnsc03.worldnet.att.net>
Source record: 27501

I recently worked 3D2WD and according to my notes and the DB0SDX DX manager site, his QSL manager is DL6DK.

And according to both the on-line Germany callbook (Thanks, AC6V) and Buckmaster, DL6DK is:

Peter Xaver Voits
Brunnenstr. 36
Dortmund, D44145
GERMANY

However, the German postal folks kicked it all the way back to Phoenix as "unbekannt verzogen," a phrase which has somehow eluded my small German dictionery and a few "German 101" texts. So-o-o, . . .

1. Does anyone have a BETTER address for DL6DK?
2. Do any German speakers know what "unbekannt verzogen" (unknown warped???) really means, postal-wise?

"E-Layer" is just the title of the list.

A recent discussion concerned why sunspots exist in the first place,
certainly not kindergarten material.

>"And as [Eliseus] was going up by the way, little boys came out and

Fwd from dx-list:

Good news from Africa!

I received an email from Jacky F2CW who has been Asmara for the past few weeks. He received a letter from the Ministry of Transport & Communications stating that Amateur Radio is officially open in Eritrea as of September 21st, 1998. The only "bad" news is that the license fee has currently been set at $500!

Jacky will probably pay the fee and get his license today. If this happens, he will only be QRV for one night on SSB only (his current rig does not have CW capability). He leaves for Djibouti on Wednesday morning for business for one week and will try to be QRV in his free time as J28CE. He will be back in Eritrea in a week and will then operate some more with a TS50 which is currently being shipped to him.

His callsign will probably be E30AA, as the Ministry is assigning calls starting with E30AA for visitors and E31AA for citizens. QSL via ZL3CW/F2CW.

Good luck in the pileups!

As you know, St. Croix got blasted by Hurricane Georges yesterday. There have been no communications with the island since early Monday morning. As we have three grandchildren there, we are naturally very concerned.

Any info e-mailed to stxludington@worldnet.att.net would be greatly appreciated!

Reckon on UPS taking much longer than you'd think, earlier this year I called into the Sunnyvale HRO store and got them to ship me some stuff to Florida, it was a close call, it arrived on the Friday and I was sweating as I was due to leave on the Monday. I gathered there was some mix-up in the marking, so it read like deliver some time may be --- it took 10 days.
On previous occasions, the stuff arrived in Florida way ahead of me. The good thing about shipping to a state where there is no HRO, is you don't have to pay Calif. state tax and shipment is F.O.B.

W9JUC 10 Meter activity today

Aside from pipeline into ZS, land the last few days it was a pleasant surprise to here and work the following stations on my homebrew DELTA LOOP ANTENNA.today.

South and West Africa were active until 1615Z at this QTH (near Chicago IL)

1627Z IZ8BRI Egi Southern Italy S9
1630Z Z31JA Venco East Macedonia S5
1640Z G0XAM /mm Les near Sicily S5
1644Z TK5PB Bruno Corsica S7
1744Z IK6SNR LU Central Italy S9+5
1745Z IZ6CLZ ANTHONY Central S6
1746Z IZ6BJL ALEX near ROME S9+5
1755Z IK5SRF PAULO Livorno S8
1806Z EA7HBP SALVA SPAIN S9+

New Zealand and Australia made their daily appearance begining at 2200Z.

Nothing heard out of The Far East or Central
Asia today on 10 meters.

Unfortunately I was unable to monitor 10 meters all day today but as Scarlet said," Tomorrow is another day".

You can view my TEN METER DELTA LOOP ARRAY at

http://homepage.interaccess.com/~jpearl/DeltaXray.html

No, I do not. My souces says, this address is OK (zip code should be
placed before town , but it is not a major mistake)

>2. Do any German speakers know what "unbekannt verzogen" (unknown
>warped???) really means, postal-wise?
it means: moved without leaving new address.

I'd try bureau first. In few weeks (months??) a new callsign directory
for Germany should appear. Perhaps our friend DL6DK is in, with new
address????

Same thing happened to me. I got a different address from the K4UTE
QSL manager site. The new address was entered in May 1998. The new
address is

Peter X. Voits
Uhlandstr 28
D-59192 Bergkamen
Germany

Hope it works as I am also waiting for a card.

You're right, Rich, 10 meters has been open all month.

My antenna is a homebrew 150' long hunk of wire. You can see
it in any hardware store.

I guess when ten is open, doesn't matter what you use for an
antenna.

Can't imagine why you aren't hearing Asia, I'm working tons of stateside stuff with my wire.

Here's a list of some of the stuff I have worked this month on ten on my wire antenna and a hundred watts. This is just a few hours one day, I don't want to bore anybody with the whole month:

Hi Jim,

Very impressive log for Friday the 11th of September, were you able to
operate or monitor activity on 10 yesterday or this morning? Also how is
propagation in your area to
ZD, ZS,ZL,VK, 3D2 and the South pacific- short path yesterday and today?

Your Comments please

Tnx 73

Rich

3025. Website has articles on operating, contests, QSLing

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-23 00:00:00 UTC
From: Peter Parker <parkerp@pcug.org.au>
Message-ID: <36095898.0@newshost.pcug.org.au>
Source record: 27513

Those wishing to learn more about amateur radio operating (both HF and VHF) may wish to take a look at URL http://www.pcug.org.au/~parkerp/

The webpage includes information for the newcomer to amateur radio on contesting, operating and QSLing. These articles are listed in the 'Novice Notes Online' section. You will also find information on many other facets of amateur radio in this part as well.

Special coverage is given to QRP operating under the 'Australian QRP Home Page'. There's info on operating QRP, the type of equipment you need, links and more.

73,

Peter VK1PK

Thanks to all who responded here and by direct e-mail. The Bergkamen QTH seems to be the consensus winner. I'll give it a try. I've also added one more word to my Incredible Shrinking German Vocabulary: verzogen. Vielen Danke!
73 & GUD DX,
George, K2RXY - W7RXY - K7RXY

Hello
A very good news
The expedition on FT5ZH in November will be active also on RTTY ....
A Thanks to Ray WF1B for the good software...
from 27 Nov to 23 Dec
I enjoy the pile up ..
21080 ..... 14080....
Best 73 and see you these week end on CQ WW RTTY Contest
F5NZO Didier

Yes, DX'ers are a unique breed of people Burt. My guess is that
if their wife was next door in the kitchen gagging on a piece of
fried chicken bone, and there was a rare-dx station on the air
at *ezactly* the same moment, 98% of the DX'ers would choose to
let their XYL's writhe on the floor and turn screen-saver VCR *blue*
first before missing the opportunity to work Kuntakintae in Lower
Gibipp. Reminds me of a funny event from a few years ago, when I was
a Director in a radio club. Had a director's meeting at this guy
house. After the business was over, went into this guy's shack.
(He was a big-time DX'er here in NJ - having worked 300-something
countries) He seemed to get somewhat irritated when I did not
share his enthusiasm for DX. After the 3rd attempt to get me to
pay some kind of hommige to him while sticking a *framed* QSL in
my face from some filthy rich ham who runs a sweatshop in Puerto
Rico who spends 98% of his time running to mud-huts in Africa in his
Lear jet. I then told him I did not give a rat's --- about DX. (I only
did this because he was so damm adamant about DX as being as important
as the second comming or something...) Well, I thought he was going to
toss me out of his QTH, but he seemed to not have the gutz for that, so
I retired to his living room to drink as much soda and chips he put out
and laugh about this whole incident with 2 friends of mine who were
there and shared my humor ove this whole screwball funny incident.
(he has put out several pint-size bottles of Coca-Cola...I had my CIA
type trench coat with me, and pocketed 3 of them just for funzies...)
So Burt, there U go, DX'ers: Ham radio's greatest mutual admiration
society. Almost as bad as contesters who run illegal power...birds of
a feather...

73es George wa2rcb

ps: Got on the Net. Not sure about how to E-Mail yet, as I'm new to this
I-Net stuff, but, I am enjouing the discourse's on rec.radio Keep
up the good woik Burt! :) :) :) :) :) :) :)

3029. CLX 4.02 is out

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-24 00:00:00 UTC
From: "Erwin Lemmers (pe1nmb)" <elem@kabelfoon.nl>
Message-ID: <360AA206.13712C4F@kabelfoon.nl>
Source record: 27517

CLX version 4.02 released!

CLX is a clone of AK1A PacketCluster that runs under the Linux operating system. The name CLX
stands for CLuster software running under Linux and is written by Franta Bendl, DJï¿½ZY and Bernhard
(Ben) Bï¿½ttner, DL6RAI.

Development of CLX began in February 1994 and continues today with as much enthusiasm as when
the project first began. The program is becoming more and more sophisticated as features are added
and is now virtually indistinguishable from Pavilion PacketCluster from a users point of view.

The documentation is kept upto date by Ben, DL6RAI and Ian, Gï¿½VGS. CLX comes with all the documentation it requires and is fully self contained. A user manual has been written by Ian and you
can view that and the sysop manual on-line by clicking on the manual button to the left.from this page.
The manuals come with the CLX package too. The user manual has been translated into the French
language by Gerard Parat, F6FGZ. Gerard has also done a lot of translation work on the CLX help
commands, thanks Gerard!

CLX now has an official FAQ maintainer. Matthew (Max) George, NG7M has volunteered (he wasn't
coerced, honest!) to do the deed, thanks Max! If you have any FAQ's for Max, you will find his email
address on the mail page. Please be patient while he catches up and starts to collate information for the
FAQ. If you think you can help, I am sure he would welcome it.

CLX is freeware and can be downloaded from the ftp site at ftp.funet.fi by going to the download page.
Other useful databases and software for CLX are available here too, including a link to the CLX beta
directory. Please do not use beta software unless you are an experienced CLX user. We cannot give
support to new users running beta versions! After you have successfully installed the software, you will
need to apply for an encrypted callsign. Why an encrypted callsign? Well it is simply to keep a track of
who is using the software. You can configure and run CLX without applying for an encrypted callsign

but to run on air you will need one.

If you have a program or have done any work on documentation, you can now upload it by anonymous
ftp into people/buettneb/incoming at ftp.muc.de. You can view contributions as above but in people/buettneb/contrib.

CLX has its own mailing list which is maintained by Heikki Hannikainen, OH7LZB and can be joined
from the mail page. You will also find other mailing addresses here.

The current record uptime for CLX is 17 days plus on a working cluster at PA3ERC-9. This is still
running and we do not know what the total uptime will be! Other sysops report uptimes of 7-10 days
regularly.

We are always looking for people to help with programming or documentation, especially to translate
user documentation and cluster command files into into different languages, so if you can help, please
mail Ben. You will find his address on the mail page.

If you would like to see the members of the CLX team and other CLX SysOps you can view these on the
rogues gallery. This page will be added to over time. Some of the pictures may be a bit old, but you get
the idea :-)

These pages were last updated on September 24th 1998

See for more information the homepage at http://www.lurpac.lancs.ac.uk/g0vgs/clx.html

Best 73, Erwin (PE1NMB)

ZCZC AE38
QST de W1AW
DX Bulletin 38 ARLD038
From ARRL Headquarters
Newington CT September 24, 1998
To all radio amateurs

SB DX ARL ARLD038
ARLD038 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The Daily DX, The 599 Report, The DXNL, Reinhard, DL6DQW, Gil, F5NOD, and Contest Corral from QST. Thanks to all.

ERITREA, E3. Jacky, F2CW/ZL3CW, received a letter from the Eritrean Ministry of Transport and Communications stating that Amateur Radio is officially open as of September 21, 1998, and was active as E31AA. He is expected to resume operations from here in the next few days on CW. QSL via ZL3CW.

VIETNAM, XW. Starting the first week of October special event station XV300S will be active until the end of the year to celebrate the 300th anniversary of Saigon. No QSL route was available at press time.

MOZAMBIQUE, C9. Reinhard, DL6DQW, will be active until October 6 as C91RF. QSL via home call, direct or bureau.

MALTA, 9H. A group of 24 Dutch hams will activate the Island of Qawra (EU-023) with five HF stations using their own 9H3 call signs on CW and SSB, October 3 to 18. Special club station call sign 9H0VRZ has also been issued. QSL this call via PA0JR, Andre van den Bos, Korianderweg 25, 9731 HW Groningen, The Netherlands.

EASTERN MALAYSIA, 9M6. Ed, K8EP, will be operating from the station of 9M6AAC from October 8 to 11. Ed will be concentrating on CW but will also operate some SSB. Operations will be mostly on 40, 20, 17, 15 and 10 meters. QSL via N2OO.

TONGA, A3. Klaus, DJ4SO/A35SO, and Manfred, DJ7RJ, will be active from October 1 to 19. QSL via the bureau to their home calls.

PAKISTAN, AP. Nasir, AP2NK, is active on 20 meter CW beaming short path to the USA. QSL via CBA. Tariq, AP2TJ, is active on 20 meters RTTY. QSL via W3HNK.

TAIWAN, BV. Look for BM0S which has a new prefix for Taiwan. This station was active this past weekend from downtown Taichung city. QSL to P.O.BOX 2006, Taichung City Taiwan, ROC.

FRENCH POLYNESIA, FO. Christian, F6IFC, will be active from three French Polynesian Islands as FO0RIC from September 29 to October 15. His itinerary includes Moorea Island, September 29 to October 7, Bora Bora Island, October 7 to 12, and Huahine Island, October 12 to 15.

TRISTAN DA CUNHA, ZD9. Bud, ZS1B, plans to be active September 28 and 29 on 14160, 14260, 21260 and 28460 kHz.

THIS WEEKEND ON THE RADIO. The CQ WW RTTY Contest, Scandinavian Activity Contest, SSB, and the Classic Radio Exchange should keep you busy this weekend. Please see September QST, page 103 for details.

My name is Maurizio Gibboni, I am Italian. Now I am in Italy, but my family is in Dominican Republic, city Las Terrenas, district Samana. After the hurricane, I have tried a lot of times to telephone 'em, but it's impossible because of the telephone lines damaged. I need to know something about them, if they had any damage or health problem caused by the hurricane.
Their name are: Celida Encarnacion Gibboni, 25 years old, at the end of the pregnancy time, Anna Vittoria Gibboni Encarnacion, 5 years old, Arderlyn Encarnacion Morel, 7 years old.

Please help me to contact 'em or to know something about 'em.

3034. New E-QSL service for Non USA Hams

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-25 00:00:00 UTC
From: Jack <friday@ccnet.com>
Message-ID: <360BC751.4E58E211@ccnet.com>
Source record: 27522

Non-USA Amaters

A new way to send QSL's to amateur stations in the United States!
You can cut the QSL time in half by using E-QSL on your end. Get "your"
card to a USA contact in less than a week. Check out this DX service to
the United States.

http://www.ccnet.com/~friday/eqsl.htm

3035. Look Western Carolinas

Newsgroup: rec.radio.amateur.dx

Volume 2 Number 180
September 25, 1998
Edited by Bernie McClenny, W3UR

DX News

Hitoshi Abe, JM1KNQ, is currently operating as VK9LNQ on Lord Howe Island and will remain here until 28 September. He took along a TS-570 and an IC-706. For antennas he is using a long wire for HF and a 6-element yagi for 6 meters. Suggested frequencies are as follows:

CW 1828, 21005, 24905, 50153
SSB 21253, 24953, 50153
RTTY 21085, 24925, 50053

QSL via JM1KNQ

Herman, DJ2BW, once again will head to the Indian Ocean. This time he will be in the Comoros Islands (AF-007) from 26 October to 7 November. Look for D68BW to be on all bands on CW, SSB and RTTY, with an emphasis on 12, 17 and 30 meters and the lowbands. QSL via DJ2BW.

Gus, VO1MP, reports he and VO1MX will operate multi-single as VO2CQ from CQ WAZ zone 2 during the CQ World Wide SSB DX Contest. The two will be on the air from 21 to 25 October. The QTH will be the Point Amour lighthouse which is 109 feet tall and will be used to support the 80 and 160 meter antennas. Before the contest they plan to be fairly active on 160 meters CW as VO2ZZ, also some 12 and 17 meter SSB. QSL via VE3FU.

Graham, G0VNW (ex VP2MGG), will be working as an Emergency Services Officer in Nairobi, Kenya starting 3 October. For the next 12 months he will be living in an apartment with a 120-foot roof. He has an IC-775, R-7000 and Inverted Vee for 80 and 160 meters. QSL via WB2YQH.

Didier, F5NZO, says the upcoming FT5ZH DXpedition to Amsterdam and St. Paul, which will take place from 27 November to 23 December, will have RTTY. Look for them on 14080 and 21080.

Gil, F5NOD, will be working in Pakistan from 18 to 25 October. He hopes to get a license.

Mario, HB9BRM, will once again activate 4S7BRG in Sri Lanka beginning 5 October and will be on for several months. QSL via HB9BRM.

The Dutch Amateur Radio Society VRZA will once again go to Malta to operate from 3 to 18 October. The 24 members will operate five complete stations on CW and SSB.

The group will also use the club call 9Hï¿½VRZ.

Belgian operator's ON4AMT, ON4GG, ON4AOI, ON4CBA, ON4AMM, ON4AWK, ON5LW and ON4AME will be operating HI3/ON4AMT from the Dominican Republic from 20 to 27 October. QSL via ON4ANT.

Doc, W9NY, will work the CQ World Wide SSB DX Contest from Nevis Island as V47NS. He will be there from 22 to 27 October and will be on 10 through 20 meters. QSL via W9NY.

W6VNR and N6KI plan to multi-single in the CQ World Wide SSB DX Contest from the Cayman Islands as ZF1A.

Ed, K8EP, will operate 9M6AAC from East Malaysia from 8 to 11 October. He will be on 10, 15, 17, 20 and 40 meters CW with some SSB. QSL via N2OO.

Reinhard, DL6DQW, will be active from Mozambique as C91RF until 6 October. QSL via home call, direct or bureau.

Bill, W4WX, reported he will not be on this weekend in the CQ World Wide RTTY DX Contest from American Samoa due to transportation problems.

Silent Key

Fred, K3ZO, relays the sad passing of Dale V. Dennis, HS0ZBJ/K8IXP (ex WA4FGY). Dale was an active DX'er and also a net control station for the Southeast Asia Net (SEANET). Our sincere condolences to his wife Nite and son Bob.

Correction

In Volume 2 Number 179 of The Daily DX it was reported that David Lucrock was operating 9N7RW and to QSL via G4ERN. The correct QSL route is via G4ERW, his home call! <tnx K6UR>

QSN

4U1ITU - I.T.U. GENEVA - Peter, OK1CZ, was guest operating on Thursday from 18:50 to 19:40Z on 18077. QSL via the bureau.

ET3AA - ETHIOPIA - Well they made it to 80 meters on Thursday. Activity seems to be from 08:00 to 20:00Z. Yesterday they were reported as follows:

GMT	Frequencies	GMT	Frequencies
08	21015	13	18071 21016
09	21015	14	18071 21016
10	28027	15	14027 18071 21017
11	21029 28027	19	10108
12	21016	20	3505 7007

J28AG - DJIBOUTI - Jacky, F2CW, showed up today on 14005 at 18:00Z and then again from 20:30 to 00:00Z. Next week he will go back to Eritrea as E31AA. Remember 14005! QSL via ZL3CW. Still waiting for the address.

VK9LNQ - LORD HOWE ISLAND - Hitoshi was found on 10105 from 13:45 to 15:30. Later he was on 24905 from 23:40 to 01:00Z. QSL via JM1KNQ.

XX9TJF - MACAO - Look for John today on 20 meters CW from 13:00 to 14:00Z. QSL via WB8YJF.

ZS1B/MM - Bud is traveling to ZD9.

At any time, you may request QSLs for my following DX calls via the DXcluster or email and receive replies via the bureau system. SASE requests are turned around within 48 hours (if I'm home). But, bureau cards are only processed once or twice yearly. I am NOW processing bureau cards and I will be sending USA cards directly to the 10 US call area bureaus on September 30th or the week following. (Cleaning up before next contest season.)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & GOLIST, K2KQ, KF2TI, N2TK, WB2RAJ/WB2YQH & The 59(9) DXReport, W3KT, W4WSZ, WD4NGB, N6RT, W8VI, W9NY, BA4TB, DL9RCF, F6AJA & LNDX, G4BUE & DX News Sheet, HB9CYN, HS1NIV, LZ2CJ, OZ8RO, PS7AB, YC8VIP, 4L5O and 5N0/OK1AUT for the following DX information.

3V8, TUNISIA. The "LNDX" reports that Albert, F2KN, will again be in Tunisia from October 1-15th. He hopes to be active from 3V8BB during his free times. QSL via F2KN.

3W, VIETNAM. The "DX News Sheet" reports that special event station XV300S will be active until December 31st to commemorate the 300th anniversary of Saigon city. QSL via K2WE.

5N, NIGERIA. David, OK1AUT, reported to OPDX that he is currently in Lagos and is active as 5N0/OK1AUT. His length of stay was not mentioned. He stated that he will be active on 80-10 meters CW/SSB. He was spotted this week on 21295 kHz between 2130 amd 2330z. He has also been reported on or around 3505 kHz between 0130 and 0430z. QSL direct to OK1AUT: David Klimosz, P.O.Box 53, 16201 Praha 6, Czech Republic.

BI5, XIAOYANGSHAN ISLAND (PRC). Deal, BA4TB, reports that the ShangHai DX Club and JiangSu DX Club will be active again from this Zhoushan archipelago (IOTA AS-137) as BI5X. The BI5X operation plans to be active on 80-6 meters (WARC bands included) on CW and SSB. Activity will be October 1-3rd. They will have 2 or 3 stations on 24 hours a day. QSL BI5X via BY4BHP: P.O.Box 085-299, Shanghai 200085, China.

BV9, PRATAS ISLAND. Gary, W8VI, talked with Taya, BV5BG, September 23rd, and Taya seemed very optimistic about a Pratas operation that will take place in October. Taya said on the air that "In October, BV9 will be active !". KYFC!!!

CHANGES IN UPCOMING DXPEDITIONS.......
Reports indicate that due to the ZL9 and PY0 (although this has been changed, read below) DXpeditions in January, 1999, Frank, AH0W, may postpone the Midway-Kure DX Foundation's (MKDXF) DXpedition until the end of January, 1999.

The NATAL DX GROUP announces that as a result of a recent meeting, the January, 1999, DXpedition to the St. Peter & St. Paul Rocks (PY0) has been postponed to the first week of March, 1999. This is due to the two DXpeditions to ZL9 and 3B9, as well as the convenience of the operators.

The Midway Island "K4M" operation by the MKDXF which was to take place September 20-25th was postponed.

Bill, W4WX, reports that W4WX/KH8 was not heard during last weekend's RTTY contest because he could not get a flight out of Travis to go to Pago Pago or Hicham.

CN, MOROCCO. "The 59(9) DXReport" states that Gerald, OE8GNK, will be active October 9-30th. His callsign is to be issued upon arrival. QSL via homecall.

CN, MOROCCO (Update). In last week's bulletin (refer OPDX.375) Ben, DL6FBL, stated he would be active during both CQWW Contest (CW/SSB) and was not sure what his callsign would be. Well, Ben has informed OPDX that he will use the callsign CN8WW.

E3, ERITREA. After several years of silence Eritrea was finally heard on the air thanks to Jacky, F2CW, who was in Asmara for the past few weeks. Jacky received a letter from the Ministry of Transport and Communications stating that Amateur Radio is officially open in Eritrea as of September 21st, 1998. The only "bad" news is that the license fee has currently been set at $500 USD! Jacky was only able to be active for a little while during September 22-23rd, as E31AA because he had to leave for Djibouti Wednesday morning for business for one week. The good news is that Jacky will be back in Eritrea in a week and will then operate some more with a Kenwood TS-50, which is currently being shipped to him. QSL via ZL3CW/F2CW: Jacques Calvo, POB 593, Pukekohe Auckland 1800, New Zealand.

E3, ERITREA. Bruce, WD4NGB, reports that things are moving along on the "Space A DX Group's" trip to Eritrea. He mentions that it takes time to plan a trip for 20 operators from 10 different countries. The operation by Jacky as E31AA is a plus for their plans. Jacky has also helped them to do some of the detail work before the group gets there. Bruce has asked Jacky to join them when they go to Eritrea. A few details and questions still have to be worked out. Once this happens, an official announcement with dates, frequencies, etc.... will take place. Currently, they have 4 WEB pages up and running and a 5th is under construction to speed up access. They tried to get one in Japan with no luck. These pages are:
http://qsl.ner/eritrea
http://members.xoom.com/eritrea_
http://members.xoom.com/space_a (This is the full Space A

DX Group page and E3)
http://pagus.it/E31DX (In Italy)
One in Spain is under construction.......

FO, FRENCH POLYNESIA AND AUSTRAL ISLAND. It has been reported that two French operators will be activating several islands in the French Polynesian group. Look for Christian, F6IFC, to be active as FO0RIC from Moorea Island (IOTA OC-046 and FO-010) September 29th through October 7th, Bora Bora Island (IOTA OC-067 and FO-003) October 7-12th and Huahine Island (FO-067, IOTA not mentioned) October 12-15th. Look for Joel, F5JJW, to be active as F0OSUC from Tubuai Island (part of Austral Island, IOTA OC-152 and FO-126) October 7-17th and Tahaa Island (IOTA OC-067 and FO-013) October 19-22nd.

FR/G, GLORIOSO ISLAND. A report in the "Megahertz Magazine" (a French amateur radio magazine) states that Jacques, FR5ZU, will be active again from October 7-30th, as FR5ZU/G. Planned activity includes SSB and RTTY on all bands. Look for him during the following times: 0230-0430z, 0830-0900z, 1430-1600z and 1700-1800z. QSL via JA8FCG.

GM, SANDA ISLAND (SCOTLAND). Ian, GM3UTQ, will activate this Scottish Island from now until October 3rd. The island is just south of the Mull of Kintyre. His visit is mainly for the "Islands of Scotland Award". Its reference numbers are CL-08, EU-123 (IOTA) and NR-73 (WAB square). Look for GM3UTQ/P on SSB 80-10 meters.

HK, COLOMBIA. By the time you read this, Gerard, F2JD, may be active from here. Activity is to start during the end of September and last for one year, probably two. He hopes to renew his previous licence as HK/G0SHN. QSL via F6AJA.

HP, PANAMA. In October, Roger/DL5RBW, Rainer/DL1RBR and Markus/DL9RCF, will be visiting Guenter/HP1XVH on Contadora Island (IOTA NA-072). Activity is planned during the CQWW SSB Contest using the callsign 3E1DX. QSLs for 3E1DX go via N0JT. Before and after the contest, QSLs go via homecalls.

HS, THAILAND. Nida, HS1NIV, states that the Chiangmai HF Clubstation (HS5AC) or the official Chiangmai "Ham" Association will be active in the November CQWW CW Contest as a Multi-Single entry. He is currently looking for more operators. The station consists of: TS850S, TS450S, A4S w/t 40m, R7, FL2100 1K Linear, a desktop computer running CT, etc. Chiangmai is located in the north region, 800 Kms north of Bangkok and it will be winter during this time (10-18c, sunny). If interested, contact HS1NIV, not the manager, via E-mail: aixxo004@cmu.chiangmai.ac.th

J3, GRENADA. A group organized by YCCC will once again activate a 6-band Multi/Multi station during the CQWW CW Contest in November. Don, K2KQ, is leading the group this year. The group will use the callsign J3A and QSLs will be handled by WA8LOW.

J68, ST.LUCIA. Fabrizio, IN3ZNR, will be active from here October 3-10th. He did not mention his callsign, but his activity will be on SSB all bands

with emphasis on the lower band. He will also be on the WARC bands, if hardware becomes available. QSL via home call IN3ZNR either direct (callbook address) or bureau. If interested in sked or want additional information, please get in touch with him at: in3znr+AEA-qsl.net

LZ, BULGARIA (160m activity planned). Wally, LZ2CJ, reports that he will be active in the upcoming CQWW DX SSB as a Single Op/Single Band entry on 160 meters. His QTH is at 1330m ASL, and his antennas will be: phased Inverted Vees to USA, 200m Long wires to Asia, Pacific and Africa.
If interested for skeds, send E-mail to: lz2cj@qsl.net

PALESTINIAN STATEHOOD. An AP report from Jerusalem states that in a upcoming speech to the U.N. General Assembly, Yasser Arafat will call for a declaration of Palestinian statehood regardless of whether there is progress in talks with Israel on a West Bank troop withdrawal by then.....

PIRATED PREFIX "1V6". Omari, 4L5O, wants to inform all radio amateurs in the world that "1V6" is a "PIRATED PREFIX". He mentions that some operators from the Rep. of Georgia do not like the 4L1 prefix but choose to use the 1V6 prefix. These are not a valid allocated callsigns.

QSL INFO AND NEWS.......
CORRECTION. Last week under "V2, ANTIGUA" we had the following listed as "Tom/N2TK V26AK QSL WT3Q" it should have read the following: Tony/N2TK V26AK QSL home call.

CORRECTION. Ovy, YC8VIP, from Ambon Island (OC-070), informs OPDX that VK4FW is NOT his QSL Manager. Only Steve, W6MD, is his QSL Manager. QSL only to Steve Busono, 1700E, 13th No. 14 OE, Cleveland, OH 44114 - USA.

George, W1ZT, has agreed to assume the QSL Manager job for Desmond Peters, ZD7DP, on St. Helena Island. He states that he has logs for all QSOs, so he will accept QSL requests for all contacts including those prior to this date. This should help speed the QSL process as the mail service to St Helena is by mail ship only. George's address is: George Johnson W1ZT, 30 Washington St., Beverly, MA 01915, USA

S9, SAO TOME & PRINCIPE. Chris/HB9CYV and Martin/HB9CYN will be active here October 26th through November 7th, as S92YV and S92YN, respectively. Activity will be on CW/SSB, all bands 80-10 meters and on the usual DX windows. QSL S92YV via HB9CYV (bureau or direct to new address: Chris Zeller, Jaegerstr.19, CH-8200 Schaffhausen, Switzerland). QSL S92YN via HB9CYN (bureau or direct to CBA). QSLs via bureau are preferred. If QSLs are sent directly to the home call addresses, please consider the postage cost in Switzerland. They are one of the most expensive in the world (2 USDs or 2 IRCs are needed for Air Mail to oversea countries (outside Europe!). Information about the Dxpedition will be available soon at the WEB page: http://ab5eh-lin.tamucc.edu/~hb9cyn
Also, the logs will be available on the same WEB page mentioned above just after the DXpediton.

V4, NEVIS ISLAND. "DOC" Michael Treister, M.D., W9NY, reports to OPDX that he will again be active as V47NS October 22-27th. His CQWW SSB Contest operation will probably be monoband 10 or 15 meters but will work 20 meters outside of the contest. He states, "This assumes that there is electricity on the island following the hurricane)". QSL via W9NY (older callbooks, W9NSZ is OK).

VP5, TURKS & CAICOS. Members of the North Florida DX Association (NFDXA) will again activate VP5 during the CQ WW DX SSB Contest. This will also be a Multi-Single entry using the callsign VP5DX. Operators will be Ron/N4KE, Jim/NU4Y, Jim/KC4FWS, Steve/AB4UF, Larry/W1LR, Al/WA4DRU, Frank/W3KT, Robert/W4WSZ and Gene /AA4US. QSL VP5DX via K4UTE. QSL other members' callsigns via their home calls. The operaton will take place from the Cottage of N4KE on Middle Caicos (IOTA NA-02).

I inadvertantly deleted my copy of the Voice of America's propagation
softaware called VOACAP. I've tried to download it from the VOA but their
ftp site is not responding. I've done alot of searching on the internet but
hits refer back to the original ftp site.
If someone still has a copy of it, I would sure appreciate having it sent
to my address.
Thanks in advance.

Sorry Tom the DXCC rules say no. Rule 8 is:
8. All stations contacted must be "land stations." Contacts with ships
and
boats, anchored or underway, and airborne aircraft, cannot be counted.
For
the purpose of this award, remote control operating points must also be
land based. Exception: Permanently docked exhibition ships, such as the
Queen Mary and other historic ships will be considered land based.

The complete rules are at URL:
http://www.arrl.org/awards/dxcc/rules.html

Strange he didn't ID as /MM or maybe he did??

I did hear Carl on occasion describe himself as MM. He was on an oil rig at sea. He himself said that he didn't know whether under ARRL rules he qualified as a VP8 contact.

3056. Age discrimination at General Motors/Delco Electronics (now Delphi).

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-28 00:00:00 UTC
From: Gary Lee Calvert <gcalvert@iquest.net>
Message-ID: <6uodj6ore1@news.iquest.net>
Source record: 27593

In the last weeks I have left... 73's de WB9SMX

I am posting to news groups, writing letters, and Emailing every one and every place I can to make the world aware of the age discrimination I endured at General Motors/Delco Electronics (now Delphi).

I hope you, your children, or grandchildren never have to experience what I have been put though.

My situation has become grave because:
I have been out of work for nearly a year now.
My unemployment benefits have nearly run out.
Family Social Services Administration says that my medications are not covered for calculating my welfare (never thought I'd be there!).
They also don't include the auto insurance that is now required by Indiana Law. Nor other needs like the taxes and fixing brakes on an old 92 mini van with over 120,000 miles and so-on. As a result my wife and I get a whole $10 per month assistance with $200 a week unemployment that is soon to be ended.
I have been an insulin dependent diabetic for many years.
The diabetes have caused a neuropathy in my feet and for several years and as a result I have taken medication to relieve some of the constant pain in my feet so I can walk.
I have had a disk removed from my lower back, and doing manual labor tasks like I used to is no longer possible.
These were not problems for my old job where most of the day was spent typing on a keyboard and RARELY working in the Lab.
Most disheartening is that my Son is in his second year at college and I have no way of helping him financially.
I expect that I will succumb due to lack of funds to buy medication or food after my charitable income from the government ends.

What little settlement I got from them was used in paying off all our outstanding debts. Like vehicle, mobile home, old school loans, taxes, etc..

I have sent my story to the large TV networks, but I am only one of probably thousands of stories they get. AND I am only a middle aged white male against General Motors/Delco Electronics (now Delphi) the largest purchaser of TV/Radio/newspaper advertising in the world.

How powerful this must make them feel and how nonchalantly they continue to act with impunity because of their financial strangle hold on any news organization that would hold them up for the world to see them as they really are.

They boast about all their contributions to charities, music/art organizations, PBS shows, etc. but they don't go out of their way to tell you what they do to an employee if he is getting older and has medical costs that use money from the "self insured" program managed by Blue Cross Blue Shield or another company.

The lawyers I hired at Kendall Law Office (Mr. Michael C. Kendall, Stephanie Jane Hahn #18674-64, and Jeffrey D. Hawkins #19387-49) in Indianapolis Indiana betrayed my written requests and the legal system failed to see that my case was heard by a jury trial. And they settled my case with no genuine way of maintaining an income, sufficient money, or retirement to continue to meet my need of surviving.

If you think your protected with the age discrimination act you better think again.

Details and proof are available at my web site for the remainder of the year http://members.iquest.net/~gcalvert/age1.html or until General Motors/Delco Electronics (now Delphi) intimidates my Internet Provider into unplugging my account.

General Motors/Delco Electronics (now Delphi) has succeeded in destroying my career by not allowing me to have the same opportunities and newer younger employees. As a software engineer it was imperative that I was allowed to work on new projects with new technology to maintain my skills as the newer younger employees did.
My skills are so minuscule that I can not even get a technicians job at half the income I used to have.

General Motors/Delco Electronics (now Delphi) delayed my settlement payment just long enough so I could not get into a class last January.
Even if I did get some more training, who would hire me with diabetes, a bad back, sore feet, and 50 years old? General Motors/Delco Electronics (now Delphi) wouldn't keep me why would anyone else?

Please don't send criticism unless you have read the documents and photos at my web site. http://members.iquest.net/~gcalvert/age1.html

If you know of anyone who is planning a career at General Motors/Delco Electronics (now Delphi), be sure to have them check my web site.

Now that this information is being sent out for the public to read I have the last of my affairs in order.

Thank you.

He IS currently in the Falklands. I've worked him a few times when he
signed /MM. From what I've seen, he always signs that when he at sea.

I do get it- every week, and the OPDX is a great resource. I was
simply pointing out the fact that the Daily DX is published "Daily."
Monday - Friday, I believe. FYI, the OPDX Bulletin is published once
a week on Sunday, not "every few days." There is occasionally a
special bulletin added for subscribers. I'm not a spokesman for the
Daily DX. I'm not even a subscriber myself, but I have seen sample
issues which Bernie posts from time to time, and recognize it as an
excellent resource. It's certainly the most timely source of what's
happening on the bands. It seems as though W3UR never sleeps, as I
see his call outs on the packetcluster seemingly 24 hours a day!

Heard him in a QSO last night. It sounded like he works on some kind
of platform (maybe an oil rig?). He was describing how it is quite
well anchored to the ocean floor but is still on the water. It pretty
much sounded like it is up to the DXCC committee to decide whether he is
truly /MM or not.

Can anyone tell me what frequencies are used by world wide cruising sailors? Firstly I know there are a couple ham-radio volonteers who keeps contact with cruising sailors, giving them informain about weather and more. Secondly, cruising boats use to establish nets where in certian areas where they keep each other informed.

Does any one know about these frequencies? In that case I appreciate a few lines to my e-mail box; pbsmd@ibm.net

3071. CQ DX - Scouts

Newsgroup: rec.radio.amateur.dx
Date: 1998-09-29 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.107b228ba4138dbd9896ab@news.planet.net>
Source record: 27608

Two events that are coming up this October that will allow the DX'er to interact
with the future operators of the world.

On October 10 and 11, the Morris-Sussex Council of the Boy Scouts of America will be hosting the Jersey Jamboree. Approx. 10,000 scouts from around the eastern part of the US will be attending. The special event station,
K2BSA/2, will be on the air during most of Jamboree and will allow the scouts
to talk (hopefully) with people not only from the US, but around the world,
propagation permitting.

The station will be on 40 and 20 meters, and if conditions permit 10 meters as
well. If you do hear us, please post to packet as this is a wonderful opportunity
to initiate the kids into the "wonders" of amateur radio.

Qsl via KF2TI. US stations, a SASE is appreciated, DX either direct or via the
buro.

The second Scout related event is the following week, and that is the annual
JOTA (Jamboree on the Air) The event is held Oct 19 and 20 and scouts from
around the world will be on the air contacting their counterparts in other
countries and people around the world in general.

Yours in scouting

Barry W2UP

Other methods that I know about are directly from me, and through the ARRL. I worded the message to see if anyone would tell me about anything else.

Everybody's got good things to say about WF5E, no one has said anything negative, it's cheap enough to be a GREAT bargain compared to doing it myself and much less hassle, so I sent off my few cards to him today.

To be honest, it sounded almost too good to be true, so I figured I'd ask.

WF5E's service was previously run by N7RO, and before him W3KT. I
started with W3KT in the early 70s. It sure beats spending the big
bucks for SAE + IRCS or greenstamp. For DXpeditions I still send
direct to include a donation to defray their expenses.

Like the other comments, I have used his service for a good while and
...it works. It is as Les says: Between direct QSLing and the buro.
Only yesterday I received a whole bunch of cards from his service w/
99% WARC QSL's I had sent to WF5E..

Didn't want to 'fight it' (the QSL hassle) like I did w/ DXCC.

He has a web page but the URL escapes me. I am sure a 'search' would
bring it up...

SB DX ARL ARLD039
ARLD039 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The Daily DX, The DXNS, The DX News Letter, The 425 DX News, Floyd, N5FG, Fabrizio, IN3ZNR, Serge, UA9LP, and Contest Corral from QST. Thanks to all.

CHINA, BY. Operators from Shanghai plan to be active as BI5X from Xiao Yangshan Island, from October 1 to 3. QSL via BY4BHP, P.O. Box 085-299, Shanghai 200085, People's Republic of China.

GLORIOSO ISLAND, FR/G. A report in the Megahertz Magazine states that Jacques, FR5ZU, will be active from October 7 to 30 as FR5ZU/G. Planned activity includes SSB and RTTY on all bands. QSL via JA8FCG.

SOUTH SHETLAND ISLANDS, VP8. Stan, SP3BGD, who is QRV until December 10 from the Polish Antarctic station HF0POL, is putting up a new antenna for 160m. QSL via bureau or via SP3SUN.

MACAO, XX9. Jon, WB8YJF, and Leo, K8PYD, are QRV as XX9TJF on 20 meter CW and RTTY. Their length of stay not known. QSL via home calls.

ANTARCTICA, KC4. Dave, KC4AAA, will be active on 14.243 MHz from 0000z to 0800z daily until about November 4. QSL via NC6J.

NEPAL, 9N. David, G4ERW, is QRV until November 7 as 9N7RW from Patan in the Kathmandu Valley. QSL via home call.

BERMUDA, VP9. Igor, US1IDX, will be active as US1IDX/VP9 from October 17 to 24. QSL via N5FG.

MOROCCO, CN. Gerald, OE8GNK, will be QRV from October 2 to 23 from Beni Mellal and possibly Casablanca. QSL via home call.

ST LUCIA, J6. Fabrizio, IN3ZNR, will be active between October 3 and 10 on all bands with emphasis on the low bands. QSL via home call, direct or bureau.

OMAN, A4. Mary, G0BQV, will be active as A4/G0BQV from October 21 to November 1. She will be on CW on all bands. QSL via G0BQV.

THIS WEEKEND ON THE RADIO. The VK/ZL/Oceania Contest, phone, and RSGB 21/28 MHz Contest, phone, are on tap for this weekend. Please see October QST, page 108 for details.

Source record: 27622

I have the week on October 12th off. I have been on HF for about 3 months now. Many people want a North Dakota contact. I am considering some Autumn camping and HF'ing and North Dakota is a possibility. How many people would like to make a N.D. contact on 10/17 or 10/18. If I get a good response, I will strongly consider changing my camping itinerary to North Dakota on those days.

3087. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6v1m3a$4tr@news.Hawaii.Edu>
Source record: 27624
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.dx

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Try http://www.pjwdesign.demon.co.uk/

There's a stand (may actually be the same guy as above) at many rallies
which does a lot of satellite TV stuff, but also sells PICs.

3097. Re: Any hope for DX on 6 meter in an apartment

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-03 00:00:00 UTC
From: "Lisa M. Keeton" <lmkeeton@foxinternet.net>
Message-ID: <3615d256.0@news.prostar.com>
Source record: 27634

Hi John!

Your chances of doing DX without a beam are obviously not
the best .. I guess it depends on how serious you are about
working 6m DX. As an apartment dweller (on the ground floor
too - YUK) I don't stand a chance without a big outdoor ant,
which I can't put up. I save the serious stuff for 'field trips', and
do local/repeater contacts from the apartment. But don't give
up on 6m DX just because of my experience! Get SOME kind
of ant up and experiment. You never know - they don't call it
the Magic Band for nothing.

BTW, I use a B&W AP-10 vertical for the home. It covers
2m thru 40m and is less than 6' long overall, so it's small
enough to mount inside one of those tall bushes surrounding
my patio (but is actually made to mount on a window, as it
was designed to be portable.) It's not optimum, but "a little
bit of something is better than a whole lot of nothing."

Good Luck!

Lisa KK7FZ

One solution is to operate portable. I lived in an apartment for 8-9 years & would pack a 6m rig, 3-el Yagi, 5' mast, and roof tripod in the back of a Ford Escort. (yes, I could still close the hatch<g>) Drove to a city park, it took about 5 minutes to hook the whole thing up & work all the stations I wanted.

It was the bottom of the solar cycle, so all the foreign DX I worked was two Argentine stations and the British Virgin Islands, but I must have worked well over 100 stations all over the U.S.. Stations up to 150 miles away could be worked when the band was completely dead.

Mobile operation also works well. A real 6-meter antenna is obviously best, but believe it or not, a 2m 5/8 mobile antenna will work fairly well on 6.

Random-length wire antennas can also work. I've worked a handful of Cuban stations, Costa Rica, and a couple of California and Oregon stations (and heard Europe!) using a 135' center-fed antenna and 10 watts.

Go for it!

Source record: 27643

There are probably several designs for "hidden" antennas you could use. If need be, get some wire and plant hangar hooks and string up one near the ceiling.

About 1979 or so I was living about 30 miles north of Springfield, Missouri. One afternoon I was getting the characteristic lines on the TV indicating skip. Using just the telescoping rod, I was able to pull in SIXTY channels that afternoon, including 3 educational stations in New York state.

A couple of months ago from Kansas City, about 95 miles from Springfield, I was able to pick up EVERY TV station in Springfield, including all the UHF stations, just as clear as a bell. Studio quality. No snow at all. Unfortunately, I didn't have the presence of mind to check the FM band or VHF/6 meters. That TV was using a set of $19 rabbit ears from K Mart.

Needless to say, transmission characteristics are different from reception, but you can do a heck of a lot on minimal setups.

Check your local library for books by William Orr, W6SAI. He's got some great ideas for apartment dwellers. Awhile back I saw a book about antennas by Joseph Carr which looked really good, too.

HI PS. Help some young one along the way!!!!!!

Er, Yes. I have to scrape around and find substitute tubes, circuits, string, etc because I have not been earning for a few years. I find the discussions, tips, hints on these groups very helpful. I also learn a lot of "abstract" stuff like it's silly to use 6L6s just at the moment; but I know there are 101 tubes I can use instead, which have not been laid upon an altar by hi-fi magazines.

And suchlike.

In a previous article, lmkeeton@foxinternet.net ("Lisa M. Keeton") says:

>Hi John!
>
>Your chances of doing DX without a beam are obviously not
>the best .. I guess it depends on how serious you are about
>working 6m DX. As an apartment dweller (on the ground floor
>too - YUK) I don't stand a chance without a big outdoor ant,
>which I can't put up. I save the serious stuff for 'field trips', and
>do local/repeater contacts from the apartment. But don't give
>up on 6m DX just because of my experience! Get SOME kind
>of ant up and experiment. You never know - they don't call it
>the Magic Band for nothing.
>
>
>Good Luck!
>
>Lisa KK7FZ
>

I live in a second floor apartment in a 2-story house. Fortunately, my landlord will let me use the whole yard for antennas.

I strung a 6-meter dipole across the ceiling a couple years ago and surprised myself by working quite a few stations including the east coast from Illinois with a quarter watt on 6 meters during really good openings. If I could hear them, I had a chance of working them.

Usually what I do now for 6 meters is put up a temporary 3-element beam on about 20 feet of collapsible mast. It takes maybe 15 minutes to set it up or take it down. That beam got me many good DX QSO's on 6 meters this summer (by DX I mean anything outside my own grid square!)

Every once in a while I put my equipment in my car and head for a nearby hilltop when 6 or 2 meters is really open.

I'm still spending money on it, so I better be enjoying myself.

Seriously, I just bought my first HF radio, a Ten-Tec Scout. I
consider it motivation to upgrade, since with my Tech + licence
is a bit short in the HF privileges.

Today I built my first antenna, a long wire approximately 150 ft long.
Tomorrow I contemplate a 10m vertical. This to give me something
to do on the air while I try to relearn enough code to be
intelligible.

Am I enjoying myself. I don't know, I am too busy to notice. :)

This radio works and looks well. It has no wear marks on its face. I
will not state mint condition because that phrase means an in box
condition which has never been opened. The radio does however look close
to new. It is a 4 year old radio.The price is $1250.00 Mike.....
e-mail to above address. Thanks

dunno yet. i withdrew for almost ten years, gettting tired of dealing
with appliance operators, shit neighbors, and cb-ham operators.... guess
it's a sign of the times. now i'm getting involved again, dusting off the
tube transceivers and stringing up dipoles. i hv no interest in the
biggest/best/powerful. just having some basic fun.

I got my licence in 1962. Have been active for 3 years and then the kids, the job, the travels forced me to stop.I retired early with one objective in mind...get beack my license and experiment again with what can be experimented in today technology by a simple technician. I then restarted two years ago focusing on antennas. Now I believe I understand 10-20% of them but anytime i make a QSO and talk about my experiments, tests,achievements and disappointements and I exchange my technical views, I get a lot of attention and many OM's express their satisfaction in hearing QSO's talking about technical experimentation against the many QSO's just talking about the weather.....
Our hobby should get back to its initial objectives and this will by sure attract lot of yungsters.

All the best Anselmo, HB9ICK- IZ3BGJ

Folks,

Just yesterday I ran into one of those things that give newcomers the impression that HAM radio operators can be elitist and exclusionary -- I was on the 14,247 kHz DX net on 20m, going through the rotation as usual when I got really slammed by one of the net control guys -- just for giving the DX station my name and QTH! It wasn't as if I was conducting an extended rag-chew QSO either -- The whole thing was over in less than 30 seconds. Apparently, it is only acceptable to give call signs, signal reports and 73's to DX stations on the DX net. Nevertheless, the language and tone in the rebuke was so completely out of proportion and uncalled for that I won't repeat it here. I have only been back in amateur radio for a month (after a 25 year hiatus), and it really gave me a cold feeling to think that other people just getting into HF might get this kind of treatment as well. People have to remember that lives don't depend upon the procedures used to work DX... We should be working towards maximizing the cooperation and pleasure of all amateur operators, or else we're all going to lose out. If I hadn't known that this was something of an aberration, I would have developed a bitter feeling about ham radio in general and HF in particular. As it was, it soured the experience for the rest of the day. I realize that nerves were a little ragged due to the QRM problems stemming from the California QSO Party, but that doesn't excuse rude behavior that is detrimental to the hobby as a whole.

Curt,

Don't let a single twit get to you. There are many more like yourself that would rather do more than exchange calls and serial number. A bit more rag chewing would do us all some good!

Ignore the moron. Enjoy the hobby the way YOU want to.

BID: $OPDX.377
October 5, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W2FXA, N2WB, WB2RAJ/WB2YQH & The 59(9) DXReport, N4GN, W4WX, N5FG, KJ9I, K8PYD, K8YSE, W0YG, F6AJA & LNDX, G4BUE & DX News Sheet, HB9HFN, HK8RPV, JA4AHV, LU1DZ, PA3GBQ, PA3CRA, SP9MAX, UA9LP, VE2NW, VK1ZL, YB5QZ and 9K2HN for the following DX information.

4S7, SRI LANKA. Mitsunori, JA4AHV, reports to us that he will be here October 20-30th, as 4S7AHG or 4S7/JA4AHV. Activity will be mainly CW on the low bands 160/80/40 meters. QSL to: M.N Sako, PO Box 59, Matsue 690-8691 Japan (or via bureau).

4S7, SRI LANKA. "The 59(9) DXReport" states to look for Ron, 4S7RO, to be active on 160 meters in October with an Inverted L antenna.

4U1UN, UNITED NATIONS HQ. A 4U1UN surprise appearance happen this past weekend on 12/15/20 meters. QSL via W6TER.

5J, BOCAGRANDE ISLAND (Colombia). A group of 12 Colombian hams will be active from here October 10-11th. They will have two HF stations on 20 and 40 meters using the callsign 5J8IB on SSB. No other details were given. QSL via HK3DDD.

5U, NIGER. The "DX News Sheet" reports that Dan, 5U7DG, is now active after his 5UDAN licence was revoked. He is using a long wire antenna until he gets a TH6 beam up. He does not like pile-ups. QSL via K4SE.

9G, GHANA. Steve, PA3GBQ, reports he will be here October 15-30th, for a job. He will be traveling all over the country, but if there are any possibilities, he will be active with the same call as before, 9G5BQ. Activity will be on SSB/CW with just a 100 watts and wire dipoles. QSL via PA3GBQ (CBA 1998 or bureau): Steve van Lieburg, Stresemannplaats 27, 3068 JL Rotterdam, The Netherlands.

9H0, MALTA. Just a quick reminder to look for the group of 24 Dutch operators that will be active from here from October 4-17th. Please refer to OPDX.375. Activity will be on all HF bands except 160 meters. Each operator will use their own 9H3 callsign, but a special club callsign 9H0VRZ will also be used.

DX NET REACTIVATED. It has been announced that Jim, VK9NS, will be reactivating the "Triple Two Net". For the time being it will be run on Saturdays and Sundays at 0530z on 14222 kHz as in the past. As conditions improve it is hoped that other net controllers are able to run this net on weekdays, but not on Mondays as this is the YL Triple Two Net. There is no word on the re-commencement of the HIDXA net which in the past was on Sundays at 0400z on the same frequency.

E31, ERITREA (UPDATE). The good news is Jacky, F2CW, was active this week and continues to be active as this bulletin was being prepared. The bad news is that the TS-50 he received has a broken VFO. It was reported, "he can't operate above 22 MHZ in SSB, and the power he is using now is 100w. And about CW, he can operate all bands but the power is from 10w to 50w only." KEEP LISTENING.....
NOW FOR THE DISTURBING NEWS! The members of the "Space A DX Group" to Eritrea was informed this week that each operator must pay $500 for his operating permit, and they could not operate as a group with one license. This will cost the DXpedition $10,000 ($500 X 20 operators). They will lose several of their operators if this is not changed. The group has requested assistance on this matter through the Eritrean Embassy in Washington. As you can see, this group is in real need of donations or cuts may take place. For more information, check their Web pages at: http://qsl.net/eritrea or http://pagus.it/E31DX
OPDX InterNet Subscribers will receive the complete press release by Bruce, WD4NGB.

FR5/G, GLORIOSO ISLAND (Update). Zareh, VE2NW, reports to OPDX that Jacques, FR5ZU, will be operating SSB only from Glorioso Island from October 6-30th. QSL via VE2NW. He also mentions that he will try to run Jacques about 0200z on 14256 for NA stations. Otherwise, Jacques will be operating solo.

FW, WALLIS AND FUTUNA. Cedric, HB9HFN, reports that since he had great fun and success last February with his DXpeditions to A3 and 5W (A35FN and 5W0FN) he is preparing to go to Wallis and Futuna next year. Activity will take place February 23rd through March 8th. He will be active once again especially for Europe, mostly on CW and on 80-10 meters. This will be a one man DXpedition unless someone with DX/contest experience is interested in going with him. Cedric has put up a WEB page where you can find more info (geography, schedules, material, logs, qsl, flight plan) about the DXpedition at: http://www.qsl.net/hb9hfn/pacific99.html

HO3, PANAMA. Louis, KG6UH/HP3XUG, reports he will use the callsign HO3A during the EME Contest weekends in October and December. It will also be used in the CQWW DX SSB Contest this month and for the ARRL 10 Meters Contest in December. Louis also likes to keep his ears glued to 6 meters during the TEP hours while at home (he also listens around 144.200 during

the TEP hours). On HF, he mostly listens around 24900 kHz during his local morning hours (1100-1500z) and in the evenings (2200-0300z). If there is not much activity, he listens mainly around 18080 kHz, or around 10104 or 7005 kHz later in the evenings or in early mornings. See QSL info below.

LU1, SOUTH SHETLAND. The station LU1ZI is located on the Argentine base Jubany on Mayo Island (King George Island, Lat 62 14 South, Long 58 38 West, Grid Locator GC07QS). There are two operators that are active mainly on SSB. The QSL information is: Direccion Nacional del Antartico, Cerrito 1248, Buenos Aires, Argentina.

OX, GREENLAND. Jorgen, OZ8AE, will once again be active from here, this time from November 11th to December 2nd, as OX/OZ8AE. Activity will be from Groennedal (southwest part of Greenland) while visiting Kim, OX3FV. He will be active on 160-10 meter CW and he will also be in the CQWW CW Contest as a Single Op/All Band entry. QSL via home call.

QSL INFO AND NEWS.......
Rick, NE8Z, informs OPDX that he is now the QSL Manager for HC1HC and HD1HC. All past, present and future QSOs can be confirmed via NE8Z.

New Address for KG6UH/HP3XUG. Louis, KG6UH/HP3XUG/HO3A, reports that with the closures coming over this next year of the U.S. Bases in Panama, he is required to open a new APO address which will be valid until late 1999. The current address, PSC 61 Box 324; FPO AA 34061 will cease to forward after February, 1999. The new address that is valid now: CAPT Louis N. Anciaux, USN(RET), HP3XUG/KG6UH, PSC 1 Box 57, APO AA 34001-0057. His local Panama address remains valid, although it is quite slow at times: CAPT Louis N. Anciaux, USN(RET), Apartado 417, David, Chiriqui, Rep de Panama.

Hamad, 9K2HN, reports that he has sent all the bureau cards received during the period from July 1st to October 1st (1998), for the following: 9K2HN, 9K2F, 9K5HN, 9K0A and 9K2HN/p. Direct cards are sent out week by week. If you are still waiting for QSL card that you have sent him before 1 September 1998, please let him know!! His E-mail address is: 9k2hn@moc.kw

Leo, K8PYD, reports that all VR2/K8PYD, XX9TYD and XX9YD are QSLed to K8PYD. He also mentions VR2/WB8YJF does not exist (...yet). XX9TJF QSLs go to WB8YJF. Leo states he wished he could have stayed longer in the Far East. He also mentions that he and WB8YJF made approx 925 QSOs during the RTTY contest, using XX9TYD. XX9TYD made approx 700 QSOs outside of contest and XX9TJF made approx 1000 QSOs outside contest.

RTTY ON ZONE 17. Serge, UA9LP, reports to OPDX that he is on every day operating RTTY on 80-10 meters. Ther were no times on bands reported. He does provide an E-amil address of: ua9lp@yahoo.com. QSL ONLY DIRECT to: Box 698, Tyumen 625000, Russia (No CBA 93-98).

SN20, POLAND (Special Event). Look for special event station SN20JP to be active from Cracow to celebrate the 20th anniversary of Pope John Paul`s II pontyficate. The station will be active 160-6 meters on all mode from October 1-31st. QSL via SP9PKZ.

T8, PALAU. Operators Dave/KJ9I, Rudolph/NF9V and John/NZ9Z will be active from December 8-17th, as T88II. Activity will be 160-10 meters with a emphasis on the topband. QSL via KJ9I (Contributions appreciated): David Schmocker, N7298 County Trunk Highway F, Oconomowoc, WI 53066-9040 USA (E-mail address: DSchmock@Cellular1to1.com)

VK9C/VK9X, COCOS-KEELING AND CHRISTMAS ISLAND. Charlie, W0YG, wants to remind everyone that he and George/W8UVZ will operate from Christmas and Cocos Islands from February 6, 1999, until February 20, 1999, spending a week at each location. Emphasis will be primarily on the low bands, WARC bands and RTTY. Some 6 meters activity will be attempted. However, the purpose of the DXpedition will be to give as many of the deserving low band contacts as possible. A Battle Creek Special and beverages will be used for 160/80M. Callsigns have been applied for and will be announced as soon as they are issued. Every effort will be made to be on top band each day for both sunset and sunrise openings into the States. Please QRX on schedule requests as Charlie is sure that if there is an opening and the tropical QRN subsides, they will work you.
SPECIAL ADDITIONAL INFORMATION. Charlie reports to OPDX about his Z2 and A2 operation. He states, "I worked a bunch from Z2 but never got the chance to operate on 80/160M as a DX mobile signal on those bands is equivalent to a dummy load. But an unforeseen bout in the bush with 'malaria' cut short my operation from Z2 and stopped me from further operating from A2 when I went there..... Sorry but I just couldn't do more. That malaria is bad stuff." Charlie reports he will again try for a license on his next trip and states he will attempt to do a better job.

VP9, BERNUDA. Gene, W2FXA, will be operating as W2FXA/VP9 in the Devonshire Parish, from October 25th to November 2nd. Activity will be on all bands 80 thru 10 meters including the WARC bands CW and SSB. QSL to home call.

VP9, BERMUDA (Rare Parishes). Igor, US1IDX, will be active from here as US1IDX/VP9 from October 17-24th. He will be staying at The Palmetto Bay Hotel located in the Smith`s parish. Igor will be active on the usual DX frequencies. He will operate as US1IDX/VP9/m and try to operate the VERY RARE Bermuda Parishes for those working on "The Bermuda Award". The award is issued to those who work ALL 9 parishes (districts) of Bermuda. He will arrive at Bermuda International Airport on the 17th at 1935z, and after finishing passport control (abt 15-20 min. later) he hopes to be active as US1IDX/VP9/m from the rarest parishes, St. Georges and Hamilton on his way to Palmetto Bay Hotel. Please watch during this time on 14195 kHz. Also, during the CQWW SSB Contest, Igor will very likely be active using his contest callsign US1I/VP9. While on Bermuda, Igor will be attending an annual dinner banquet as the World Wide winner of the 40th Anniversary Bermuda Contest (winner for the second year in a row). All QSLs go via N5FG: Floyd Gerald, 17 Green Hollow Road, Wiggins, MS 39577, USA (SASE please).

WP2, ST. CROIX (Update). Between October 19-27th, members of the Florida DXPedition Group (FDXPG), Bill/W4WX, Clarence/W4CJK, William/N2WB, Chris/VE3FU, Jim/AA9TK and Ernie/W5OXA will be Multi/Single entry in the CQWW SSB Contest from St. Croix. They will also be active on all bands and modes, including RTTY, SAT and 6 meters, before and after the contest. WP2Z will be used during the contest. QSL via home callsigns and WP2Z via KU9C.

XX9, MACAO. From a press release by Tim, N4GN, both OH2PM (XX9TR) and OH2BH (XX9TZ) have been active this past weekend from Macao as they prepare their station for the upcoming contest season. Also mentioned was a message from Martti, OH2BH, stating "that the recent BT2HC and UE0LEZ special event stations were a tremendous success. They received quite a bit of local coverage in both the television and print media with ham radio being portrayed in a positive light. BT2HC alone made more than 4200 QSOs. Let's hope this enthusiasm for ham radio spreads into other areas of the region!"

YE5, GALANG ISLAND. Operators YB5QZ and YB5PD will be on IOTA OC-075 to celebrate the 27th Anniversary of Batam Industrial Development Authority. Galang Island is an ex-rufugee camp of Vietnam in 1979-1996. Activity will take place October 23-25th using the callsign YE5B. This station will also participate in the CQWW SSB Contest. Outside the contest there will be an emphasis on the WARC bands. They will be using CW, SSB and RTTY on 15/20 meters. QSLs for YE5B go via: Erizal M. Isa. YC5TML, P.O.Box 154, BATAM Island 29400, Indonesia. For information about Batam Industrial Development Authority and Galang Island look at: http://www.batam.go.id

ZF, CAYMAN ISLANDS. Bruce, N6NT, will be here while building a new house, October 11th through April. Look for him to be active as ZF2NT. QSL via N2AU.

ZONE 2. Look for VO1MP and VO1MX to be operating from Point Amour Lighthouse, Labrador, to activate Zone 2 as VO2CQ during the CQWW SSB Contest. Before and after the contest (between October 21-25th), look for them as VO2ZZ. Their activity at this time will be mainly on CW 160/12/17 meters. QSL via VE3FU.

Yeah but joining a 'LIST' to get to work a DX station through an intermediary
self-styled "RADIO GOD" like that is no fun anyway.

How BADLY do you want to work a new country?
If it means licking that bastards jack boots, I don't NEED to work the stinking
DX! I would rather wait and take my chances to work the DX the REAL way.

Some of those "DX NETS" with a control operator, sound as phoney as the County
Hunter QSOs where each station imagines they gat an RS "2-2" report from the
other guy and the relay station confirms it as a good QSO where in actual fact
they can't even hear each other at all!

HELLO? "SEVENS COME NOW - BEGINNING WITH ALPHA ONLY!!"

Funny you should mention that. I've been very quiet on 2 metres in the
UK for many years but in July I was near Kendal on holiday and thought I
would ask after an old G3 friend so I made a short call through the
local repeater.

Three people came back to say that you get funny types using the repeater nowadays, who haven't paid lately.

In spite of stories about Scottish parsimony, I think it is safe to say that passers by are VERY welcome to use Scottish 2 m repeaters and are not expected to pay.

Evidently the comradehsip we have been used to in amateur radio is no longer all-pervading. Now get off my bandwidth.

I just got in to the hobby, not on the air yet but I passed the no code tech tests. and am waiting for a call sign.

I got an HT and have been using it as a scanner and listening to the nets on 2 meter and 70 cm. I'm looking at a booster for the car and further down the line a base or repeater at home, that is far off though.

I'll confess I have worked a couple on lists or nets. Now I stick to
working the pileups.

The nets such as the 14247 net ARE spoon-fed DX. But when Graham ZL9GD
was active, working him on 40 (even on a net) was tough. The list runner
was not being very helpful. I got lucky and actually worked him, and
then it didn't count for DXCC (he was operating from a boat).

I tried and failed 4 times to work VK0TS on Jim Smith's net. Every time I
made it onto the list, either Tom couldn't hear me, or I couldn't hear
him. The one time he was about S7 or better here, I didn't make it onto
the list.

You won't find the likes of 3Y0PI, VK0IR, AH1A, etc. on any DX net or list.
If you want the REALLY rare ones you will have to slug it out in the
pileups with everyone else.

73, Zack W9SZ

Hi John

Well, to answer your question as quick as possible. YES !
I am still on the air, first licensed in the early 1960's. Been
on the air ever since. I still build some gear, but not as much as
I used to. I have a shack full of Heath kit gear that helped teach me
soldering techniques, as well as trouble shooting. I enjoyed it so
much that I did make it a career. Just retired after 34 years as
a communications/radio technician. Worked on UHF and VHF
radios, handheld, mobile, base stations, repeaters etc. Also was
involved in data communications.

I won't begin to think that I could build a solid state SSB multiband
transceiver from scratch, but I do enjoy building regulated power supplies
and various shack accessories as well as various antenna's.

It was and still is a GREAT HOBBY, and the interest even put
food on the table and clothes on our backs. We, being my wife
and daughter.

I think we get out of a hobby, just exactly what we contribute
to it. I have had the pleasure of making friends all over the world
via HF on many different modes. I hope to continue on doing
so for at least another 30 years. I'm 55 now, so there is a good chance.
Not to mention all the new friends I have made by helping instruct
during the Ham Classes every year to help others become Hams.

As far as getting on the air, I do every day. Even if it's just for a quick
single contact. I also put some vintage gear on the air (made in 1943)
on November 11th. Of course it is on CW, and I issue a special colour
certificate and QSL card for anyone brave enough to have a 2-way contact
on 40 meters with me. I take great pleasue using that particular piece of
equipment (an old army WW II # 19 set) as it is also 55 years old.
We both still function, after all that time.

Hi Curt,

I've noticed similar things with some of the various nets and some operators in general. Personally, I never use the DX nets, I'd rather work them on my own. Anyone can work DX if the guy is waiting to hear you. If you can't, you'd better be thinking of a new antenna system. However, in the support of these nets, they do tend to lesson the QRM on the bands by keeping things a bit more orderly. I've learned to just ignore the attitudes of some of these people. I think that maybe a lot of them are bitter old men (not to say that all old men are bitter, hell, at 47 I guess I'm considered an old man HiHi) who long for the good old days of tubes, crystals, AM and resist change and things they don't personally like at all costs. For instance, this last weekend during the Cal QSO party, on every band I operated someone would show up and throw a carrier on top of my cq's. Since I have a modern radio with auto notch they weren't very successful in bothering me but they might have chased away a few trying to call me. I'm sure it wasn't directed at me personally since I've never made an enemy on the air (that I'm aware of). I'm sure it was just some dork who doesn't like contests since he's no good at operating that mode and figured that he'd single handly run everyone off the band. It didn't work. The contest continued without his approval. Probably someone who tells the same story to the same guys on the same frequency at the same time everyday and just didn't know what to do for and entire day without his 'sked'. Pretty sad person in my opinion! I don't understand it anyway, everyone knows when the contests are (if they read QST) and could easily make arrangements to move their skeds way 'up' the band where most contesters don't go anyway. Just arrogance and stubbornness in my humble opinion. A few contests ago I heard one old coot literally screaming at someone to move off 'his' frequency. The poor guy eventually did, only to have someone else move in a bit later and start calling cq contest so he gained nothing! When there's a contest, the bands are crowded, get over it guys!

Jim
Call withheld to avoid future carriers that might be directed at me personally

John OM,

I am happy to answer this question. YES!
After 43 years of being continously active on the air, I am still of
the opinion that ham radio is the world's best HOBBY (and I have a few
others to compare it with, too). I am on the air daily, CW mobile, and
will be back on from my (new) home QTH as soon as I get my tower
re-planted and the HF arrays back up on top. I'm a CW op mostly, but
enjoy FSK too. I run homebrew XMTRs and RCVRS as well as older gear (in
my experience, homebrewing has never been easier, cheaper, or more fun
than it is today, contrary to what I hear from those who do not engage
in it). Also, there are an awful lot of excellent ops out there, which
(still) makes ragchewing such a pleasure. CU on the air.

73,
Don, W6JL

3128. 1998 Most Wanted List?

Newsgroup: rec.radio.amateur.dx

Curt,

That's the problem with most DX nets--only interested in a 59 and a QSL. I'm not knocking that, but if you want more, try calling CQ or look for DX stations other places on the band. Seems like the phone pile-ups have been rather unruly lately. Try CW--it's a bit (just a bit at times) more civilized.

From the Ohio/Penn DX Bulletin No. 377:

E31, ERITREA (UPDATE). The good news is Jacky, F2CW, was active this
week and continues to be active as this bulletin was being prepared.
The bad news is that the TS-50 he received has a broken VFO. It was
reported, "he can't operate above 22 MHZ in SSB, and the power he is
using now is 100w. And about CW, he can operate all bands but the
power is from 10w to 50w only." KEEP LISTENING.....

The E31AA is a one-man operation, qsl via ZL3CW, op is Jacky. E31DX is an upcoming dxpedition with as many as 20 ops according to the OPDX Bulletins.

Well, I patronized them numerous times before they moved to the new, smaller (horrible) quarters where you couldn't see or do anything. No wonder people would not go there. It was terribly small and they had almost nothing you could look at.

I was sorry to see it go, but are you sure that you are laying blame on the right source?

MRC was a great shop back when they allowed the meetings there, the library was great, and the store was easier to shop in.

The free parts exchange/magazine exchange was a great heolp to me, and the TUBE BANK was an awesome idea!

If only SOMEONE in the DC area would maintain a TUBE BANK now, I would certainly contribute to it and use it!

I was just sorry they had to move it from behind the Toyota dealer. After they opened the new place I only went in once. That was enought o put me off!

I will forward your comments to the DC BOATANCHORS mailing list and see if others have comments.

I truly miss not being able to operate like I did when I was first
licensed. The enthusiam has not waned, but the QTH has. Since moving
to Virginia, I have only been able to operate during FD. I love it, but
it isn't ragchewing, and that is a great part of the hobby for me. I
miss the all nighters working into Asia and Europe. I miss sharing
historical events with people from other walks of life. I hope to be
able to someday move into a QTH that I can at least string a wire up.

Exactly! As new (6 months, not counting 20 years as a SWL and wannabe ham) as I am to this hobby, I can tell you that it is much more fun to grab that rare DX at the bottom of the solar cycle on 6 meters. That is a challenge. There are a lot of us out here, even pimply faced newbies barely out of school (mea culpa), who retain the old ham values. Less is more. Skill counts far more than technology. Courtesy and honor are fundamental. "Problems" and gear failures and fixing them are the grist for the mill of "improving the radio art." I'll take my old Drake and channellized FM 2M mobile and some patience and ingenuity over a 160M-70cm all-mode, PC control, LL amp, and beams on a 1/2 wave tower. Contests and $4000 radios are for Type-A Jones-keeper-uppers with little joy in the hobby. Imagine, you can still get on the air DX and then some for 300 bucks and some brains and sweat!!! Amazing! Sssssh! Don't let KenYaeCom and Bill G. hear it!!!

Judging from the size of the pileup on 10m this afternoon, I qualify as DX for Europeans...

1. If you're in QSO with someone, and someone comes on frequency and asks if the frequency is in use, ANSWER THEM!

I found what sounded like an open frequency. But knowing the popularity of 10 meters with QRP and mobile stations (and the sometimes strange propagation), I asked "Is the frequency in use?" and waited 5 seconds for a reply. Then asked & waited again. No response.

Called CQ DX. A bunch of Europeans came back. I answered a G3, and we completed about 3/4 of a nice, pleasant QSO.

Then, someone began shouting my callsign and "QSY QSY QSY THE FREQUENCY IS IN USE!" - over and over again - making it impossible to copy the G station. I had to give up and QSY to CW. (and leave a disappointed pileup of other callers) If he was using the frequency, why didn't he answer when I asked if there was anyone there??? Apparently the frequency-ownership syndrome that's ruined 75 meters is now affecting 10 as well.

2. The intruders are getting bolder.. one answered my CQ down around 28.340. At least I assume "349CRZ" is not a legitimate ham station - if it is, I apologize to him!

3. If you haven't tried 10 meters lately, you should! Fantastic propagation; the UK Novices (limited to 3w QRP) have been bombing in around 28060 (their CW is better than many U.S. Extras...); Russians as far east as UA6 are coming in; and even YB0AI was making it over the pole to Tennessee this morning!

Hi Doug:

I have had similar experiences many times. I presumed that it results from propagation irregularities - i.e. 2 minutes into transmitting, your signal pops up out of the QRN during his exchange, and he thinks that you just began. Sometimes when propagation is quirky it may pay to listen for longer than normal before calling QSL too. Also, send QSL very slowly if you are a fast op so they can understand it. Food for thought anyway. Regardless, I compliment you asking QSL _twice_, a rare occurance these days and very much appreciated (by me).

> you just began.

Highly unlikely. If it was like you assume, then the other station must
have been run by a deaf or immensely stupid operator, if that guy not
realized, that the interfering station was not just starting but in the
middle of an ongoing contact.

> Sometimes when propagation is quirky it may pay to
> listen for longer than normal before calling QSL too. Also, send QSL

I guess, he was talking about a phone QSO, not a CW one. But i dont think,
that blasting a "QSL?" would resolve anything. I understood, that "Isse
frequency in use" would be

dadadidah didadit didahdidit dididadadidit,
not
dadadidah dididit didadidit dididadadidit,

which I understand as "do you acknowledge?"
or more commonly "did you copy properly?"

> very slowly if you are a fast op so they can understand it.

If you make the second dot of your S extra slow, then he might

> Food for thought anyway. Regardless, I compliment you asking QSL

I have heard this situation, during an Es opening, where the
propagation changed and a frequency that seemed clear suddenly has a
QSO on it. And yes, the guy on the other end decided I had
intentionally called CQ on an occupied frequency & began screaming at
me.

However, as you say, if the operator being interfered is paying
attention he'll realize what happened & not scream "QSY". One is not
entitled to an interference-free QSO - just one free of *intentional*
interference...

>> Sometimes when propagation is quirky it may pay to

Yes, I was talking about a phone QSO - though I have seen this happen
on CW too! I would hope that, if one is in QSO and hears a short
transmission on top of the guy you're working, that you would at least
send *something* (on CW, I often use "AS" - on phone "standby") to let
the guy know you're there. Even if it's sent in CW too fast for you
to copy, or on phone in a language you don't speak.

I dunno. I get tired of hearing the constant "QSL via?" or "call?" sent on top of the DX station during pileups.

Maybe that's because you don't understand the reason for it, Mike.
The driving factor for many HF operators is the DXCC award. Last
nite, on 15 meter CW, I worked 423 stations in Europe in about 3
hours. A few probably called for pileup practice, but most of them
just wanted a contact for a 'new one', another QSL card. I probably
worked 95% of the stations I could hear, but I didn't work everybody.

I wouldn't have had many, if any, meaningful conversations if I had
spent a half hour per contact, instead of 20 seconds. And the end
result is all the same. Nobody called me, they called my QSL card...

They get a new one, I get warmed up for the next CW contest.
We are all happy. Nothing cold about that.....

Source record: 27693

I'm rather confused - worked HF0POL during the CQ WW RTTY test a few days ago. My logging program insists that HF0 is a Polish prefix, but my big map on the wall says it's South Shetland Island.

Given that the exchange he sent also included CQ Zone 13, I'm leaning in favor of South Shetland. Anyone know for sure? I also have SP3SUN as the QSL manager. Is that correct?

Tnx & 73,

-Marty KI0LO

It depends on what each station wants to do. If it's a big DXpedition or even a little one where the op only wants to hand out "59/599" and that's the only thing the other stations calling want, then everyone is happy. Nothing wrong with that.

It doesn't always work out that way. Remember 9X5HG? It sure was fun to work him - and even more fun to listen to the stations who weren't working him.

HF0POL is definitely on South Shetland. QSL via SP3BGD per the
operator Stan's instructions. The "HFA - HFZ" prefix block * IS *
allocated to Poland, which is why your logging program is being
uncooperative. It's not taking into account that HF0 is a Polish base
in the S. Shetland Islands. BTW, I've seen SP3SUN listed as a QSL
route, but got the SP2BGD route directly from the operator on
28-Sep-98.

Just received my first electronic QSL, from G3UDA for a QSO yesterday morning on 10m. A rather large .JPG file attached to an email, it's rather grainy when printed full-page but actually quite good when printed QSL card size.

I'm of mixed mind of the advisability of widespread adoption of this. I suppose for major DXpeditions where thousands of QSLs will be requested, most only to qualify for DXCC endorsements, the development of electronic "QSO credits" to satisfy DXCC checkers will save a lot of effort and money. But those little cards are a slice of the other guy's country you usually don't learn of during the QSO, I would hate to see them go away altogether..

Hi Sig:

Thanks for the comments. Yes of course I meant QRL, not QSL.

When YOU finally get that Extra license, you too will be allowed to make typo mistakes. And, if you become a FISTS member, they will be graciously tolerated. I actually try to give all hams the benefit of the doubt when QRM occurs, and that was the spirit of my message. Of course I forgot, you are from NY and operate on VHF, where rules of courtesy may not apply.

Hi Doug:
Thanks for the comments

I agree. I was just trying to point out that sometimes you can get
interrupted in the middle of a QSO and in the heat of the moment make
the wrong assumption about the QRM. Also, sometimes one may not hear
the QRL?, or it might be sent too fast to understand, or the rest of the
sudden QRM might be too fast to understand, thus preventing the other
ham from knowing if it is the beginning or middle of a QSO. On CW I
always try to send QRL? twice - the second time at slow speed. Just my
$.02. Regardless, I think Herb is a very considerate op.

After re-reading the original text, it was obviously a phone QSO. Being
a CW only op, I made an erroneous assumption. And yes, I totally agree
that one should send something, preferably something polite ;-)

3171. Heard Island Books

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-08 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.1086cd4c7d8849ec9896b2@news.planet.net>
Source record: 27708

I still have 15 copies of the book VK0IR, Heard Island, written by Bob Schmieder, KK6EK. This book chronicles the 1997 Dx-pedition that broke all the records and defined a new spirit of collective pride in Amateur Radio.

Copies and $20US each to shipping. All monies going to the Heard Island DX fund.

If you are interested, let me know, as they are going fast

To all radio amateurs

SB DX ARL ARLD040
ARLD040 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, The Daily DX, DXNL, QRZ DX and Contest Corral from QST. Thanks to all.

TUNISIA, 3V. Albert, F2KN, is QRV as 3V8BB until the end of October. QSL to home call.

TANZANIA, 5H. Dave, K8MN, is QRV as 5H3US on 160 to 6 meters. He will be here for the next three years. QSL via WA8JOC.

NEPAL, 9N. David, G4ERW, is QRV until November 7 as 9N7RW from Patan, which is nearby Kathmandu. QSL to home call.

ANGOLA, D2. Fernando, D2BB, has been QRV on 28480 khz from 1700 to 1730z. QSL via W3HNK.

GLORIOSO ISLAND, FR/G. Jacques, FR5ZU, will be QRV until October 30 as FR5ZU/G, using SSB and RTTY on al bands. QSL via JA8FCG.

NORTHERN MARIANA ISLANDS, KH0. Members of the Mariana Islands DX Association will be QRV in the VK/ZL/Oceania CW Contest. Activity is expected on 80 to 10 meters. QSL via operator's instructions.

GUAM, KH2. Mariana Islands DX Association members will also be QRV in the VK/ZL/Oceania CW contest. Activity is expected on 80 to 10 meters. QSL via operator's instructions.

BRAZIL, PY. Look for PU5U and PW5L to be QRV using SSB and CW respectively, from Sao Francisco Island, IOTA SA-027, from October 10 to 14. QSL both calls via PP5LL.

POLAND, SP. Special Event Station SN20JP will be QRV from Krakow to celebrate the 20th anniversary of the pontification of Pope John Paul II. The station will be QRV until October 31 on 160 to 6

meters using all modes. QSL via SP9PKZ.

EASTERN KIRIBATI, T32. Tuck, T32BI, has been QRV on 14260 khz from 0130 to 0300z and then on 14200 khz from 0630 to 0830z. QSL via KH6DFW.

CANADA, VE. In recognition of the 100th Anniversary of the Yukon Territory Gold Rush, Special Event Callsign VY1A will be QRV during October and November on all bands, using CW, SSB and RTTY. VE stations QSL via VY1JA, all others QSL via KB5IPQ.

NORFOLK ISLAND, VK9N. Jim, VK9NS, has been QRV on 24901 at 0915z. He can also be found on 14222 khz from 0300 to 0400z. QSL to J. Smith, PO Box 90, Norfolk Island, NSW, Australia.

PRINCE EDWARD AND MARION ISLAND, ZS8. Barry, ZS2H, has been QRV on 10 meters around 1300z. QSL to home call.

THIS WEEKEND ON THE RADIO. The Ten-Ten Day Sprint, ARRL International EME Competition, Rhode Island QSO Party, Pennsylvania QSO Party and the VK/ZL/Oceania CW Contest will keep contesters busy this weekend. Please see October QST, page 108 for details.

Larry,

Been there, done that (got the t-shirt).

May I humbly and sincerely suggest QRP -- particularly the kit-building aspect. There's a ton of folks out there that are doing same. Hell, there's even a project on the web (elmer 101) based on a cheap kit. If you would like some more info, I'd be happy to send it along.

..I'm not, by the way, a shill for any commercial interest, just an enthusiastic practioner..

72..

3176. DXCC Country List (10/98)

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-09 00:00:00 UTC
From: k2di@usa.net
Message-ID: <6vjnsa$5oc@bgtnsc01.worldnet.att.net>
Source record: 27713
Cross-posted to: rec.radio.amateur.dx,rec.radio.info

The current ARRL DXCC country list (10/98 version) follows. Changes include new entities Austral Islands (FO0), Marquesas Islands (FO0) and Temotu (H40), deletion of Southern Sudan (ST0), new prefix VP6 for Pitcairn Island, and new "other" prefixes in use in the UK. Also note my new email address (below).

This list is available via
- occasional Usenet posting to rec.radio.info and rec.radio.amateur.dx.
- ftp://ftp.cs.buffalo.edu/pub/ham-radio/dxcc-k2di and other Amateur Radio archive sites.
- email from the ARRL Information Service -- send a message containing the line "send dxcck2di.txt" to info@arrl.org.

Much of the information was provided by Ron McConnell, W2IOL. His detailed geographical listing is also available via ftp from ftp.cs.buffalo.edu, and from info@arrl.org. Thanks also for updates and corrections from Peter Swynford (G0PUB), Jan Alvestad, Bolon Lin (BV5AF) and Trey Garlough (N5KO/HC8N).

The colon-separated fields are:
1. primary amateur prefix
- "*" suffix for deleted countries
- "@" suffix for likely new countries
2. country name
3. continent(s)
4. ITU zone(s)
5. CQ zone(s)
6. time zone (hours from UTC)
7. latitude
8. longitude
9. ITU prefix allocation(s) ("~" suffix for unofficial)
10. other amateur prefixes

Please mail corrections and suggestions to me.

Bill Brelsford, K2DI
k2di@usa.net

3181. AM radio dxing what is best radio for it ?

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-09 00:00:00 UTC
From: rk753@mindspring.com
Message-ID: <361e195f.614094@news.mindspring.com>
Source record: 27718

My elderly stepfather likes to listen to baseball and basketball on AM radio. He lives on a farm near Bowlinggreen Ky and most of the stations are in St. Louis or Atlanta etc. I am wanting to buy him the best AM receiver I can find. Any suggestions ?

REPLY TO RK753@mindspring.com

The best thing I've found without spending a ton of money is the GE
Superadio; I have a Superadio II, I think the III is the current model...
I don't know what they sell for now, I bought mine new about 5 years ago for
$40.00. I've used mine many times for the same purpose that your stepfather
would, and it works great. The sound quality from the speaker is pretty
good, too.
Good Luck,
Steve Murphy K8VO

Go to the web

Throw "Ilmenau" at a search engine ... one hit will be DK0TUI

Use that site's German callbook server

Why Ilmenau? The suffix stands for "Technical University of Ilmenau",
and DK0 is a club station prefix. Now you got the idea, don't you.

Good luck
KB2YVC

No question about it. Get a GE SuperRadio II or III. Inexpensive and work great. Hook up a
wire antenna and ground and it will really pull in the stations. Works good with just the whip too.

3186. !!!!!!!!!!Conspiracy at McGill University!!!!!!!!!!!!!

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-10 00:00:00 UTC
From: Nizar Hajjage <redsun@vif.com>
Message-ID: <IjzT1.269$By.506044@198.235.216.4>
Source record: 27722
Cross-posted to: att.ham-radio,rec.antiques.radio+phono,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.spa

I have a serious problem with McGill's administration and I need your immediate assistance.

I am a student in the Chartered Accounting Department at McGill University.

On October 1, 1996, I started working at McGill University's Center for International Management Studies (IMS) to reconcile funds provided by the World Bank to the University.

However, I noticed that McGill's administration had been manipulating the accounts and falsifying the reports. The manipulations amount in the hundreds of thousands of dollars.

When I reported what I saw to the University's Internal Audit and to Professor Bernard Shapiro (McGill's Principal and Vice-Chancellor), the University expelled me from the CA program, claiming that I failed my exams. I wrote excellent exams, but McGill rigged the marking to stop me from reporting what I saw at IMS. Please contact Professor Shapiro at SHAPIRO@UMS1.LAN.MCGILL.CA and ask him why the university rigged my marks.

I tried to settle the matter with the University's Ombudsperson, Mrs. Estelle Hopmeyer and with the Legal Clinic director, Mr. Alex Pless, without success. When I went to see Mr. Pless, the University's security hastily dragged me outside the University. This action is a gross breach of the University's own Charter of Students' Rights which allows me to contact Mr. Pless.

My conflict with McGill's administration reached the University's Board of Governors and Audit and Finance Committee, but nobody listened to me.

I lodged complaints against the chairmen of McGill's Board of Governors and Audit and Finance Committee with Quebec's Order of Chartered Accountants, since the chairmen of the above committees are both CAs. However, I was given a mock hearing at the Order, and the President of the Committee on Discipline ruled, unjustly and unfairly, in favor of McGill's chairmen. You can understand why, can't you? You could confirm the details with Mr. Nicholas Chagnon V.P. Publications.

The lawyers whom I contacted so far are not defending me. I suspect that the Dean of Students Professor Rosalie Jukier is influencing these lawyers not to defend me. Please go to the office of the Dean of Students and ask her why is she stopping my lawyers from defending me.

To silence me, a collaborating judge ruled that I may not contact anybody at McGill. He also ruled that I am not allowed to be on the University's campus, although I did nothing wrong. You must contact me to see my evidence about the funds manipulations at IMS and to reestablish justice at McGill.

The University sent me to jail although I am innocent of the harassment charge which Dr. Lees is accusing me of. Dr. Lees sent me to Riviere des Prairies Psychiatric Detention Center, alleging that I have been harassing the university's staffs. This is not true, since I was only questioning the staffs about the suspicious funds manipulations.

Now I am out of work, cannot continue my education, and the University is suing me for criminal harassment. The court ordered that I undergo mental evaluation. A conspiring psychiatrist alleged that I suffer from delusional disorder of grandiose type. This is a lie that is intended to silence me. Will you help me report my psychiatrist to the appropriate authorities?

You might want to confirm the above facts with McGill's Secretary-General, Dr. Victoria Lees at: LEES@UMS1.LAN.MCGILL.CA, but I advise you not to, because she will give you false answers.

Other strange events happened, and I will tell it all to you after you contact me. I request that you communicate with the University's reporters, student groups, the students in the CA department and your colleagues to expose the World Bank funds conspiracy at IMS.

This could happen to you or to your friends, so you must help me put an end to McGill's injustices. Also, I need your assistance. My family and I are in a desperate situation because of McGill's emotional and financial pressures. Would you help us in this respect?

Please respond and take action. Thank you for your collaboration.

I have a serious problem with McGill's administration as well so I
will be quitting the study [degree program] by the end of this term...

doing something else from winter.
Too bad that McGill is losing the students like we are.
I will be posting these articles in concordia.general, can.general
etc. and you should do the same to avoid getting excellent students in
this fuc*king university.

>lawyers not to defend me. Please go to the office of the Dean of =
>Students and ask her why is she stopping my lawyers from defending me.

well... if she has 1 billion in her pocket and pass it to the lawyer
whomever you hire... what happens ? probably you shouldn't think
of lawyers but just to take this university court directly. It [this
university...] is ridiculous. I have enough evidence to win court
battle.

>To silence me, a collaborating judge ruled that I may not contact =
>anybody at McGill. He also ruled that I am not allowed to be on the =

>harassing the university's staffs. This is not true, since I was only =
>questioning the staffs about the suspicious funds manipulations.

yep. they will do whatever they can do to prevent you from finding
out the evidence. Thanks for your post. I will be using this as
well to kick this university's staffs out of their administrations.

****
I talked with one of the students here and he told me that professor
changed the course outline after the final exam is written. That's
not acceptable. (i.e. changing the final exam weight from 50% to
2/3 of final mark). It is ridiculous. Just keep up posting and
I will post my stories also.
****

>Now I am out of work, cannot continue my education, and the University =
>is suing me for criminal harassment.

let's sue this university. are you willing ?

> The court ordered that I undergo =
>mental evaluation.

probably I have to go under mental evaluation as well !!!!!

>This could happen to you or to your friends, so you must help me put an =
>end to McGill's injustices.

YES !!!!! Let's sue this university. I am serious about it. With
series of events like this, I am sure that the ones who are in charge
of this university MUST BE KICKED OUT from this institution.

> Also, I need your assistance. My family and =
>I are in a desperate situation because of McGill's emotional and =
>financial pressures. Would you help us in this respect?

I will be putting my money if you and others are willing to take this
university to court etc. in question.

Just to let you know... there are students who know and who care about
the ongoing incidents at this university.

3187. October Propagation Forecast

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-10 00:00:00 UTC
From: ids@nol.net
Message-ID: <361ef7fb.27361421@news.nol.net>
Source record: 27723

PROPAGATION - by AD5Q HOUSTON, TEXAS -- OCTOBER 1998

Ten Meters is hot, and seasonally at its annual peak. Good openings to Europe are a daily occurrence, and many CW-phobic newcomers to our hobby are getting their first taste of real DX. Looking at the recent solar numbers, there is still room for improvement. The spike in solar flux to 180 at the end of August gave cause for optimism, but the range for this fall looks more like 120 to 160. We hope for 160 in the contest, though the probability is not good.

The quality of European openings vary widely within this range. At 120, we get most of Europe from Texas - but very little of Russia. With a flux of 160, we get an opening which lasts through the morning and includes all of European Russia. It takes a good broad opening to produce high rates and QSO totals on 10 in a contest. The broadest openings will be from the eastern US, where Russia will come through fine on a flux of 120. The west coast would have a very narrow window in such an event, as the band would close across most of Europe before it even opens out west. The CQWW will not be fair to everyone on 10.

15 is actually in better shape, since the moderate flux levels are not much of a hinderance. Reliable openings occur over high latitude paths, and the band does not close so abruptly at sundown. We can work into Asia and the Pacific after dark, and openings to Europe continue after their local sunset. For the central and western US, this will be the most productive rate band if 10 doesn't play well on contest weekend.

Openings on both bands will be very predictable: day paths. Nighttime MUFs are plummeting; closing 20 Meters in the evening by midnight and moving activity to the low bands. QRN levels are down to where 40 is in excellent shape. 40 SSB has other problems (shortwave QRM), and many SSB ops look to 75 Meters in lowband season for their evening DXing. The European opening on 40 lasts through the evening here, though most activity comes from the sunrise areas where the band is peaking and people are actually up. The other peak to Europe is in the late evening on their end - late afternoon for most of us (and just after dark on the east coast).

20 will be harder to read in the contest. The nightpaths are closed, the daypaths are marginal, and signals propagate best along the grey line. Peak times are several hours before and after sunset, and the hours after sunrise. We work into other areas in the vicinity of the local grey line. The morning opening includes excellent daily long path to the southwest and parts of the world normally hard to reach. Nighttime MUFs are higher in the southern hemisphere, and we can work

into and across these nightpaths as long as we are near the greyline ourselves.

Hello All,

I'm going to erect a doublet antenna and I have one question. Should the legs of this antenna be resonant to the lowest band that I can accommodate in my available space or do Ijust go for longest length possible, resonant or not? I'm guessing it's the latter but confirmation would be appreciated.

For what band? I don't recall anything from late 70's or early 80's,
but it would have been easy to build an FM. I don know that there's a
PVC directional antenna available, I think from Ramsey, for AM band.
I've heard good things about it, but no first-hand experience.
Dave B.

SB DX @ WW $OPDX.378
Ohio/Penn DX Bulletin No. 378

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 378
BID: $OPDX.378
October 12, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2VW, WB2RAJ/WB2YQH & The 59(9) DXReport, KN4F, WD4NGB, K6RIM, K8YSE, WA6KBL, W8AV, W8WFN, WA8JOC, KE9NA, NE9U, BA4TB, DJ5AV & DX News Letter, EA5GRC, F6AJA & LNDX, G3SWH, G4BUE & DX News Sheet, HK8RPV, JA1ELY, JI3ERV, PA3DMH, PT2TF, RA0FF and ZS5BBO for the following DX information.

5H, TANZANIA. Ken, WA8JOC (CY0AA), reports that Dave Heil, K8MN (ex-J52US, A22MN), is now officially 5H3US. He also mentions that Dave has just received some equipment, so start looking for major developments over the next 3-4 weeks for amateur operations. Dave will be in Dar es Salaam approximately 3 years. Dave's tower is not yet up, but he hopes to have at least a R5 vertical and a Butternut HF2-V vertical up soon. Because of his work schedule, which he reports is quite hectic at the moment, he will have less time for amateur radio than first thought. Dave plans to be active on all bands 160-6 meters on CW, SSB and RTTY. Ken, WA8JOC, will be his QSL Manager as in the past, so the same rules apply as Dave's A22MN operation... SASE will receive a card ASAP .... bureau cards are processed at twice per year, "or more frequently if the spirit moves Ken" as he indicates. QSL to: Ken "Shep" Scheper, WA8JOC, 5875 Cedaridge Drive, Cincinnati, OH 45247 U.S.A.

5J, BOCAGRANDE ISLAND (Update). This Colombian Island DXpedition was planned for October 10-11th, but was postponed until October 31st through and November 1st. Bocagrande Island belongs to the group of islands in IOTA SA-081 (El Morro Island, El Gallo Island and others islands). This operation will have two stations active on 20 and 40 meters using the callsign 5J8IB on SSB. QSL via HK3DDD or via bureau. This is the first DXpedition from here.

6Y, JAMAICA. Operators Jack/W4SO, Jon/K7CO, Dennis/AF7Y, Ken/K2KW, Tom/N6BT, Rich/N6BV, Robert/N6TV, Fredrick/KE7X, Mark/AG9A and David/W9QA will be active again November 20th through December 1st. They will use the callsigns 6Y5/homecalls, but during the CQWW CW Contest as a Multi/Multi

entry they will sign as 6Y2A. They plan to have seven stations active from an oceanside site at Discovery Bay using Force 12 yagis and vertical antennas spread out over a 1000 feet section of the ocean shore. QSL via home callsigns and 6Y2A via WA4WTG).

9N, NEPAL. The "DX News Letter" reports that David, G4ERW, is active as 9N7RW from Patan which is situated near Kathmandu. He will be here until November 7th. QSL via G4ERW.

AFRICAN TOUR (by JA1OEM). The 76 old year Mako, JA1OEM, has arrived in Banjul, The Gambia, on October 7th. This is his third time to visit C5-land. He will operate as C56HP until October 19th. He hopes to provide a new one to anyone that needs this. He will be mainly on the high bands this time. After "The Gambia", Mako will travel to Ougadough, Bulkina Fasso where he will operate as XT2HP until November 24th (activity may start on the 21st or 22nd). After Burukina Fasso, Mako hopes to go Cote d'Ivoire (TU), November 26th through December 5th (No callsign mentioned). After TU, he will return to C5. Mako hopes to visit Mali (TZ), but is not sure when and how long he will be in TZ. Mako will leave for Japan during Christmas. During his activity, look for his slow speed CW on 3 or 13 kHz up from the lower band edge on any band. On SSB, look for him on 3795, 7043, 14145, 18115, 21245, 249145 and 28475 kHz. He will try 160m from XT2-land late November. QSL via JA1OEM direct only, no bureau, to: Shinichi M Toyofuku, Box 9, Sawara, 287-8691 JAPAN

AH2, GUAM. The members of Guam Contest Club will be active from KH2 (Guam Island) in the CQWW DX SSB Contest. They have won the Oceanic leader in the Multi-Single category in 1996 and 1997. This year, they will have more operators and enter as a Multi-Multi category. The team of operators are: Aki/JI3ERV/NH2C, Kaz/JG3RPL/N1BJ, Seo/JR3RVO/WX8M, Toshi/JR7OMD/WI3O, Kazu/JK3GAD/AL7NC, Kou/JH7QXJ, Sam/JR8VSE, Yuki/JH1NBN/K3ZB and Koln/JP1JFG/N2IU. They will use the callsign AH2R. They report that their Sunrise/Sunset is 2013/0757z and to also look for them between 7075-7100 kHz on 40 meters. QSL via JI3ERV.

B4R, CHINA. Deal, BA4TB, reports that the JiangSu DX Club plans to participute in the CQ W SSB Contest as B4R. This station will be active on all bands, in the contest as a Multi Op/Single Transmitter entry. QSL via BY4RSA.

D6, COMOROS. The "LNDX" reports that Denise, F6HWU, will again be in the Indian Ocean and will be active as D68WU. She will be there from November 15th to December 5th. Activity will be mostly on CW and RTTY. She will be active during the CQWW CW Contest. QSL via CBA.

E3, ERITREA (Update). The "Space A DX Group" DXpedition is on track with their plans to operate from Eritrea. They will be arriving in Asmara, Eritrea, in 2 groups, one on the night of November 3rd, and the main group on the night of the November 4th. The first group will try to get all the details out of the way, and be ready for the main group on the 4th. They will make every attempt to be active starting during the day of November 5th. They can not get their callsigns until they arrive in

Asmara. They are still in need of financial support, mainly because of the added $500 per operator fee. Donations can be sent to WD4NGB. OPDX InterNet Subscribers will receive the complete unedited press release by Bruce, WD4NGB, as an additional bulletin.

FR, REUNION ISLAND. Phil, G3SWH, reports to OPDX that he will be on vacation/holiday on La Reunion Island (IOTA AF-016) from November 17-24th. He expects to be active on all bands 80-10 meters, CW only as FR/G3SWH with an IC-706 and wire antennas. Since this will be a holiday operation, his activity is likely to be restricted. Look for him during his mornings for an hour or so, and an hour or so during his evening hours. QSL via G3SWH: Phil Whitchurch, 21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, United Kingdom (or via the RSGB bureau).

FT5Z, AMSTERDAM ISLAND (Update). A FT5ZH DXpedition press release issued by Jeffrey, WA6KBL (pilot stn. for N. America), states that the FT5ZH DXpedition to Amsterdam Island is on schedule, and there are no problems so far. The equipment has been tested, the antennas assembled, checked and disassembled, and everything has been well packed and is departing from Marsailles on a ship to Reunion on October 5th. The operators are preparing their personal belongings and will depart by plane for Reunion in early November. They plan to visit several of the resident Reunion operators during their 5 day stay on Reunion. They will supervise the loading of the equipment aboard the Marion Dufresne (ed. GEEE, where did I hear that name before?). Enroute to Amsterdam Island, the ship stops at both Crozet and Kerguelen (reports at this time indicate they will not operate from these islands). They plan to arrive on Amsterdam Island on November 25th and expect to have all antennas erected and operational on November 27th. They will operate around the clock as much as they can until their departure on December 25th. They will have a much shorter journey back and expect to arrive home in Lyon very late on December 31st. OPDX InterNet Subscribers will receive the unedited press release as an addtional bulletin.

NCDXF CHANGE OF ADDRESS. The Northern California DX Foundation has changed its mailing address, effective immediately. Please note the NEW address: Northern California DX Foundation, P.O. Box 1328, Los Altos, CA 94023-1328

HR, HONDURAS. Operator Ernesto, HR1ERL, states that he is ready for the next CQWW SSB DX Contest and plans to be active on all bands. He will be mainly looking for African stations in the contest. QSL via HR1FC, P.O. BOX 1734, Tegucigalpa Honduras, Central America, Zip Code 11101.

HV, VATICAN. Look for the Pontificia Universita' Lateranense station, HV5PUL, to be active again possibly November 6-13th to celebrate the opening of the 1998/99 academic year. QSL direct.

JT, MONGOLIA. The "DX News Sheets" reports to look for Jay, W8JAY, who may be active this week (October 13-15). The callsign was not mentioned nor were there any other details. QSL via home callsign.

QSL INFO AND NEWS.......
Goose, W8AV, informs OPDX that he has finally received the VP5FXB QSL cards from the printers and will begin answering all contacts this week. He reports part of the delay was getting the artwork into a format that the printer could use. He apologized for the delays in QSLing, but this problem was beyond his control.

Edwin, ZS5BBO, reports to please note that he is now the QSL Manager for: GN3WOJ, GM2MP, GS2MP, GM6V and GM7V. If you have cards outstanding for these stations, please send him the QSL and he will get the QSLing up to date. GM8V will be active in the CQWW Contest and all QSL cards are also direct to him. For address see "Special Event" below.

The "RA0FF LogSearch Collection" now includes C6AKM (WAEDX contest 1998), C6A/DJ3TZ, C6A/DL8OBF, C6A/N4BP and RA0FF CQWW RTTY Log. Check out the log search on the WEB page:
http://www.qsl.net/ra0ff/CONT/tests.html

REPEAT OF CORRECTION. Alan, 3C5I, requests OPDX to repeat that the P.O. Box listed in OPDX.345 was incorrect. The correct address is: Alan Isaachsen, c/o Mobil Equatorial Guinea, P.O. Box 139082, Dallas, TX 75313 (ed. The P.O. Box needed one more digit!).

Jean, F6AJA, reports that he has seen an error in some DX bulletins. He states that he can send QSLs for FK8VHT ONLY, not FK8VHM or FK8VST or any other FK callsigns.

7Z1AB LOGS. Jim, KN4F, reports to OPDX that he has only receive all about half of the logs for this station since May. There are NO U.S. hams at the Embassy, and only a several Europeans have activated the station for a few contacts. He is currently unable to get the logs. He also feels the station was "SHUT DOWN" on October 8th.

The 3C5DX QSLs are back from the printers'. It is reported that Elmo, EA5BYP, is now answering all the cards received.

Didier, FK8VHN, from New Caledonia may be forced to use the bureau because of the postage costs in his country. He states 1 IRC is OK for return postage to all continents. French postage stamps are not valid. One U.S. green stamp "IS NOT ENOUGH": by 30% (for North and South America and Asia; by 50% for Europe.

SPECIAL EVENT. The "South African Corps of Signals" celerates its 75th anniversary on November, 1998. To mark ths occasion a special event station with the callsign ZS75SIG will be in operation during the period October 30th to November 30th. A field station will be operating from the Bluff Military Base on Saturday, October 31st, from 0600-2000z. ATTENTION RSARS stations, the ZS75SIG station is hoping to be allocated a RSARS number for this event also. The station will operate daily CW/SSB on 40/20/15/10 meters. A special QSL in the form of a certificate will be sent to all stations making contact with ZS75SIG and submit QSL cards together with 2 USD or 8 IRCs direct to: Edwin Musto (ZS5BBO), P.O. Box 211032, Bluff, 4036, South Africa. No cards via the bureau please!!

SPECIAL EVENT. Rev. Paul Bittner, W0AIH, will be hosting the special events callsign N98ITU during the upcoming CQ World Wide SSB DX Contest, October 24-25, 1998, in conjunction with the ITU conference which gets underway October 12th through November 6th in Minneapolis, Mn.

TL, CENTRAL AFRICA. Alex, TL5A, has been currently active on both 160 and 80 meters. Check 1833 kHz between 2230 and 2315z (also heard around 0415z). Also, check 3505 kHz between 2315 and 2330z. Before these time look for him on 14025, 14192 and 7001 kHz. Meanwhile, Alex's QSL Manager PA3DMH, states QSLing is progressing well and within the next two weeks all QSLs received up to October 1st will be mailed. By the end of October the backlog should be history and all requests should be answered within the normal two weeks (in > out). Log check is available at: http://www.igr.nl/users/pa3dmh/logs/log_search.html

TY, BENIN. Tom/DJ6TF, Tom/DL7BO, Sigi/DL7DF and Frank/DL7UFR will be active from here November 3-18th. They will operate two stations around the clock on CW, SSB and RTTY. Their main activity will be on 160, 80, 40 and 30 meters. They hope there will be good conditions.

VP5, TURKS AND CAICOS ISLANDS. The team of Frank/WA2VYA, Bruce/WA3RHW and Jack/N2VW will be active again as VP5T in this year's CQWW DX SSB Contest. All are members of the Frankford Radio Club. Their operation will be at Jody's (VP5JM) Hamlet on Providenciales (NA-002) and take place October 20-27th. There will be plenty of action on CW and the WARC bands before and after the contest weekend. QSL VP5T to N2VW direct via callbook address, or via the ARRL QSL Bureau, by adding "VIA N2VW" on the card. An E-mail with log data sent to N2VW's InterNet address (n2vw@skyhigh.com) requesting a card via the bureau will be answered with a bureau card... (no QSL is necessary). Same for SWL QSLs.

VY1, YUKON (Canada). "The 59(9) DXReport" states that in recognition of the 100th Anniversary of the Yukon Territory Gold Rush, the special callsign VY1A will be active during the months of October and November on all bands, CW, SSB and RTTY. VE stations are to QSL via VY1JA and all others via KB5IPQ.

XV, VIETNAM. The "DX News Sheet" reports that Larry, K6SGD, will be active October 20th through November 14th as XV1Z. Activity will be mainly RTTY. QSL via home call.

YL AND IOTA DXPEDITION. Teresa, PT2TF, informs OPDX that the "First PY Young Lady DXexpedition" will take place October 29th through November 2nd, using the callsign PR2YL on SSB and PS2S on CW. The team will be operating from Comprida Island (IOTA SA-024 and DIB 021). Activity will be on 80/40/20/15/10 meters. Look for them on the IOTA and net frequencies. The operators will be: PP5ASN, PT2TF, PY5OA, PY5NT, PY2DHP, PY2ATL and PY2KTT. QSL to PP5LL: Lira, BOX 08, Florianopolis, SC Brasil.

ZP5, PARAGUAY. Jon, KE9NA, will be traveling to South America on November 14th through November 25th. Most of his time will be spent in Paraguay. Jon will be active and will be signing ZP5/KE9NA. He expects that his activity will mainly be on 10 meters and 15 meters. Jon will also be in

Brazil and Argentina for some of the time as well, but he doesn't expect to do any operating there. At this time not all dates are set for when he will be in Paraguay. QSL via KE9NA.

ZS (South African) NEWS.....
Edwin, ZS5BBO, reports that he will be competing in the CQWW SSB Contest (October 24-25th). He will only be working 20m during the contest, so he urges all operators to turn their beams to South Africa and work the one and only "ZS5 Black Box Operator!!"

ZS3MM operation is still planned to take place from December 16-24th. Edwin, ZS5BBO, will be operating on 10/15/20/40/80 meters from the city of Diamonds - Kimberley. If you need ZS3 for any awards, this will be the time to put ZS3 in your log and claim any outstanding awards. Examples are: WORKED ALL ZS and WORKED ALL AFRICA. QSL via ZS5BBO.

I believe that it may be a dresser or dressler antenna from possibly
England... It was an amplified receiving antenna...

Hello Dxers!

OH0MFP and OH0LQK are qrv on Aland Is. until 17th
October. They are using 1kW on 40-10m bands and
100W on 6 meteres. Antennas GP for HF, 4 el monoband yagi
for 24Mhz and 6 el yagi for 6meters.

Qsl&#65533;s via homecalls, OH3MFP AND OH3LQK.

Pse include the homecall for burocards, OH0-qsls
are no longer delivered to OH-stations if
homecall is not clearly marked on the qsl.

I enjoy ham radio when it is actually getting to know other
hams on the air and being able to run into them more than
once..

I am very active on 80 and 40 meter pactor/gtor and find
this mode very condusive to a long-winded "let's share war
stories" type of operation. I am not into contesting, but if
you are, then that's your niche in ham radio. Personally,
exchanging signal strength reports and qsl information, only
to run off and do the same to the next station seems a waste
of spectrum resources...

Not to mention, that most of these are robots.

Basically the whole disease is what General Patton referred
to as "paper hangers."

That is, people who's sole lease on life is to accumulate paper
to hang on the wall. The extreme being people who belong to
Mensa type organizations. If their IQ was so high, they must
realize how stupid the whole idea sounds. But that isn't the
case.

There's four things to hang on your wall: 1) Your High School
Diploma, 2) Your College Bachelors Degree, 3) Your College
Masters Degree, and 4) Your Doctorate.

Everything else is akin to mowing the lawn...

Steve

Actually, you probably should hang your station license there so
you don't forget to renew it in time.

But then again, I don't know why you'd waste space with the above when
you could put other things that are more meaningful up instead.

For anyone who is interested in using a DX cluster via the internet. Feel
free to telnet to

k7co.j7.net

It will ask for your callsign and password

If you are not familiar with how to telnet. Sign onto your internet provider
and then
click on the Start button, then click on run and in the dialogue box type

telnet k7co.j7.net

This will work if you have loaded TCP/IP.

This cluster is based in the San Francisco Bay Area so the spots may or may
not
be relavent to you. This cluster is linked to the west coast spotting
network.

When you login in type help and you can get some basic information

or you can type

sh/dx

or

sh/wwv

or

sh/u

to get started.

any questions feel free to email me at

cluster@vcr.com

Trish,

Many people enjoy contesting and DXing in addition to ragchewing. Don't be too hasty to determine what is and is not a waste of spectrum. I enjoy manu aspects of the ARS and don't judge what others enjoy...

I agree with Tom....now network TV and talk radio--that is a waste of spectrum,
and worse yet, human brainpower to watch/listen to it.
Mike

It seems to me that working 100 countries is actually fairly easy given just a modest station and average sunspots. Getting the cards seems to be the devil, and then there's the nuisance of getting them to a checker if you don't happen to live in the USA.(actually, there was an accredited card-checker operating at the RSGB HF convention last weekend, which saved a number of people having to trust sometimes irreplacable records to the post)

DXCC certificates impress me, but chiefly as evidence of the perseverence of the operator and his or her skill in navigating pile-ups. The people with scores approaching the total number of countries that have ever existed have devoted most of their lifetimes to their pursuit, which has to be impressive. I find a station that can run moonbounce SSB just as impressive, I find a homebrew transceiver - especially if it isn't directly built to a published design equally impressive, too. The good thing about this hobby is that people can exert themselves in different ways.

> I wouldn't have had many, if any, meaningful conversations if I had
> spent a half hour per contact, instead of 20 seconds. And the end
> result is all the same. Nobody called me, they called my QSL card...

I'd never thought of that in those terms. That's a startlingly good way of putting it.

Cheers
David GM4ZNX

3227. What Gives With This Listserv?

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-13 00:00:00 UTC
From: A/B Free <redfree@erols.com>
Message-ID: <3623F259.D0A1D14E@erols.com>
Source record: 27567

I can't begin to figure it out. When I sign on, my Netscape software says I have 92 messages and 22 unread. But when it shows up on my screen, there are only FIVE (yep, 5) unread messages and nowhere near 92 outstanding messages showing. When I used to be on another listserv (rec. radio.swap) there were often 1000 outstanding messages but the unread total was more accurate. Could someone explain just how the counter function works on a listserv like this? Am I the only person experiencing this phenomenon?

--- Hi Red -- when you are through reading messages and want to clear
the newsgroup --- do you hit "Group" ???

Also under options, have you selected "show only unread messages" and
not "show all messages" ???

Just some possibilities

I hope I don't start up the old argument about 'evil' contests. But on contest weekends, I find WWV more interesting to listen to than the rapid "traffic" of contesters. I've only been in the hobby 2 years, but I wonder whether there were always this many *&^%$ contests, and also wonder, if the frequency of contests has changed appreciably over the years, what has caused that? Is it a hardware issue?

I must be missing something - my guess is that you want to buy IRCs at
something less than the $1.05 the USPS charges for them.

If there's a source for IRCs at a "discount" I'd sure like to know
about it (and I'd like to know where the source gets the IRCs and how
they come upon them cheaper than the USPS sells them).

I've got 89 countries confirmed by direct QSL and IRCs - adds up to
around $93 in postage. If there is a cheaper way to get IRCs, I'm all
ears...

Many QSL managers will sell them for around $.60 - $.80 each. After
all, if they are only worth a $.60 stamp here in the United States.
Check back in the "Ohio/Penn DX" archives. There were a couple of
articles on IRC's within the past 6 weeks along with a list of some QSL
managers who will sell them.

A lot of DXers buy their IRCs from QSL managers and DXers handling expedition verification chores that receive a lot of cards with IRCs. The manager or DXer only gets a 60 cent airmail stamp if he/she redeems it at the post office so there's a big spread between the purchase price of the IRC and the redemption price. I've purchased a lot of my IRCs though my local DX club for around 65 cents each. Many QSL managers will sell them at anywhere from redemption value to a bit more (perhaps 70 cents each).

I've seen a list of managers offering excess IRCs somewhere on the net, but am not able to remember where
it was; perhaps on AC6V's super-link site.

After being inactive for about 15 years, I bought a used FT-101E in
November of 1992. This was just after the peak of the last cycle. I put
up a sloping dipole for 40 meters (the low end at about 5 feet and the
high end at about 30 feet) and started working DX almost exclusively on
40 CW.

I didn't have a computer, packet, Internet or any DX newsletter
subscriptions then. By April of 93 I had worked worked my 100th country.
I kept a tally sheet of the stations and countries I'd worked, the dates
I sent QSL's, etc.

Those were exciting days! Back in November and December of 92, almost
everything I worked was a new country! Remember that?

Now I'm creeping up to the 300 mark of countries worked, and it's STILL
exciting! It still seems a little like magic to me that I can contact
someone half a world away with a small radio at home. All those QSO's
with DL's, F's, G's, etc. are still fun. I guess that is why I'm involved in
this hobby anyway!

To answer my own question, multiple QSL's for multiple contacts.

I sent (I don't recall why) two cards for two contacts with a particular station and just got a return of one QSL for one contact, and my own back with "not in log" for the other contact. If I had sent only one card for both contacts, then that card would be useless to him (as if he wanted mine, but you never can tell), and less likely to get even the one in return, I think.

>>to him (as if he wanted mine, but you never can tell), and less likely
>>to get even the one in return, I think.

Hmmm, your callsign sounds familiar, was that an HC8N contact??
Speaking for myself as a manager, I don't care whether people send
separate cards or not. I send back "not in log" cards, so that
the sender can double-check the time/date/band for the QSO in
question. If one QSO out of several on a card is "not in log",
I don't know of any manager or station who would refuse to send
you a card or cards for the QSOs that are OK in the log!

The main things you can do to annoy a manager are (i) not send a
self-addressed envelope (some overseas people will send a green
stamp but no envelope - I don't like having to go and find an
envelope and write out their address), (ii) request cards for
10+ QSOs without including even a 5c stamp to cover some of the
cost of the cards. In both cases I would respond, but I would
curse you (inwardly) at the same time.

Yes, in fact it was an HC8N contact (and not). Yes, but if HC8N had, for some strange reason, wanted my card, then the card I might have sent would have been of less value (I think), since one contact on it would have been bogus.

For US addresses, it's not a big deal I guess, but for overseas contacts, it might be more significant.

>counter function works on a listserv like this? Am I the only person
>experiencing this phenomenon?

First I'll assume you're talking about a newsgroup instead of a
listserv; they are quite different animals.

News servers assign an article number to each post received in
a given group. When your newsreader connects, the first information
it gets about the group is the low and high article numbers which
are available. Your newsreader matches this with the ranges of
article numbers it's seen before. For instance:

at last connect to rec.radio.amateur.dx, the high article was 1000
this time, the high article is 1200

So Netscape tells you there are 200 new articles. But every article
from 1001 to 1200 may not be available. They may have expired or been
cancelled (by the poster, or as spam). So until you go to download
the headers for those 200 articles, Netscape doesn't know that,
for instance, article 1100 has been cancelled. Once it downloads
the headers it has an accurate count.

So, this is normal.

DX Bulletin 41 ARLD041
From ARRL Headquarters
Newington CT October 15, 1998
To all radio amateurs

SB DX ARL ARLD041
ARLD041 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, DXNL, QRZ DX, the Daily DX, and Contest Corral from QST. Thanks to all.

VIETNAM, 3W. Larry, K6SGD, will sign XV1Z from October 20 to November 14, using mostly RTTY. QSL to home call.

NIGERIA, 5N. Mario is QRV as 5N9EAM. QSL via IK7JTF.

EASTERN MALAYSIA, 9M6. Ed, K8EP, is currently QRV using mostly CW on 40 to 10 meters and operating from 9M6AAC in Hillview Gardens on Sabah. QSL via N2OO.

ERITREA, E3. Jacky, E31AA, has been QRV lately on 30, 20, 17, 12 and 10 meters using mostly CW from 1600 to 2300z. QSL via ZL3CW.

GUADELOUPE, FG. Members of the Southern California DX Club will be QRV from October 17 to 27 as FG/homecalls before and after the CQ WW SSB Contest. Activity is on 160 to 10 meters using CW and SSB. For the contest, look for them to use FG5BG. QSL via operator's instructions.

ANTARTICA. Dave will be QRV as KC4AAA, generally on 14243 khz, from 0000 to 0800z daily until November 4. QSL via NC6J.

ALAND ISLANDS, OH0. OH3MFP and OH3LQK are currently QRV as OH0MFP and OH0LQK, respectively. They are active on 40 to 10 meters, including 12 and 6 meters. QSL to home call.

BRAZIL, PY. Look for PQ1Q to be QRV from Grande Island, IOTA SA-029 until October 18. QSL via PP5LL.

SEYCHELLES, S7. Dr. Singh, S79SBP, has been active on the Family Hour net on 21350 khz around 1740z. QSL to Dr. R. J. Singh, Box 52,

Mahe Island, Republic of Seychelles, Indian Ocean.

HONG KONG, VR2. VR2SS will be active as VR98SS/p from Lamma Island, IOTA AS-006, until October 20. QSL via JK2PNY

BURKINA FASO, XT. Harold, XT2AW, can be found daily on 20 meters using CW beginning around 0000z until about 0300z. QSL via DF2WO.

CAYMAN ISLANDS, ZF. Bruce, N6NT/ZF2NT, is QRV again until April 1999. QSL via N2AU.

JAMBOREE ON THE AIR. Look for W1AW/p, H5ABP, LU3VAL, GB0AAF, TF3JAM, HB9S, K2BSA stations, and other international Scout stations to be QRV for JOTA. Some activity on satellite KO-25 is expected in addition to operations on other bands and modes.

THIS WEEKEND ON THE RADIO. The JARTS WW RTTY Contest, QRP ARCI Fall CW QSO Party, Illinois QSO Party, RSGB 21/28 Mhz CW contest, YLRL YL Anniversary Phone contest and the Jamboree On The Air will certainly keep contesters busy this weekend. Please see October QST, page 108 for details.

3257. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <706dv1$oen@news.Hawaii.Edu>
Source record: 27449
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.digital.misc

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

I use Crownhill Associates (www.crownhill.co.uk) - their 16F84s are 2
quid each!!!! - why both with 555 times at that price :-)

No connection with the company but used them a few times now, always
got very fast courteous service and haven't found a lower price

I have a Heathkit SB-220 2KW linear amplifier for sale. The amp. is in
very nice condition, and has 2 new matched graphite tubes. Manual included.
Local pickup in Sacramento preferred. May drive part way to meet buyer.
Will ship if buyer pays for shipping, and insurance.
$575.00

Hi,
I worked VQ9JC at 1630 on 10/17. I'm kind of suspicious about the QSO,
and I've found very little info on this station on Packetcluster or recent
OPDX bulletins. Is he a resident, or did I get slimmed? (I know, WFWL-the
QSL is already in the mail!) Just curious if he's legit.

SB DX @ WW $OPDX.379
Ohio/Penn DX Bulletin No. 379

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 379
BID: $OPDX.379
October 19, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1EK, N2OO, WB2RAJ/WB2YQH & The 59(9) DXReport, W3HC, W3UR & The Daily DX, N4GN, KP4BH, NN5O, W5AJ, W8KKF, W0YG, 4L5O, 9K2HA, CT3HF, DJ5AV & DX News Letter, G4BUE & DX News Sheet, IK2XDE, LU9AY, UA0SJ and VE3CUI for the following DX information.

3W, VIETNAM. Jani, YB0US/NM6US, will be operating from Vietnam as 3W6US. Operation will be from October 22-26th, this is including the CQWW SSB Contest. Overall operation will be SSB only. Watch 14195, 14260, 21295 and 21360 kHz. QSL via N2OO, PO Box 345, Tuckerton, NJ 08087.

4L, GEORGIA. Omari, 4L5O, will be active in the CQWW SSB Contest as a low power Single Operator/Single Band (3.8 MHz) entry. QSL ONLY via CBA. If anybody is interested in a contact with Omari, send E-mail to: 4l5o@caucasus.net

9A, CROATIA. QSL Manager Mac, W3HC, states that next week will be a good time to work Croatia. Look for 9A1CHP and 9A1CEI to operate as 9A7P during the upcoming contest and during the upcoming months. W3HC will handle the cards direct with postage.

A6, UNITED ARAB EMIRATES. "The 59(9) DXReport" states to look for Frank, DL2CC, to be active as A61AC during the CQWW SSB Contest. QSL via ON7LX.

BJDXC AND SCSDXT JOIN FORCES FOR 1998 CQWW SSB CONTEST. Tim, N4GN, reports in a press release that two major activities have been planned to provide you with Zone 24 contacts on a variety of bands. From Beijing, China, the South China Sea DX Team (SCSDXT) has teamed up with the newly founded Beijing DX Club (BJDXC) and drafted a first-ever Multi-Multi operation to take place from mainland China. The CRSA and Chinese government have allowed the team to use the historic call indicator B1A (Bravo One Alpha). The 6-station affair will use Yaesu FT1000MP radios and Alpha 91B amplifiers with beam antennas. The Finnish operators involved are OH2BH, OH2KI, OH2PM, OH2TA, OH2YY and OH6LI while the Chinese team

consists of BA1AA, BA1AB, BA1AJ, BA1DU, BA1FB, BA1HAM, BA1KA, BA1OK, BG1AC, BZ1DCH, BZ1BM and BA4TB. From Macau, at the QTH of XX9X in the heart of Macau, look for activity by the visiting U.S. group of N6AA, K6JL, K6MC, AB6BH, K5OT, N6ZZ and W6XD together with XX9AS, XX9MD and XX9XF. They will be racing against B1A in the Multi-Multi category. XX9X is a joint contest callsign of A.R.M. Macau, SCSDXT and Alberto Simao, XX9AS, which was used in several activities in the past. The build-up of the station will bring the XX9 signals on the air the week prior to the contest by this group using their own personal callsigns. QSL both B1A and XX9X via Steve Weatley, KU9C.

C6, BAHAMAS. Operators Kevin/N8ZJN/C6AKL, James/KB8YKR, Byron/WA8NJR, Joe/W8GEX/C6AJR and John/WZ8D/C6AIE will be active as C6DX from December 8-16th, from the island of Abaco (IOTA NA-080). Activity will be on 160 meters through 6 meters and maybe 2 meters. Their main focus on this trip will be the ARRL 10 Meter Contest and 6 meter F2, TEP, and E-skip. Their callsign last year was C6AIE. QSL to WZ8D at: John Walker, 1930 Meredith Ln., Loveland, Ohio. 45140-7216 USA.

CP6, BOLIVIA. Mats, LU9AY, reports that he will be signing CP6/LU9AY, from November 25th to December 5th. Activity will be on 160-10 meters CW/SSB. QSL via LU9AY: 670 Honorio Pueyrredon, ZIP 1405, Buenos Aires, Argentina (DO NOT use the old LU9AUY via POB 13, ZIP 1411). Bureau cards are OK.

CQ9, MADEIRA. The team of CT3HK, CT3IA, CT3BD, CT3HF, CT3BM, CT3DL and CT3KN will be active in the CQWW SSB Contest with the special callsign CQ9K as a Multi-Single entry. QSLs via CS3MAD (or CT3 bureau).

E3, ERITREA. By the time you read this, Jacky, F2CW, should be QRT from here and on his way to the southern part of the country. He will not operate from this area, but he will return to his operating location and operate for 4 days between October 21-25th. It has been reported that he has made about 16000 QSOs so far. Jacky will leave next week and head to Djibouti. Look for him to possibly operate as J28AG for 3 days before heading to Nairobi, Kenya.

EL, LIBERIA. The "DX News Letter" reports that EI5GIY is here on a work assignment but wants to become active as EL2VO. Look for him to possibly be active until October 29th. QSL via EI5GIY.

FR/G, GLORIOSO ISLAND. Jacques, FR5ZU, who is only active on SSB, will remain active as FR5ZU/G until October 30th. He was heard this past weekend on 14256 kHz around 0245z and on 28480 kHz bewteen 1245 and 1300z. QSL via VE2NW.

FT5X, KERGUELEN ISLAND. The "DX News Sheet" reports that Helios, FT5XN, will once again be active in January. QSL via F6PEN.

HB0, LIECHTENSTEIN. A Hungarian group consisting of HA0HW/Laci, HA4XG/Geza, HA6NL/Laci, HA6PQ/Tibor, HA6PX/Csaba and HA6ZV/Tibor will be active during this year's HA-QRP Contest (sponsored by Radiotechnika the journal of Electronika), starting 0000z, November 1st, and until 0700z, November

7th. During their activity they will be on 3511 kHz, +/-QRM, 24 hours a day with the callsign of HB0/HA5RT/p (As a QRP station, which means that power input is 10 watts or less). They will operate from Triesenberg at 1400 meters ASL. The operators will use HB0/callsign/p on other bands, mainly on CW and RTTY with TEN-TEC OMNI V, FT-840, GPs and dipoles. Their suggested frequencies are:
CW : 1831, 7011, 10104, 14011, 14026, 18071, 21011, 21026, 24891, 28011, 28026 kHz,
RTTY : 7040, 14086, 21086, 28086

QSL cards for confirmation with HB0/HA5RT/p QSOs should go to HA6NL and for the others should go via their home callsigns.

HI8, DOMINICAN REPUBLIC. The German team of DL1JDK, DL3ALI, DL4JAN, DL4JS and DK8YY will be active as homecall/HI8 from October 21st to November 1st. Their activity will be on all bands CW/SSB. Also look for DK8YY/HI8 to be an entry in the CQWW SSB Contest. QSL via DL4JAN.

INDIAN OCEAN DXPEDITION UPDATE. Charlie, W0YG, reports to OPDX that the callsigns have now been issued for their intended Indian Ocean operation next February. They are VK9XX for Christmas Island and VK9YY for Cocos-Keeling. Operations as VK9XX will be from February 6-13th (1999) and from VK9YY from February 13-20th (1999). W8UVZ, K9FD and W0YG will operate, concentrating on 80/160m, the WARC bands, RTTY and some 6m activity if there is an opening.

J3, GRENADA (Update and Reminder!). Look for J3A to be a Multi-Multi entry in the CQWW SSB Contest. The group is planning six complete stations operating from the Grenada Emergency Operating Center. About one-half of the group will arrive on October 20th and the balance the following day. Expect non contest operating to begin late October 21st. Several members will remain a few days after the contest while most of the operators will return home on October 28th. Participating amateurs are: WA8LOW, W8KKF, NH7C, HN7CC, N0AT, N0KK, W5WW, K5PN, VE3RZ, IK3VIA, DL6LAU, ES7RE, IK6CAC, N6HR and KP2A. Operators' Grenada calls are expected to be J3/homecall, although previously assigned callsigns might be reissued (W8KKF as J37K, WA8LOW as J37L, KP2A as J37A and N0AT as J38AT). Activity will be on all bands, but there are plans for six meters and the WARC bands. Also, a RTTY station will be available. QSLs for J3A should go to WA8LOW. QSL individual callsigns to home call or as announced. Do not, repeat not, send cards to the J3 bureau. Please do not combine mailing of J3A cards (expect J37L,WA8LOW) with cards for the individual oparators. It has also been announced that K2KQ will lead another group in November to activate J3A in the CQWW CW Contest. WA8LOW will also handle the QSLs for this event.

QRP ACTIVITY. James, NN5O, reports to OPDX that between October 26th and November 8th, he will be operating QRP (using a MFJ-9420, 9 watts) on 20 meters SSB/CW. Look for him to be on 14040+, 14160+ and somewhere above 14300 kHz for Generals from IT/, HB9/ and DL/ from hotels/B&Bs and occasionally from his rental car. James states, "Although this is not a rare DX, it should be a pretty good test for all concerned as to what

you can and cannot do with a small, light setup while on vacation in Europe with a little planning."

QSL INFO AND NEWS.....
5R8GC from the Malagasy Republic was Baldur, DJ6SI. His operation ended on October 16th. QSL via his home callsign.

P40N during the upcoming 1998 CQWW SSB Contest is via WJ5DX direct.

LOG Search Server for the August EU-155 operation by the "Project DX Team" A.R.I. Lomazzo (Co) and all of their other activations can be found at the following WEB page:
http://space.tin.it/associazioni/qjber/arilom/project.htm
The QSL cards for the EU-155 operation will be ready during the first half of November.

CW4CC was the special callsign for the Ciudad De La Costa Anniversary of the largest demography increment in the world. QSL via CX2ABC.

SPECIAL PREFIXES. To commemorate the 75th anniversary of the first two-way trans-Atlantic exchange between Amateur Radio Operators", Industry Canada (Canada's FCC) has authorized the use of the following special callsign prefixes from December 1st to December 31st (1998) (normal prefix/special prefix): VE1 to CG1, VE2/CG2, VA2/CF2, VE3/CG3, VA3/CF3, VE4/CG4, VE5/CG5, VE6/CG6, VE7/CG7, VE8/CG8, VE9/CG9, VO1/CJ1, VO2/CJ2, VY1/CK1 and VY2/CK2. "Help take note of a very special event in the history of International Amateur Radio, and work one of these prefixes... 73" de Eddy VE3CUI

T32, EASTERN KIRIBATI. Karl/DL1VU and Gerhard/DJ5IW will be active as T32VU and T32IW respectively starting November 3rd. Karl will be handling the CW action while Gerhard does the SSB part.

VP2E, ANGUILLA. Joe, W1EK, is attempting to operate from the island of Anguilla during the CQWW DX PHONE Contest October 24 and 25th. He has not been assigned a callsign yet. Joe's station will consist ICOM 735, dipoles and maybe a vertical antenna, and possibly an amplifier. The hotel has their own electric generator for public power failures, but Joe is attempting to ship a small 22 LBS generator in case ALL FAILS during the contest. Joe hopes to be active on the air by October 22nd, for a few contacts before the contest. He departs on October 26th, and will make as many contacts after the contest as human energy and coffees allows. You can QSL via W1EK any callbook, or CD-ROM address.

UA0, ASIATIC RUSSIA. Yuri, UA0SJ, reports to OPDX that he is now active RTTY and is trying PACTOR. He is also sometimes on SSTV. If interested in a contact, send E-mail to Yuri at: ua0sj@windoms.sitek.net
All QSOs for contacts with him during the JARTS WW RTTY Contest and the upcoming CQWW SSB DX Contest are to be sent direct ONLY to:
Yuri A. Maltsev, P.O.BOX 2304, Bratsk-city, 665700, Russia / Asiatic /

WP3, PUERTO RICO. Jimmy, KP2BH, reports to OPDX that with a last minute setup due to hurricane Georges, the WP3A team will be active in the CQWW

SSB Contest. The WP3A team consists of: WP3A/Jaime, WP4NHM/Rafael and KP2BH/Jimmy.

ZC4, UK BASE ON CYPRUS. An operator name David, signing ZC4DG, has been active over the last few weeks on SSB. He was heard this past week on 18150 kHz between 1400 and 1430z. There has been another report stating he has also been on 20, 12 and 10 meters (28455 kHz just be 1200z, The Daily DX). His length of stay is not known. QSL via G0OAB.

Source record: 27287

KG4QM is Guantanamo Bay, CUBA. It is the American enclave on the Cuban island. After the Spanish-American war, the US wrestled a "lease" from the Spainards and subsequently the (non-Communist) Cubans for the bay to establish a Naval Base there.

It's a thorn in thier side, but to thier credit, they've honored it.

Civilians, Sailors and Marines stationed or on the base for contractural purposes can get a KG4 call while stationed there. It still counts as Cuba for DXCC, though.

Hi Doug and Group,

A partial correction:>>> As is any KC4 call with a three-letter suffix. (if there are any left!) To my knowledge, the US has never stationed anyone on any of the other South-whatever islands down there, only on the Antarctic mainland<<<

Unless it's been changed, only KC4 calls in the "A" block (AAA thru AZZ) and the "U" block (UAA thru UZZ) are for Anartica.

KC4AAA is the most famous, as is KC4USN. At one time KC4ICE was very active from the ice, but haven't heard from them in a while.

Not true. Because of "separate administration", Guantanamo Bay counts
separately for DXCC.

Which begs the question, how long does the lease last? (I think it
would probably be safe to assume Cuba would prefer not to renew it<g>)

Hello DX'ers.

Recently I worked KC4AAA. I have received his QSL card but I am not
sure
what Country I should tick off for DXCC purposes. I think it should be
Antarctica.

Could someone please confirm or otherwise the above.

regards de Jim ZL2BMH

John,

Are you looking for a list after the contest or before? If before, I'm pretty sure such a list does not exist. You don't need to pre-register to participate and there will probably be many ops who just work a few contacts as their schedule permits. I guess your best bet is to just listen and see <g>.

Mark

Wow, that's a shame. Like you, I packed my gear away in the late 80s, although for different reasons (marriage+kids+school+job=no time). Just recently, when we moved, I thumbed through my old logbooks; comments like "great ragchew," notes about the person's family, interests, etc. abounded. I remembered friends like Ira WA1W (no kidding) and Jim (N1DDU) who were good friends made through ham radio.

In fact, about half of my log entries contain some personal notation about the other ham, indicating that I had acheived some reasonable level of communication with them.

Thankfully, having moved, I threw up a sloper, pulled the gear out of the attic, and am active again on HF.

It is interesting that I so much missed in ham radio what you claim to have never experienced.

Avery

Yep, Antarctica it is. As is any KC4 call with a three-letter suffix.
(if there are any left!) To my knowledge, the US has never stationed
anyone on any of the other South-whatever islands down there, only on
the Antarctic mainland.

(it should be noted that KC4s with 1 or 2-letter suffixes are on the
US mainland)

Conversation is what you make it. If you didn't like the topic, you can change it can't you? People talk about radio's because thats usually the first thing that comes up. I've never had any trouble changing the subject. The part about talking to foreigners I don't understand. I don't talk to them any different than I do stateside. I've never viewed dx stations as cb'ers or children. Just another station as far as I'm concerned. I've spent hours ragchewing with dx. Ever try 160 m? Plenty of interesting conversation on that band. If you hear hams using banal conversation , maybe you should jump in and debanalise it. MK

Maybe one should ask them where their antenna is with respect
to the South pole? Unless it is not placed exactly at the pole
or on a certain meridian (= border between two zones), one
should be able to sort out which zone it is ... SCNR.

Following information from the CQ WAZ Rules should answer most questions about KC4 area zones.
It used to a lot simpler, they all counted for Zone 13.

John, AE5B

"3. Antarctic notes. The boundaries of CQ zones 12, 13, 29, 30, 32, 38, and 39 converge at the South Pole. Stations KC4AAA and KC4USN are at the South Pole, and will count for any one of the listed zones. Most Antarctic stations indicate their zone on the QSL card. A few stations and their zones are: 4K1A 39,4K1B 29, 4K1C 29, 4K1D 38, 4K1E 29, 4K1F 13, 4K1G 30, 4K1H 32, 4K1J 13, 8J1RL 39, CE9 13, DP0 38, FT-Y 30, HF0POL 13, HL5BDS 13, KC4AAC 13, KC4AAD 13, KC4AAE 29, KC4USB 32, KC4USV 30, LU-Z 13, VK0GM 29, VP8ME 38, Y38ANT 38, and ZL5AA 30. This list changes frequently. Questions regarding the zone location of a particular Antarctic station should be directed to the WAZ Award Manager."

> 73 Doug

Doug,
Its been a long time since I was there (1979 as KG4RS) but then they
were talking it was another 20 years till this lease was up. I would
assume that to be 1999. Next year. We shall see. If Castro Croaks
before then the lease might be renewed as its a great source of revenue.

Avery OM,

I could not agree more. Every day, twice a day, I am on the air for 30-45 minutes, morning and evening, on my way to/from work. 40M CW mostly. Almost every day I have a great QSO with someone, and we cover all kinds of ground from family, QTH's, antennas, rigs, weather, bio's, you name it.
This morning on 40CW I got a call from an old friend from 18 years back. We both flew the same kind of airplane (Mooney M18 Mite) years ago, so we had a lot to talk about. Just one example.
There are LOTS of FB ops out there, at least on CW. I can't provide any info re: phone, since I am not a phone man.

73 and Enjoy,
Don, W6JL

3317. need military surplus guy rope

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-21 00:00:00 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <70kd1d$pa1$1@leol.net-link.net>
Source record: 27312

Found 2 surplus military antenna mast guy ropes at a ham fest and need one more for my portable mast.
The rope is green 1/4" nylon about 40 feet long and has a green anodizes locking mechanism on it, a black snap clip on one end about a foot from a small brown "johnny ball" ceramic insulator. There are green anodized metal crimps on the rope at the hook, insulator and a brass crimp at the other end. Was told this went to a 15 meter mast used by the military.
Does any one:
Know the technical military designation for this?
Have an extra?
Know where I can get one?
Thanks, Rudy, K8SWD

3325. Can't we just talk!!!

Newsgroup: rec.radio.amateur.dx
Date: 1998-10-22 00:00:00 UTC
From: RADIOFUN@prodigy.net
Message-ID: <01bdfe02$0a1b6880$8b862581@kc4kmg>
Source record: 27320

Radio's don't list!!

When the VEs turn new hams lose, there is no work done or coaching on what to do, or not to do! That is the problem with alot of this stuff we bitch about day after day.
Here is a list of the new annoyances, that are driving alot of us nuts!!!!!!!! Things not to say.

* The continous asking for a signal report, or how am I sounding, and doing it through a repeater! Referring to a signal report in "pounds".
* 10 codes.....using a repeater, when the person you are talking to, is two cars in front of you!! Referring to a signal +10 or stronger, as the strawberry patch!!! Using Q signals on phone!!!
* Unnessary lingo, such as:
I heard that, I did.....Thats for sure.....making the trip.....I guarentee you..... Channels..... boy, your loud!!!....the constant use of the word, "there".....and the list goes on and on! Why can't we just talk? Do you say all of that on the phone? Whats the next step, testing sessions in truck stops? How about a Ham fest at the weight scales??? Yeah, I know its ridiculous, but none of it would shock me! Oh, and PLEASE refrain from giving "mile markers" over Ham Radio.....geeezzz!!!

KC4KMG

Sorry for the crossposting, I hope no one is offended by it.

I have a TS-820S that didn't come with a manual. I need to know
what pins in the 9-pin connection on the back need to be shorted so I can
use the VFO (the connector that usually does this is missing too!) If
anyone knows about this, and/or has a manual they could photocopy for me,
it would be greatly appreciated!!
Please reply privately via e-mail - I don't always have the time
to comb through the newsgroups. My email: gtmiller@buffalo.edu

Thanks and 73's,
- Greg

SB DX @ WW $OPDX.380
Ohio/Penn DX Bulletin No. 380

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 380
BID: $OPDX.380
October 23, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4GN, KE5BR, KL7J, NA7DB, W0YG, CX1JJ, CX1JK, CX5JF, FR5FC, G4BUE & DX News Sheet, HA/W0YR, LX2AJ, VK6APH, YL2TQ and ZP5MAL for the following DX information.

EDITOR'S NOTE: Due to the upcoming CQWW SSB DX Contest and some additional announcements of stations participating in the contest, I felt that an earlier release of the OPDX bulletin was warrented.

A22, BOTSWANA. Charlie, W0YG, will be returning to South Africa on November 4th. He states that he will probably not operate from there this trip, but he will go to Botswana on November 15th, where he will again be active from his vehicle as A22/W0YG. He will attempt some 80 meters operation when in the bush, but he is not optimistic because mobile antennas on the low bands are more or less dummy loads. Charlie will be on the WARC bands regularly as well as the normal bands, 40 through 10 meters. As before, QSL to W0YG. SPECIAL NOTE FROM CHARLIE: "Please do not include cards from other operations in the same envelope with A22 cards. Send requests for QSL's from other operation in separate envelopes. I do not yet have cards from my recent A22/W0YG or Z21/W0YG operations. While they were ordered immediately upon my return, they have not yet been shipped. I have been assured that I will have these in hand the first of next week, so I should be able to at least get some cards out before I leave."

CP6, BOLIVIA. Olli, OH0XX, will operate CP6AA in CQWW SSB Contest as a Single Op/All Band entry. QSL via Suite 599, 1313 So. Military Trail, Deerfield Beach, FL33442, U.S.A.

CX125, URUGUAY. A group of operators in Salto City will participate in a special event station on October 30th, 31st and November 1st. They will be celebrating the "125 ANIVERSARY" of an important local Institution. They will be active on 2, 10, 15, 20, 40 and 80 meters during the 3 days.

Five stations will be active working on SSB and CW using the special callsign CX125J. Special QSL cards and Diploma will be available. Listen for details. The QSL to: CX-125-J, P.O.Box 164, Zip.Code:50.000, Salto, URUGUAY. NOTE: For any requests, suggestions or more details; write to: P.O.Box:164 Zip.Code:50.000 Salto URUGUAY or by E-mail: tvnet@adinet.com.uy

CX5, URUGUAY. "The 59(9) DXReport" states to look for Jorge, CX6VM, to sign CX5X in the CQWW SSB Contest, most likely on 10 meters. QSL via W3HNK.

E3, ERITREA. Zoltan (Zoli), HA5PP, is currently in Ashmara, and has just received the callsign E30HA. He has been on 10 meters and will try to get on 20-15-10 meters during his stay. At the moment, he is only on SSB, there may be CW later. He is using a TS-50 with some antennas fashioned from tubing and 50 meters of wire and an MFJ tuner. QSL via HA5YPP (his wife).

FS, FRENCH ST. MARTIN. Look for Brian, N3OC, to be active as FS/N3OC from October 27th through November 3rd. Activity will be mainly on 160, 30, 20 and 6 meters. Also, look for activity on 20 meters RTTY. QSL via homecall.

JW, SVALBARD. The "DX News Sheet" reports that Tor, LA9XGA, will be active October 30th to November 4th as JW9XGA from Longyearbyen. Activity will be on CW/SSB 160-10 meters. QSL via home callsign.

JY, JORDAN. "The 59(9) DXReport" states that Ken, K4ZW will be active on November 5-16th as JY8ZW, especially on 160 and 80 meters, mostly CW and 10 meters.

QSL INFO AND NEWS......
QSL information for the following Scouting Callsigns: LX1JAV via LX2AJ, LX9LGS via LX2AJ and LX9KGS via LX2AJ.

TO150 DXPEDITION. Activity is planned on top of "Piton des Neiges", an island off of Reunion, with an altitude about 3069 meters. Activity will last for 3 days. On December 18th, 19th and 20th, look for TO150 (Tango Oscar One Hundred Fifty) to be activated by 10 operators on CW/SSB/RTTY on 160-2 meters. A special QSL will be available. The special callsign is in celebration of the 150th anniversary of abolishing slavery on Reunion Island on the December 20, 1848.

TN, CONGO. Haxel, TN7OT, is back in the Congo doing missionary work for another year. Hazel's home call and QSL route is AL7OT. Her home is Soldotna, Alaska, and she frequently contacts KL7J. She has 100 watts and a dipole and will work a few stations after contacting Alaska usually on her sunset or sunrise.

VK9X & VK9Y, COCOS KEELING AND CHRISTMAS ISLANDS. Jack, HB9TL, and Erwin, HB9QR, will be active on all bands from 14 to 28 MHz as follows:
Cocos Keeling - VK9CTL and VK9CQR October 24th to 31st
Christmas Island - VK9XTL and VK9XQR October 31st to November 14th
QSL direct to HB9QR only - Erwin Fink, Toedistr. 7, CH-8572 Berg, Switzerland with SASE and 2 IRC or 2 green stamps. They request that

when calling, use complete call signs only (PLEASE) - no part callsigns.

VP2E, ANGUILLA (Update). Joe, W1EK, reports to OPDX that his assigned VP2E callsign will be VP2EJR. He will be on island only October 21-26th inclusive.

XR3, CHILE (Update). XR3J will be active during the World Scout Jamboree from December 28th to January 5th. Operators are: PA3BAR, HB9AOF, M0AEU, PA3GVR, ZL2APE, OH2BXB, K2BS, PY2RAR, PU5TAZ, PD1AIL, OZ1JRD, LW4DYZ, LW1ECO, PA3EFR, LX3DL, LX2AJ and G7VFD. QSL via HB9AOF.
Also, look for XR3M to be on the air. Operator will be CE3/W9FW (ex-CE0/W9FW, XT2JB, TU4EI, TU5EV). Special cards will be printed and W3HC will furnish the cards and be the manager.

XW, LAOS. The "DX News Sheet" reports that Shin, JA7SGV, hopes to be active now until October 30th from the XW8KPL club station while working in Laos.

XZ, MYANMAR. The following is a press release by Dan Brown, NA7DB:
"XZ1N will return to the airwaves beginning November 21, 1998, through December 6, 1998. The operation will take place from Yangon, Union of Myanmar. Most of the team are members of the Central Arizona DX Association, with some members of the original XZ1N operation in 1996. This will be a multiple station operation covering 160 through 10 meters including the WARC bands. Modes of operation will be CW, SSB, & RTTY. There will be entries in the CQWW CW Contest and the ARRL 160 meter contest.
CADXA and the team members are very honored to be invited back by the government of Myanmar. Since there have been no other Amateur operations for the last two years from Myanmar, we are sure the DX community will be as excited as we are. The solar cycle upswing leads us to believe this can be a very successful operation. We are also honored to have Bob Brown, NM7M, do our propagation studies.
Original team member WA6CDR, Robin, will be returning and will dedicate the bulk of his time to 160 meters. Planned improvements over his successful 1996 efforts give us great hope for even greater success in 1998. Returning YL operators, Millie, WY7K, Sally, KM5EP, and Jessica, N7ZRD, will give the operation a unique flavor and an added incentive for those seeking YL contacts with a rare country. Mike Bill, N7MB, a veteran DXpeditioner and current President of CADXA, will be active on CW and RTTY.
Additional team members, web site address, propagation information, and other details will be available in upcoming news releases."

YL80, LATVIA. Amateurs from Latvia are allowed to use the special prefix YL80 in October and November to celebrate the 80th anniversary of the proclamation of Republic of Latvia (November 18, 1918). An award is available for contacts made during this period. For further information, please visit the WEB site: http://www.hamradio.lv/

ZF2, CAYMAN ISLANDS. Robert, KE5BR, will be operating under the callsign of ZF2UH again this year from Georgetown, Grand Cayman, from November

6-14th. He will work 40 meters in the early mornings SSB and all bands during the day. During evenings he will work 10 meters, and after a hour or so on SSB he will go to CW (as he states, "the five hams on Cayman don't operate CW and there are those who need CW contacts from ZF-land!"). QSL via KE5BR. SPECIAL NOTE: He will also be operating on the NOVICE CW bands, and asks that no calls other than NOVICES call him while in the NOVICE sub bands. Robert enjoys giving the new comers the thrill of DXing and getting a color picture QSL for their collection. He will QSL all NOVICE contacts as soon as he returns to the states. Robert states, "During the day I will be all over the bands and will be giving daily info to the Kansas City DX Club and the Santa Fe Trail ARC members of my activities so they can put it out on packet. Thanks again and hope those who need ZF will try to get me."

ZP6, PARAGUAY. Juan, ZP5MAL, will be active during the CQWW SSB Contest as ZP6T, Single Operator, Single Band (15 meter, HP). QSL via ZP5MAL. The the Paraguay bureau is also "OK".

MORE CQWW SSB DX CONTEST STATIONS (Quick List). The following was put together from various bulletins (OPDX, DXNS, DXNL, ARRL DX Bulletin, The Daily DX, National Contest Journal, QRZ DX...(ed. GEEE... I hope I named all of them... TNX to all).....

Talking of jargon and slang, once of the most insidious words that seems to be creeping into the VHF community is "destinated". Whoever dreamt this word up? You simply can't change a noun (destination) into a verb (to be at...) by adding "ed" on the end!

When a new Ham says, "CQ CQ CQ ..." on a 2 meter repeater or "OK, 10-4 Good Buddy!" it isn't their fault for saying the wrong thing, they just didn't know the proper ways. However it is the fault of experienced Hams for not helping the new Ham understand proper ways of speaking on the Repeaters.

The best thing we can do for new Hmas is to sit down with them BEFORE they get on the air and show them the proper way of doing things. This critical help may make the difference between someone staying with the hobby and someone woh quickly drops out.

Dear colleaques,

I am a Finnish DX enthusiast for medium waves. E.g. on 720, 945, and 999 kHz I have heard Thai stations that the WRTH does not know anything. I am now searhing some help in order to make my catches identified. Does anyone know any contact with the Thai DXers or some radiohobbist or radioclub which might have any information on Thai DXing? Any information on the web sites regarding Thai MW stations would be very much appreciated.

There has always been someone willing to correct our mistakes. Protocol, socially correct, etc. What is important? Two people conveying mental images to each other. What difference if it is 'over', 'roger', 'back to you' or even 10-4 for that matter. Was information conveyed and understood?

Bob,
You're right and I couldn't agree more. When I got my ticket
2 1/2 years ago, I really had no idea what to do. Having some
friendly advice would have been a big help. I really felt lost
and bewildered in the beginning. I wasn't a club member (my
hours prevented me from meetings, nets, etc.) and I had no
friends or family that were hams.

But I have to also say this: I LISTENED for 2 whole weeks
before I ever said a word on a repeater. Part of this was
due to being MikeShy, but it was also because I wanted to
learn how things were done before I started flapping my
soupcoolers. One certainly doesn't have to listen as long as
I did, but being just a bit less Alligator and a bit more Rabbit
certainly can help! ;-)

Ed
3V8BB is a "guest operator" station and the last one out the door
apparently turns out the lights and takes the logs with him. So you need to
make note of the date,time,mode, etc. and do a search on the various qsl
sites on the web. If it was a major contest operation, you should find it
fairly easy, Otherwise, it is a crapshoot.

Good Luck
John

Do you have a 10M beacon in operation? Or do you work
10 meters on a regular basis while using the beacons between
28.300-28.175? If so then your help is needed to maintain
the 10M beacon page on the Lehigh.Edu server.

Bill WJ5O would like to have your help in keeping the
10 Meter Beacon Page as accurate as possible. He is taking
over the job to keep it updated as commitments at home have
left me without the time to do updates in a timely fashion.

If you have your Web page linked to it, there is no need to
change anything as the URL address will remain the same.
The only change will be in the person doing the updates.
Several of you have been a great help in the past. I just
hope that you will continue to give Bill the same assistance.
Bill has two addresses that you can reach him at:

(please take note of the anti-spam device used)

wj5o *at* juno.com or wj5o *at* worldnet.att.net

Bill will be posting his updated version in the very near future. You
will know when it is posted because the info at the top will reflect
his call (WJ5O) sign instead of mine.

You can view the beacon page at:

http://listserv.lehigh.edu/lists/tenten-l/beacons.html
(or you can get the plain ASCII version at:)
ftp://ftp.lehigh.edu/pub/listserv/tenten-l/dx/beacon.list

It would seem that the problem being complained about is that the
newbie *is* listening to SW first and picking up his bad operating
habits there.

I agree with most comments except for "Channels". I have programmed all our family's 2M radios to the same frequencies, so it's easier to say go to "channel 6" than trying to find "147.240+ (103.5)" in the memory banks. Unprofessional, no - the fire and police use "red", "channel x", "tac-1", etc.

I would not consider it unprofessional; but it sure sounds strange! Consider the individual, who when talking to the power boat owner, says he is going to fire up the engines and run down the river. What he really means is that he is going to put his oars in the water and row his boat because he only has a rowboat. Sorta makes him sound like a wannabee!

Yea! I really don't understand why any ham would want his/her XYL/OM and/or harmonics to get Tech Light licenses so they can talk over family matters on 2 Meters. If the spouse is genuinely interested in becoming a ham then fine. But when did this family radio service become in vogue? After the no-code license I guess.

Far be it for me to judge, but my wife has absolutely no interest in becoming a ham and I would never have her get a no-code license just so we can BS on 2 meters. Our private lives are our business (where have you heard that before?).

Fallin' off the soapbox.

de Mike K3FH

I believe that this actually means "I will QSL to you on receipt of your card." If you don't send a card you won't get one back.

This makes a fair bit of sense if you've been on the air for 40 years, and you work a G station (for example). It can safely be assumed that you probably have a box full of cards from G, and aren't really interested in collecting any more. If the person you worked said 'QSLL' then you know you won't get yet another G card unless you request one from him.

> But when did this family radio service become in vogue? After the no-code
> license I guess.

Lessee - we can't use ham radio to communicate between family members
(the "nor is it FRS" line, above). We can't use language other than that
clearly established by old precedent (the original poster's assertion).
We're not allowed to ask how our signal sounds (even if, say, we're testing
a newly-repaired mike). We can't give our location in mile markers (earlier
poster to this thread). It's unacceptable to say 'CQ' on a repeater ...
the "acceptable" way is to announce you are listening. Anyone who's a
mere "appliance operator" is condemned - regardless of their aspirations
(we all started out as experts, right?). Shame on you if you refer to
specific, commonly-used frequencies as "channels". Oh, and if you manage
to ascend the heights to the HF bands, don't ask "what country are you
in?" To do so proves that you don't know all the prefixes and don't have
DXCC tables near at hand. You prove yourself unworthy.

I'm sorry, but you folks clearly have far too much time on your hands if
you are worrying about tripe like this. Get a life. Then start HELPING
the newbies.

It's a newsgroup, dude. Express your opinion (as you did above) but opinions are like rectums, everyone has one! What are you trying to do with your limited time? If you don't like the discussion then fine, but don't try to squash anyone else's thoughts.

No one is saying "you can't...." except you! If you like things the way they are then fine, but all of us don't have to agree with YOU, dude!

>I'm sorry, but you folks clearly have far too much time on your hands if
>you are worrying about tripe like this. Get a life. Then start HELPING
>the newbies.
>

You help the newbies, dude, instead of wasting space. If you have a comment to make then fine, but don't just sum them all up as tripe. Since when has free speech been banned?

Here are a few more goofy things hams say. I didn't even think much about it until my wife was in the shack one day and asked me what they were talking about.

Reading the mail
Running barefoot
Tie the ribbons on it
Got my boots on

And there are more I can't think of right now.

i am looking to these news groups in hopes that someone is able to get information for me out of Roatan, HOnduras. My father is the owner of The Executive Inn, and has several guests from a few other hotels on the island. I have not spoken to my father since late Monday. If any one is able to get through, please let me know, as my family is deparately trying to get information, in addition there are family members of guests that are at my fathers hotel, looking to me to get them informaiton.

Any help will be greatly appreciated.

To all radio amateurs

SB DX ARL ARLD043
ARLD043 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, 425DXnews, DXNL, The Daily DX and Contest Corral from QST. Thanks to all.

TANZANIA, 5H. Dave, 5H3US, has been working US and European stations on 18076 khz around 1725 to 1810z. QSL via WA8JOC.

MADAGASCAR, 5R. Ake, SM7CIP, will be QRV as 5R8FU for at least one more year. Some RTTY activity is expected with operations on 160, 80 and 40 meters as well. QSL via SM0DJZ.

ANTARCTICA. The Japanese Club station 8J1RL located on Ongul Island, IOTA AN-015, has been QRV on 15 meters from 0920 to 1010z. QSL via the bureau.

COMOROS, D6. Herman, DJ2BW will be active as D68BW with an emphasis on 12, 17 and 30 meters as well as the lower HF bands. He will be here until November 7. QSL to home call.

ERITREA, E3. Zoltan, HA5PP, is currently active from Asmara as E30HA, and is operating on 20, 15 and 10 meter SSB. QSL via HA5YPP.

SAINT MARTIN, FS. Brian, N3OC, will be active on 160, 30 and 6 meters, and 20 meter RTTY as FS/N3OC until November 3. QSL to home call.

ECUADOR, HC. Uwe, DL2YAK, will be active as either HC5UK or HC5/DL2YAK until November 22.

DJIBOUTI, J2. Jacky, J28AG, was working US and European stations on 18073 khz around 1540z. QSL via ZL3CW.

SAO TOME AND PRINCIPE, S9. Chris, HB9CYV, and Martin, HB9CYN, will be QRV as S92YV and S92YN, respectively, using CW and SSB on 80 to

10 meters until November 7. QSL to home calls.

SABLE ISLAND, CY0. Wayne, VE1NR, is working on Sable Island until about November 1. He is active on 80 to 10 meters SSB, and will be QRV as CY0NR in his spare time. QSL to home call.

COCOS KEELING ISLAND, VK9C. Jack, HB9TL, and HB9QR will be QRV as VK9CTL and VK9CQR, respectively, on 20 to 10 meters until October 30. QSL to HB9QR.

CHRISTMAS ISLAND, VK9X. After their VK9C operation, Jack, HB9TL, and HB9QR will be QRV from here as VK9XTL and VK9XQR, respectively, from November 1 to 13 on 20 to 10 meters. QSL to HB9QR.

ALBANIA, ZA. Mike, ZA1MH, is active until December 1. QSL via Z32KV.

THIS WEEKEND ON THE RADIO. The BARTG RTTY Sprint and the HSC CW Contest are all scheduled for this weekend. Please see October QST, page 108, and November QST, page 97, respectively, for details.

> de Mike K3FH
>

If a ham husband has his wife get a license, just so that they can chat over 2 meters (or any other Tech Band), it's NOT against the FCC rules. I know of several hams that have done that. The bottom line is, it's not illegal and whatever makes them happy. <smile>

My wife has no interest in talking over ham radio, so I didn't push her to get a license. Still, it would be nice if she did have one. My sons, took an interest in getting their licenses and did so last year. The yonger boy, James (KF6LRN) age 12, is on the air a limited amount. However, my older son, Michael (KF6LJA) age 16, is on the air several times a week. Most of the time, we chat as I drive home. But he does help me when we work events and with emergency communications. (We both belong to groups that support emergency communications.)

FRS (Family Radio Service) has nothing to do with Ham Radio. The FRS frequencies are a little higher than the 70cm Ham Band and don't require a license or any ID. Radio Shack was the main force that pushed the FCC to create FRS. While FRS came to exise after the "No Code" license came out, this is NOT a case of cause and effect. There is just no connection where one event caused the other.

73,
Bob

Joe,

We use digiboards modle PC/xE. This will add 8 ports with
onboard processor and ram to keep up with high speed data on
all ports. It uses onlt 1 IRQ. They also make a 4 port board.

OK...I missed a good one it seems...what is wrong with announcing location
by mile-markers???

This ought to be a good one..

But truly, CQ on a repeater sure sounds stupid.

I've been known to turn my repeater off when someone did that.

-George Csahanin WB2DYB/5
Dallas, Republic of Texas

We can't give our location in mile markers (earlier
>poster to this thread). It's unacceptable to say 'CQ' on a repeater ...

Make sure whatever software you're using can use ports using non-standard addresses and IRQs.

Digi makes a variety of boards with drivers for various operating systems. Don't recall the upper end but it's over a hundred. Used to run 30 users on a 486 using their products. For more information try <www.dgii.com> (note, that is not a typo).

I'm a "newbie" myself-
so far I've seen a hundred ways not to-

and have not seen one way to.

I have no idea what the country codes are- I don't know the "right" way
to use or not use a repeater-

So I'm gonna recommend to all my friends that the years of study Ive put
into getting my License has been a total waste.

IOW radio for sale-

Hi there!

Can anyone advise me on a downloadable QSL info database (for free... if possible).

Please tell me the url and/or the name of the database..

It's meant for SWL'ing HAM radio stations

Thanks a lot

Perhaps I'm disqualififed from
talking about the "good old
days" (I'm less than 60 years
old, never had a QSO with
HPM, and got my license as one
of those newfangled
Conditionals.

My "good old days" started in
the early 60's, just 35 years
ago, but here is what I
remember.

.... hams didn't bicker with
each other about who was more
"deserving" than another.
Nobody got a special deal
because
they could beep faster or
remember more electrical
formulae
than someone else. I got my
Extra in 1963, well before
disincentive licensing, and it
was simply just another
personal
accomplishment, and did not
"elevate" me above other hams.
We
all shared the same spectrum,
worked together to solve the
same
problems, competed in
contests, trouble-shot each
others radios,
and generally had fun
together. If you forgot the
numbers for
the dipole formula, it was OK
to ask someone else. If your
Morse speed was 10WPM the
speedier guys would slow down
for you,

not QSY to some specially
reserved band segment. The
one or two
"old timers" on 75 meters who
didn't like newcomers ("No
lids, no
kids, not space cadets") were
universally looked down on as
poor
examples of what a ham ought
to act like. The Novice bands
were
a "cacaphony of exhuberance"
to steal a term that K1ZZ used
in
a meeting yesterday here in
Minneapolis. Old hands were on
those
Novice bands also -- it was
not unusual to hear W4KFC or
W5ZD
patiently working WN4KKN or
WV2CNL -- nobody remarked that
it
was "nice" of them to do
that -- it was just part of
being a
good ham. The notion that you
had "earned" your license
never
occured to anyone -- we were
just excitedly "playing in the
ether", and there was no
distinction on the air between
Extra,
Advanced, General, or
Conditional -- elitist special
callsign
formats to celebrate the fine
granulations of your testing
skills
had not been invented.

Today we are sliced and diced
into 6 different classes,
carefully
divided into our own special
frequency segments, and Lord
protect
the Extra who suggests that a

new Technician, who didn't pass his exam in front of a bored and stern FCC clerk, might have something to contribute to our beloved Amateur Radio service.

I respectfully propose that all current six license classes be scrapped and replaced by two new classes "Beginner", and "Helper of Beginners".

I use the STB 4COM card with reasonable success.
This was an under $100 card that provides four serial ports.
You can use the standard I/O and IRQ with these, or select
four new settings (from a limited group). If you are careful,
you can use your standard two from the PC and four from
here for six serial ports. It can also do LPT, but I never fooled
with that. Never had a need for more than one LPT. I would
use a switch if I did.

SB DX @ WW $OPDX.381
Ohio/Penn DX Bulletin No. 381

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 381
BID: $OPDX.381
November 2, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W2FG, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, WD4NGB, W0YG, BV4AS, BV4FH, DJ5AV & DX News Letter, DL1HCM, EA3BT, F6AJA & LNDX, G3SXW, G4BUE & DX News Sheet, G4UOL, HA0DU, JM1LJS, ON4VT & Picture DX Bulletin, OZ5AAH, RA1QHJ, RA0FF, RW3AH, SM7CQY, SP5UAF, SV1NA, US0SJ, VK2ICV, YS1RR and ZL1RS for the following DX information.

3W, VIETNAM. Eugene, RA0F, reports to OPDX that Coly, UA0FM, will be active again from here as 3W5FW during the middle of November. Coly's equipment is a TS-520 (near 180W), ICOM-700 and FURUNO (marine TX for HF, 400W), 2 element Quad for 20/15/10 meters and a for 40/80/160 meters he uses a GP's. Coly does not have antenna for the WARC bands, but he will try using his Quad with tuner. On 160 meters, look for him on 1826 kHz and RX +3 up (1400-1500z to USA, 1930-2030z to EU and at his sunrise at 2300z. QSL via: P.O.BOX 66, Vladimir, 600011, Russia

5N, NIGERIA. Bogdan, SP5CPR, will be active as 5N3CPR once again. He will be here until the middle of December. He will be active on all bands. The QSL route is OK via his Polish callsign via the bureau, "he prefers bureau confirming".

5R, MADAGASCAR. The French DX Bulletin "LNDX" reports that Andre/F6AOI, Alain/F6BFH, Bernard/F9IE and their wives will be in 5R-land from November 15th to December 7th. They will try to be active from Sainte Marie Island and Nosy Be (both are IOTA AF-057). Activity will be on all bands CW and SSB.

5R, MADAGASCAR. "The 59(9) DXReport" states Ake, SM7CIP, will be active as 5R8FU for at least one more year. His activity includes RTTY, but he is currently putting up antennas for 160, 80 and 40 meters. He was heard this past week on 28485 kHz arouns 1315z. QSL via SM0DJZ.

9Q, DEMOCRATIC REPUBLIC OF CONGO (ex-Zaire). The "DX News Sheet" reports that Pat, 5N0T, and XYL Nicole, 5N0YL, who are waiting for licences, report an application for the Association of the Radio Amateurs Operators of Congo was made to the Government in Kinshasa in September. Approval is awaited from the Minister of PTT, and then licences should be issued.

AFRICAN ACTIVITY. From the "Picture DX Bulletin", ZS6HZ states he will be traveling to Arusha, Tanzania (5H), at the end of November, early December, 1998. He will also be traveling through Zimbabwe (Z2) and Zambia (9J). The actual dates are still unknown, but ZS6HZ has to leave South Africa on November 27th and has to be in Tanzania on December 5th. He is guessing that he will be in Zambia around November 1-3rd and again around December 9-11th. Callsigns are also unknown at this time as he is trying to obtain license for these three countries. He states that he would like to operate SSTV from these countries as well as SSB. Expect signals to be weak because he will be operating from a vehicle using dipole antennas.

BV9P, PRATAS ISLAND DXPEDITION. The following was from a press release on the upcoming BV9P operation which takes place 0600z November 12th through 0000z November 19th. Operators will be as follows: BV2KI/Bruce, BV2KS/Evan, BV2VA/William, BV4AS/Jimmy, BV4FH/Paul, BV4ME/Chung, BV4QA/Ou, BV7FC/Lieon, JA1BK/Kan, KU9C/Steven, OH2BH/Martti and the first YL ham on Pratas XE1CI/Nellie. Suggested frequencies:

CW - 1885-1905, 3505-3515, 7005, 10135, 14055, 18085, 21055,
24895 and 28055 kHz
SSB - 3795, 7055, 14195, 18125, 21295, 24495 and 28495 kHz
RTTY - 3550, 7030, 14080, 21080 and 28080 khz

QSL Manager will be KU9C. Those wishing to contribute financially to the BV9P operation, send your contributions to:
Chinatrust Commercial Bank Feng-Yuan Branch P.O. Box 163
#341, Chungshan Road, Feng-Yuan city, FENG-YUAN City
Taichung Hsien, Taiwan R.O.C. -or- 420 Taiwan R.O.C.
Account Name: Chiang Hui-Yu (Paul Pai/BV4FH)
Account No# 392-13-13826-06

E3, ERITREA. By the time you read this the "Space A DX Group" should have arrived in Asmara, Eritrea, the nights of November 3rd, and 4th. They will make every attempt to be active starting during the day of November 5th. They cannot get their callsigns until they are in Eritrea, but they were told it would be assigned starting at E30AA and up. They will use only one call unless required to use each operator's call. They will be active until midday of November 17th, and fly out just after midnight the morning of November 18th. With the added $500 dollars cost per operator for the license, and the recent activity from Eritrea, they have scaled down to 10 operators. They are: WD4NGB/Bruce, KO4RR/Joe, N5VL/Vance, IV3FSG/Elvira, I8NHJ/Max, EA8AFJ/Michel, OK1TN/Slavek, N9NS/ Mike, NF6S/Larry and DJ9ZB/Franz. They plan on operating 3 stations 24 hours a day. This week's complete/unedited press release will be sent to all OPDX InterNet Subscribers as an additional bulletin.

E3, ERITREA. Zoli, HA5PP, continues to be active as E30HA, reportedly making over 7000 QSOs so far. He is trying to put up something for 40 meters, so keep a lookout for him there. Also, he is going to try to be active on CW. He wants to stay until November 8th, but he may go back with better equipment just before the CQWW CW Contest. In between, he has plans with Yemen. QSL via HA5YPP: P.O. Box 1157, Budapest, H-1245, Hungary, Europe

GD4, ISLE OF MAN. Steve, G4UOL, will be active as GD4UOL on CW only on all the HF bands from 2000z Friday, November 20th to around 1600z Friday, December 4th. QSLs should go to the GD bureau rather than his home callsign as this speeds up the process. QSLs direct are via his home callsign of G4UOL. Skeds via email are welcome outside the contest. Send them to: steve@g4uol.demon.co.uk
Steve expects to concentrate this year on 18 and 24 MHz, as long as the bands produce QSOs. More information about his previous trips can be found on his WEB pages at: http://www.g4uol.demon.co.uk
In the CQWW CW Contest he will be Single Op/Low Power, unassisted.

HI8, DOMINICAN REPUBLIC. Another Bavarian Contest Club (BCC) operation will take place from as DL1HCM/HI8, from November 24th until December 6th, from Samana Peninsula in the northern part of the Dominican Republic. Mike, DL1HCM, will be an entry into CQWW DX CW Contest as SOP/all band/ high power. Outside the contest the main emphasis will be CW on 160m, 80m and WARC bands. Mike states, "I will take a microphone with me for SSB operation, but please don't expect too much, I am a very untrained SSB operator." QSL to DL1HCM, via bureau or, direct to: Mike Peters, Moislinger Allee 72, 23558 Luebeck, Germany.

LA, NORWAY (Special Suffix). Ben, OZ5AAH (ex: OY5IPA,OX3IPA, TF/OZ5IPA+), will be active as LA/OZ5IPA from Oslo, Norway, November 6-9th. He will also be an entry in the IPA (police) Contest (Nov. 7-8th). Ben works all bands CW/SSB. He will be "OK" for most police awards. See the photo in "CQ-magazine", July, 1997. QSL direct only to: PreBEN Jakobsen, 9 Knoldager, DK-2670 Greve, Denmark.

PACIFIC DXPEDITION (Update). Last week we reported that Karl/DL1VU and Gerhard/DJ5IW would be active this week from T32-land (Christmas Island), but this is just a start of a string of activities. The "DX News Letter" reports that Gerhard, DJ5IW, will return (not sure where) on Decemeber 1st, but Karl will go on and travel to the following: Kanton Island signing T31AF, to Western Kiribati as T30CT and to Banaba as T33VU. More activities are planned, but they will depend on the transportation facilities. All QSLs via buro for T32IW/T32VU via DJ5IW, all others via DL2MDZ.

QSL INFO AND NEWS.....
PY1MF/P DXpedition to Ilha Grand Island (SA-029) can be QSLed via the bureau or to PY1MF.

Andy, RW3AH, reports that a new WEB site is now active for the 1997-1998 9X0A DXpedition. For QSL information and details on the 9X0A operation, check out the address: http://www.qsl.net/9x0a

NOT ME! Roger, G3SXW, informs OPDX that the callsign YA1R was issued to him in 1970. Many QSL directories/lists currently list Roger's callsign and his QSL Manager at that time, G3TXF. Roger reports just recently he has received inquiries about YA1R who has been active this month, and he has started receiving direct QSL cards. Roger states, "This is not me! I have not been in Afghanistan since 1973. Sorry - I know nothing about this operation and cannot help with information or QSL cards." -- 73 de Roger/G3SXW.

QSL information, photos and a story about the RA1QQ/1 Russian Arctic Islands IOTA expedition (July 25-28th, 1998) can be found at the following WEB site: http://www.geocities.com/pentagon/bunker/4755

Bernie, W3UR, Editor of "The Daily DX", reports that on October 30th, he mailed out all the A61AJ bureau QSLs (3,000+) to the ARRL out going QSL bureau. He is still missing logs from April 1, 1998 to date, November 26, 1996 to November 22, 1997, and logs prior to November 17 1996. He does have logs for these dates: November 17, 1996 to November 25, 1996, November 23, 1997 to March 31, 1997. All direct requests for these dates have been mailed out. Anyone still needing a QSL may send to: Bernie McClenny, W3UR, 3025 Hobbs Road, Glenwood, MD 21738, USA Bureau cards get answered once or twice a year.

Josep/EA3BT and Nuria/EA3WL report that their activity from Martinica logged 7085 QSOs in just 6 days of operation, during which they were active on all modes (SSB, CW and RTTY) with the callsigns FM/EA3BT, FM/EA3WL and TO8B (during the CQ WW SSB Contest). Their logs are now available at: http://www.redestb.es/personal/j_gibert
Their WEB page will be updated with their operation as soon as they get some pictures processed. Remember that the QSL route of all the 3 callsigns is: Josep Gibert, Col-legi, 1, 08800 Vilanova i la Geltru, Spain

Charlie, W0YG, reports that all direct requests to date for his A22 and Z21 operations, were answered as of October 30th. PLEASE NOTE: Charlie states that he has been getting lots of requests with IRCs that are "not stamped". Please make sure your IRCs are stamped (refer to OPDX.370.2 and OPDX.371). Charlie states that he cannot use unstamped IRCs, so he will return those cards via the bureau.

SILENT KEY. Egene Korotkov, RW0AY, became a Silent Key on October 7th. Egene enjoyed working DX and designing radio equipment. Condolences to his wife and family.

SK7, VEN ISLAND (Rare Swedish Island, IOTA EU-137). A group of 9 operators from the Swedish DX-club SSRA (SM7AVZ, SM7BCX, SM7CQY, SM7DAY, SM7DDR, SM7DXQ, SM7EQL, SM7MPM and SM7NGH) will operate from this island from 1500z on November 6th to 1300z on November 8th. Theu will use the callsign SK7DX. Two stations will be active: One station consisting of IC-765, Drake L4B and a 3 element tribander; the other one with a Kenwood TS-570 and a R7 vertical. Both stations will be on the air around the clock. Listen for them on the normal IOTA frequencies. QSL to SM7DXQ direct: Mats Freden, Klagerupsvagen 258. S-21232 Malmoe, Sweden or via the

bureau.

TM5, FRANCE. The LNDX reports that Dominique, F5SJB, will once again be active as TM5CW from November 27th to December 7th. He will participate in the CQWW CW Contest.

TY, BENIN (Just a reminder!). Look for the German team of Sigi/DL7DF, Tom/DL7BO & YL, Frank/DL7UFR and Tom/DJ6TF to be active this week from November 4th to November 17th. They will operate especially on the low bands and on CW, but SSB and RTTY are also possible. They will use 2 complete stations. Look for them on the usual DX frequencies. QSL via DL7DF.

VK9C, COCOS-KEELING ISLAND. Hide, JM1LJS, informs OPDX that he will be going here December 26, 1998 to January 2, 1999. His callsign will be VK9CL. Hide will operate on 80-10 meters bands CW/SSB/(FM). He states that his operating station will be a "simple system" due to the weight limit of the airplane: 400W+DP or GP. Hide adds that from January 2-4th, look for him to use VK6SJS. If you hear him sign VK6SJS/HRP on January 3rd, his QTH is the "Hutt River Province" (He states there is no credit of DXCC for this location). QSL infomation is as follows: Hideyuki Kai, 4-22-15, Takata-Higashi, Kohoku-ku Yokohama-City 223-0063, JAPAN (Please note: Address was changed and the callbook address is not correct.)

VK9L, LORD HOWE ISLAND. Plans are well underway for a DXpedition to Lord Howe Island between November 22nd and December 1st. The callsign to be used will be VK9LX. It has been reported from a press release that the bulk of the equipment has arrived, and the team members are signed up. The team leader is Nick, VK2ICV. The other team members are: Bill/K6KM, Charlie/N0TT, Ray/N4RU and Mary Lou/NM7N. The DXpedition has two purposes: to provide a DX contacts with Lord Howe Island and to participate in the CQWW CW Contest. Before the contest they will be operating 2 stations on all the HF bands, including the WARC bands and 160 meters. Operations are also planned for 6 meters. Modes of operation will be CW, SSB, and RTTY. Before the contest they will be emphasizing operations on the low bands and WARC bands, propagation permitting. During the contest they will be operating as Multi/Single working all HF bands except the WARC bands. Propagation information for the various bands has been prepared by Bob, NM7M, and is available on the VK9LX WEB site. QSL via VK2ICV, Nick Hacko, P.O.Box 730, Parramatta, NSW 2124, Australia. For further information check the VK9LX web site at: http://qsl.net/vk9lx
E-mail for the DXpedition can be sent to: vk9lx@qsl.net
Those wishing to contribute financially to the DXpedition to help cover shipping costs, etc. should check the web site for information on where to send donations.

VU4, ANDAMAN AND NICOBAR ISLANDS. Ted, W2FG, reports that Nat, VU2NTA, is now making another attempt to try to obtain permission for a VU4 operation. Nat states the the going is pretty tough with the government, and they are "very unsupportive on the matter", but he is hopeful. He (Nat) has requested for all DXers to send him an E-mail showing their callsigns requesting the activation of Andaman & Nicobar Islands by

Indian amateurs. (PLEASE NOTE: Nats states, "THAT ANY REQUESTS TO JOIN THE EXPEDITION BY NON INDIAN HAS and WILL DEFINITELY MAKE THE EXPEDITION A NON STARTER!!!!!!) For support, Hams/DXers are to mail their requests to Nat at: vu2nta@amsat.org

YA, AFGANISTAN. The "DX News Sheet" reports that Mike, K5KWG, is trying to obtain permission to be active during his regular work trips. However, Mike is currently active in a Albania until December 1st as ZA1MH. QSL via Z32KV.

ZK3, TOKELAU. It seems that Ron, ZL1AMO, was not able to book passage on the boat to the island to operate as ZK3RW during last week's contest. Reports indicate that he will try again this week.

ZL8, KERMADEC. Bob, ZL1RS, has announced to look for ZL8RS to be active from the Kermadec Islands, November 9-17th. Bob states that he intends to focus mainly on 17/15/12/10 meters SSB with some slow CW on 30 meters. Operation will depend on his work schedule. QSL via ZL1RS (R Sutton, 109 Wright Rd, RD2 Katikati, New Zealand). To see photos from Bob's last trip, check out the WEB page: http://www.qsl.net/zl1rs

Rose colored glasses? I remember a net called Westcars (West coast amateur radio service) that operated in CA in the early 60's. It was on the same 40 meter freq day in day out and arranged mobile and phone patch traffic. The malicious interference and bickering that went on rivals what you hear today.

3422. Need address of WD5CSK

Newsgroup: rec.radio.amateur.dx

I am finishing up the USA and Canada certificates for the 1997 CQ WW 160 and cannot seem to find WD5CSK of Oklahoma. I have two addresses that are no longer any good. Has he changed calls, become a SK or what? There is no record of WD5CSK on any current FCC data base even under his name.

Anyone have an answer?

Dave K4JRB

Subject: PCH Closing

All,

I am posting this on uk-vintage because there must be a number
of you who have worked with PCH on regular basis in the past.

73's

Jan

October 1998

Dr OM/YL/XYL
The Dutch Landstation for the Maritime Mobile Service
"Scheveningenradio/PCH", founded 19 december 1904 is going to
close service 31 december 1998 15.00 UTC. At this moment of
sadness to the personel they don't think of contacts with
others, but at the anniversary day december 19th they will
give a FAREWELL PARTY on the air. The Dutch gouvernment agreed
to use the coaststation frequencies to make contact with
radioamateurs in their bands primarily for (ex-)Radio Officers
to say good bye. Cross Band as usual on HF Maritime Mobile
Service! But any licensed station is invited to join the party
and make a QSO on one of the last days of PCH: The schedule
is: 19-12 17.00 UTC - 20-12 07.00 UTC CW on one the following
frequencies depending propagation conditions with the callsign
of Scheveningenradio: PCH . .: 4250 kHz PCH20�� -�� 3525 kHz
+/- QRM 8622 kHz PCH41�� -�� 7025 kHz 12799,5 kHz PCH51 -�
14050 kHz 17198,9 kHz PCH61 -� 18085 kHz

19-12 08.00 UTC - 20-12 08.00 UTC there are also stations on
air with callsign PA6PCH: SSB on 144,315 MHz SSB on 3670 kHz
and on the HF-bands the clubstation of the Radio Club
Kennemerland PI4RCK is also on air with the PCH call (PA6PCH).
For every station making QSO with one of the FAREWELL PARTY
stations there is one special QSL card but it is not a CONTEST

Regards and cuagn 19-12

All at PCH & PI4RCK

Here`s the original>
Dear radio enthousiasts,

For 94 years Scheveningen Radio (call sign PCH) has operated
the dutch radio service for matitime radio stations al over
the world. With its roots in the earliest days of wireless
communication it is one of the longest established maritime
radio services in the world.

Sadly, as communicationstechnology has moved on over the last
century, so have the needs of users. So, from january 1st 1999
the station is closing down permanently.

As a last event and especially for radio amateurs the world
over, Scheveningen Radio PCH will be holding a radio amateur
'farewell day' on its 94th anniversary.

>From 08.00 UTC on december 19th 1998 until 08.00 UTC on 20th
>december 1998,
w're inviting radio amateurs to contact the station on several
bands (frequencies shown below). All these bands will be
monitored by our radio operators throughout the day.

2 metre band
Time - 0800 UTC 19/12/98 until 08.00 UTC 20/12/98
Callsign - PA6PCH Frequency - 144,315 MHz Mode - Voice SSB

80 metre band
Callsign - PA6PCH Frequency - 3690 kHz Mode voice LSB

Shortwave telegraphy
Frequencies: PCH TX PCH RX
pch20 (4250 kHz) 3525 kHz (+/- QRM)
pch41 (8622 kHz) 7025 kHz
pch51 (12799,5 kHz) 14050 kHz
pch61 (17198,9 kHz) 18085 kHz
There wil be four different CQ calls on channels not in use,
indicating the channel currently in use CQ de PCH41/51/61
Farewel Radio Amateur Day call 3525 listen on 4250 kHz CQ de
PCH20/51/61 Farewel Radio Amateur Day call 7025 listen on 8622
kHz CQ de PCH20/41/61 Farewel Radio Amateur Day call 14050
listen 12799,5 kHz CQ de PCH20/41/51 Farewel Radio Amateur Day
call 18085 listen 17198,9 kHz

Time - 1500 UTC 19/12/98 uintil 0700 UTC 20/12/98
Mode - CW
Callsign - PCH

The farewell day has been specially approved by the Dutch
Radio-communications Agency. Radio amateurs outside The
Netherlands should check the conditions under which their
license has been granted. In some countries this cross band

operation could be prohibited

It'll be a day to combine both sadness and fun. We look forward fo hearing from you

Best regards, All at Scheveningen Radio/PCH

Stupid yes, but it wasn't their idea, it was the fcc's. The arrl just
took the ball the fcc threw at them and ran with it. It was pretty much
forced down their throats. MK

Knowing how the FCC works, your statement is kind of humorous.

The FCC endorses the ARRL proposals. The ARRL showed them
that incentive licensing was the way to go, and the FCC rubber stamped
it. The same with the Spread Spectrum rules. The ARRL wrote them,
the FCC rubber stamped them, it is now law.

The ARRL is writing new rules for 5 wpm General (seeing how they are
dying off faster than people are upgrading) and the FCC will rubber stamp
that as well. The ARS is not that important a service for the FCC to
staff and spend real money on.

If Joe Blow petitions the FCC, his proposal is stamped "premature." If the
ARRL send in the same proposal, it is made the law. It's not that the ARRL
is any better/smarter than Joe Blow, it's just a way of doing business
cheaply.

To say otherwise is just ignoring the facts.

Steve

If you think that's bad, try my TRS-80, Model 1, Level 2 with a
homebuilt
300 baud modem. Actually, I don't use it anymore. Just hate to throw
something out that gave so many hours of fascination so long ago. Or
should
I have said "frustration ?".

Re: What ham radio is today. It is exactly just what YOU make it.
I have been an active ham since 1964. Still active and enjoying it.

I wonder if anyone would venture an opinion on the following
situation:

The antenna mast is 12' -2" steel mast (supposedly masting but I
suspect it is actually schedule 40/80 pipe).

At the top of mast: Diamond x50 VHF/UHF GP
Down 2' from the top: Cushcraft 147-22 VHF beam (2x11el bayed)
1' above tower: Cushcraft A4S w/40m add on

Total wind load for the antennas is approximately 10 sq ft plus the
masting.

I recently put up a new tower. The rotor mounting in this one is much
closer to the top than it was in the previous one. The old tower had a
little over 3 feet between the rotor and the bearing. This one has
about 2 feet.

My question is whether the mast is likely to bend under heavy wind
conditions. It didn't before with a similar spacing of 2m and hf
beams, but then again it had a wider seperation of support points
between rotor and bearing.

I'd appreciate any opinions/experiences/comments anyone would care to
contribute.

That is what is wrong with the attitude of some people on 2 meters. You should be able to call CQ or some other 'acceptable' general call just to get folks to come back to you. As long as I've been a ham I've felt 2 meters to be very clickish when only friends and aquaintances would talk and other people would be ignored. KI7M 'monitoring' sometimes would get a response but not very often, and usually the response was from people you knew. What is wrong with saying CQ de KI7M (substitute your own call of course)? Nothing! Or just saying 'anyone around, this is ....' I don't see anything wrong with that and any control operator who turns off the repeater because someone made a general call is WRONG!

You weren't listening, Steve, so I'll say it again:

Just a reminder - in 1959, the FCC published a Notice of Inquiry asking what incentives could be tacked on to the Extra Class license. They received thousands of comments. We periodically read of folks criticizing the ARRL for "...hurting amateur radio with their incentive scheme..." but it was really the FCC itself that planted the idea in the first place.

Peter, I have been using my Gap Titan DX for over a year now. You may recall hearing about the storm we received in Western Michigan this Spring with estimated wind gusts of up to 130 MPH. I awoke to find my Titan DX bent over about 50 degrees and binding on a piece of PVC that holds an element. A slight movement released the pressure and back up it sprang. I haven't done a thing to it since. I've gotten great signal reports and find this to be a very servicable antenna. High marks from me.
Cheers, Dan ab8cd

Hello

Is there anybody, who can tell me, on which station the American Top 40 program - hosted by Casey Kaseum - is broadcasted in Europe (on FM; AM, Satellite, real-audio etc)? Maybe there is existing a world wide station list. If yes pls. mail.

During the 80's I could listen to this show on FM and AM also in Germany.

Incentive licensing is what almost shut the ARRL down. It was one of
the most stupid things ever promoted by the ARRL. I am not a memeber
nor will ever be..

Steve W4LW yes, I am extra class WITHOUT any ARRL help!!!

I missed the original posts about this so thats why my reply might not make sense. A lot of old timers can't accept No Code licensees and do everything they can to make them give up in disgust. Then they cry that the hobby is dying. I'm glad I started 35+ years ago when people were happy to see newbies.

I don't know who or what you are, but a historian you are NOT. The FCC--you know, that entity that regulates the electromagnetic spectrum in the USA- first proposed Incentive Licensing in 1959-about the time you were eleven years old. The ARRL entered the scene as it always has--as the advocate for hams, and most of the details of the plan that was adopted came from the FCC, *NOT* the ARRL. In fact, ARRL persuaded FCC to drop succeding phases which would have caused even more pain to some hams. But it gives you a good excuse to inaccurately bash the League, and complain, to say nothing about braying your license class about. If you held a pre-Incentive extra, and that seems unlikely, you had one of some 4,000 then issued. Most were held by commercial CW operators, and there was no real reason for mainstream hams to concern themselves, after all there was NOTHING to be gained except the "prestige". And for most people "bragging rights" are worth what they apppear to be worth--not much.

So stay away from the ARRL-- they'll continue to work for the best interests of all hams anyway, you included--if they can figure out what those interests are, given all the garbage being spread these days.

Why would I want my XYL and kids to get licenses so we can talk over family matters on 2 meters? When I'm 100 miles away, 20 miles from cell phone coverage and any other sign of civilization, it's nice to be able to keep in touch briefly. More than once it's helped with car trouble or SAR work as well.

I'm an Extra who usually hangout out on CW. My kid's a No-code who only gets on to talk to me or handle emergency traffic. To each their own; they're both legal.

hey, Bill...sounds logical to me. But have you heard those hams who do NOTHING but talk to their spouses about subjects which (for security reasons, if nothing else) don't belong on the air. Sometimes 2 meter repeaters around here sound like FRS. To each his own, but not very stimulating conversations over repeaters which should be used by all, not a husband and wife going over the checking account! I've heard it. From a security standpoint, tell all who have scanners when you will be home, out-of-town, or how many kids you have and when they are home alone. People don't use the brains the Good Lord gave them. This extreme is what I am referring to.

>I'm an Extra who usually hangout out on CW. My kid's a No-code who only
>gets on to talk to me or handle emergency traffic. To each their own;
>they're both legal.

Could not agree more, but your kid is likely to upgrade and get into his own interests in ham radio, not merely use 2 meters to talk to his old man. I hope you will mentor him and encourage him to find his niche in the hobby. I am not against anything in moderation, but merely discussing a trend I see here.

73 de Mike K3FH (I also prefer CW!)

Rather than bashing the ARRL, why not join it and try to change it
through proactive participation? As for the FCC, we're talking
government bureacracy-- maybe we should work to get hams elected to
congress. Any takers?

Bonjour cher om
Le probleme de votre 940 est bien connu !!
Lorsque vous avez ce genre de probleme cela veut dire que votre PLL n'est
pas verouille donc il est incapable de se caler en reception et en emission.
Ne vous inquiete pas votre 940 n'est pas mort hi!!!
il suffit simplement de refaire toutes les soudures sur la platine PLL unit
qui se trouve de memoire presque au dessus du hp.Mais vous auriez tant qu'a
faire refaire egalement les autres soudures des platines car malheureusement
cela est son seul defaut

CHECK OUT THE NEW REVOLUTION IN INTERACTIVE WEBCASTING, ONLY AT WWW.TALKSPOT.COM

Tonight, on the Laura Lee Show (8 PM PST / 11 PM EST), at http://www.talkspot.com/meta.htm, Michael Theroux, Director of Borderlands Research Foundation, says the EQ Pegasi SETI signal is a HOAX. Theroux makes the case that ET is not phoning home, and that this is not a misread of the data, but an intentional hoax.

Also, extraterrestrial researcher Vaughn Greene analyzes 6,000 year-old Dogu statuettes found in Japan, and finds over 30 points of similarity with modern space suits worn by NASA's astronauts. We'll also look at the Japanese legends, Shinto mythology, and ancient folklore, all of which infer visits by extraterrestrials.

FJ is another prefix for FS, St. Martin, in the West Indies and counts for FS on the DXCC list.

I vote in the primary. I vote to get rid of the weasels.

I never vote in a general election. After the primary, I don't
really care who wins. If your candidate loses the primary,
it really doesn't matter who wins. Jack-Ass or GOP, they both
are part of the 5 Trillion dollar problem.

In Oregon, you don't have to vote anyway, as the candidates
are already elected before the polls open.

Not to mention the part about their Bird Termaline antenna. Last time
I looked, a Termaline was designed as a dummy load, and really wouldn't
be expected to radiate well at all. (But the SWR should be excellent!).

I expect the original author intended it as a satire on the "more worthy"
hams who have passed a high-speed code test but are a little short on
technical knowledge.

Dave

I wouldn't assume you have any priorities at all, and apparently you don't. If you want an education, go to college. Carping about a system that puts reasonable limits on the number of users without resorting to the numerical quotas and cash auctions that the FCC uses for other services, is a waste of time.

And for the record, demonstrating the operating skills to get 5BDXCC IS a meaningful accomplishment. More meaningful than demonstrating "keyboard diarrhea" on an NG!

3475. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <71or9d$lkh@news.Hawaii.Edu>
Source record: 27411
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.dx

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

The problem is that it rewards effort and achievement, and that concept is elitist, divisive and discriminatory and it has destroyed amateur radio. The plain fact that the HF bands in general, and the higher class allocations in particular, are now deserted and in imminent danger of being lost because of disuse, is all the proof anyone could need of how badly this system has worked. No matter which way I beam my Bird Termaline antenna I just never hear anyone on any more. I thought that maybe I had used too much DX grease on it because, although the SWR is brilliant, there is now a large stain on my desk. But that's dumb, you can never use too much DX grease.

By joining the ARRL, you can't change anything. You will get a magazine
subscription.

ARRL membership are sheep. Just look at those in Director positions.
They are all in-bred.

You won't change anything, and all the sheep vote for the incumbent 99%
of the time (or don't vote at all). 1 vote means squat in the big picture.

Wrong.

>You will get a magazine subscription.

Yes, that's one element of membership.

>ARRL membership are sheep. Just look at those in Director positions.
>They are all in-bred.

MOST volunteer organizations are the same when
it comes to getting VOLUNTEERS willing to put in
the time and effort needed for the position. I was national
president of a sports car club. I NEVER was opposed for
office AND my successor wasn't either.

>You won't change anything, and all the sheep vote for the incumbent 99%
>of the time (or don't vote at all). 1 vote means squat in the big picture.

That's the same bull that many people spout as to
why they don't vote in any election. The reality is that
every vote adds to the TOTAL and I've seen votes
as close as a handful that made the difference.

So I'll reiterate Marv, KC0EGB's post...

I believe that Casey left the AT40 production some 10 years ago after differences in operation. Casey is doing "Casey's Top 40" which is enjoying a fairly large syndication.

Shadoe Stevens, who filled in for Casey at AT40 from time to time, supplies the voice for AT40 full time now.

That's all I know about AT40. I used to listen to Casey on AFRTS (affectionally called AFARTS) when I was stationed in Japan back in 1979.

Now, who remembers Casey's tag line that he used at the end of every show?

Preface: To all the old timers this story might be trite, but I'm a relatively new ham - only been on HF for about 3 months.

Its Monday night, the YL wants to watch a poignant movie, but graciously says "you may not like it so you don't have to watch if you really don't want to"

YES!!! I think I will scan the 20 meter band.... solar flux is way down this week, so the band is pretty dead as expected..... wait, what's that weak signal... getting stronger now... tune it in a bit.... Wow! a 5R8 station.... that's from... Madagascar in the Indian ocean... slim chance he'll hear me since I'm only putting out 70 watts to a wimpy ground mounted vertical... I call him anyway.... he comes right back to me with a 55 signal report... quick chat and he moves on to someone else.... I check my computer logging program.... he was 9,100 miles away... can't get much further and still be on the surface of the earth. I hear another caller commenting about the amazing propagation to the Indian ocean tonight... chalk it up to a very rare occurrance.

30 minutes later.... movie still going on... 20 meter band still pretty dead... big pileup of guys from the east coast fighting to contact one booming station in Puerto Rico.... I can't get through over the kilowatt stations from New England driving monoband beams perched upon 200 foot towers..... I move on... Hmmmmm, another weak but easily readible signal... its a 3B8 station.... wow, that's Mauritius Island - in the Indian ocean east of Madagascar... even further away! Again, he comes right back to me, and we exchange pleasantries, marvel at the nice propagation...

20 minutes later.... another station from Mauritius Island is heard (man, I can't believe there is more than one guy operating on that island... unfortunately, the band is deteriorationg rapidly and I can't raise him.

I tune back down the band and still hear the big pileup trying to get the guy in Puerto Rico.... <ho-hum>... I just yawn and pass them by, thinking "if they only knew, or if they only listened for the weaker signals." The movie is in its final emotionally gushing moments and I'm tired. Think I'll call it a night. It doesn't get much better than this.

On the way upstairs I hear "who were you talking to dear?..."
"You wouldn't believe it" I respond.

Gud DX to all,
Mike, AA3RL

>Nobody has answered my question yet. What is wrong with incentive >licensing?

IMHO the big problem with incentive licensing isn't incentive licensing itself, but a mistake in how it was implemented back in the 1960s. Those who were already licensed were not grandfathered into an Extra license - which meant they lost privileges unless they could pass the Extra exam. I think we all know how possessive some hams are of their favorite frequency - a lot got VERY unhappy when they had to move elsewhere. And really, I would think we could have predicted there would be massive unhappiness about rescinding existing privileges.

I do fully support incentive licensing. I also think that it has to be implemented in a way that doesn't remove privileges from existing licensees. (and I also think it's counter-productive to quit the ARRL just because you don't like their position. It's really a lot like refusing to vote because you don't like the incumbent!)

i agree 100%!! the mag sucks, arrl's response for the lousy mag is not a realistic one. i confronted evelyn gauzens with this same argument and the excuse was that that mag is part of the membership but not the basis. i asked arrl to give me qrx (aprox 8 pages) and keep their qst, they declined. they state that the mag must represent all hams (all hams must be into HF only). when questioned about the arrl's constant ramming of cw down everybodies throats she said it was what the membership choose. nobody wants our hf bands, everybody and their brother wants our vhf and up. it doesnt make sense..... maybe they're getting a kick back from large industry to look away...i dont know...

anybody want to start a new radio league that listens to the people it represents? i'm game! we need to get with the times. some of us just plain dont care to learn cw or work hf. what is so wrong with that? we should stop dwelling on trying to make everybody learn cw and follow the lead the europeans have established. their mentallity is we are all radio hobbyist, we all have diverse interest, we all can get along without putting each other down. even the cb'rs hang with the hams over there. whats the problem folk? all we're doing is hurting ourselves by putting each other down.

Because the incentive is only in the testing phase. A.T or after test, all hams pretty much are the same. IE: I feel exactly the same as an extra as I did as a general. I don't know any more as an extra than I did as a general except for the data I've consumed since upgrading. And I would have still consumed the same data as a general. I've been able to see no indication that incentive licensing has helped make more competant op's. All incentive licensing does is cut up the ham bands into silly little pieces. The general class bands stay packed, and the higher class bands generally stay pretty unused. So you have a lopsided and fairly stupid way of using spectrum space. I'm an extra here, but almost NEVER use my allocated extra band space. I hang out in the general bands with the people I've talked to for years. I bet plenty of other extras do the same. So what you end up with is 85% of the people crammed into the general bands and the advanced bands get a slimmer use, and the extra bands a dead zone nearly except for the cw bands. Overall a silly way to use the spectrum. They should just open the bands up wide open and let people go where they want. Would be a more even use of the bands and ease the incentive bottlenecking. MK

It certainly does reward effort and achievement! And because our society is plagued with creeping socialism, we see more and more criticism of individual efforts. Honest effort usually leads to success. Success provides a sharp contrast and visibility between effort and the lack thereof.

The divisiveness of achievement is generated by the envy of the under achievers!

Discriminatory? Only in the minds of the under achievers.
Claiming discrimination is a self serving way of excusing and
covering an absence of effort. This is particularly so when the
same requirement set is applied equally to all.

Mike,

You've broken the code for low-power DXing--call where and when the others don't! Too many folks these days live and die by the DX Clusters instead of slowing trolling the bands or calling CQ on the bands.

I worked DXCC and WAS on an indoor (attic) antenna in about 14 months during a sunspot low by not joining into too many pile-ups where my puny signal would not be heard. When I did, I quickly learned (something my elmer taught me) to listen, listen, listen. I remember working ZL8RI. They were working split on 205, 210, 215. There was an operator swap who listed all those plus 220. I went split to 220 and got him on the first call. The same applies to any pileup--listen to how the operator is working them. Is he getting the last one heard or the first one heard? Is he listening up a couple of hundred hertz (most are)?

What low-power operating taught me were skills that I would not have learned if my first station was a KW and monobanders. Of course, not that I have a beam and a KW, I work almost anything I want. The power and beam helps, but it's the skill that tell you when to transmit.

How about those guys who talk all day on 2M repeaters then when you ask them how they are progressing toward an upgrade they said, incredulously "I don't have time to learn the code!"

"I don't have time....." translates into "It is not a priority for me..."

Anyone have any information on the methods used to do propagation analysis?
Like what is the methodology for making the prediction? Surely we don't
just punch numbers into a program and blindly take what is pumped out as
gospel (although even if we did, who cares?....it's not exactly
"mission-critical").

I am just curious as to how it's done and if there are varying methods for
doing it>

Both of you should go back and read again the response that I made to the original post. A philosophical assertion was made in the first sentence of the original post and I responded only to it. The balance of his post failed under its own weight and technical merit and needed no response.

Great story! This is the nice thing about omnidirectional antennas:
you can sometimes find lonely exotic DX off in directions other
than the one to which all the beams are looking.

'Course, nowadays, you have a much smaller window of opportunity
due to packet spotting, but it can be done.

Over 30 years as a young kid I spent the evening at a "BIG GUN" s qth playing with the big beam and the KWM-2 - 75S3 combo. We alternated shooting pool and shooting dx until the band played out and the last scraps of the hamburgers were gone. It was time to go home, so I got in my little Plymouth Valiant and drove the 20 miles home. Like a "true Dx'er" I had to check the band before I went bed so I tuned across 20. Not a peep, just a little hiss. Tried a cq, nothing. Tried again and thought I heard something. Rotated the antenna around toward Europe and could not seem to get a peak. As I turned it more North the signal picked up. Was it South America off the back ? All this time the guy was still trying to give me his call. Due North over the poll the signal came up to an s-3 and I heard YA1DAN. Ed and I visited for about 20 minutes as his signal peaked to a very readable q-5 and then began to fade back down. When our signals got weaker we signed and he promised me a qsl which I later received. I was the only signal he was hearing and we did not have a single breaker during the entire qso. I tuned across the band again and not a peep. Yes, I tried another cq but it was over.
300+ countries in the log now but I still remember the pleasant conversation with Ed Daniel ,YA1DAN, from the US Embassy in Kabul. Ed's qsl is filed alphabetically along with a lot of others in the qsl file but in my mind it has it's special place.

Thanks for reminding me of my "night to remember".

I made no statement about whether I liked it or not. As a matter

of fact, I was a General when the change occurred and I did not like it. Took me six months and two attempts to do, but I went right back to where I was operating before the change.

There is nothing "fair" about life. Play by the rules in place. If you don't like the rules, then work within the system to change them. Start an effort to implement the plan you propose. It will give me all kinds trouble and headaches. But you can be sure of one thing...I will face squarely ever challenge you put up;
and I will meet it! Thats how much I care about operating on ham radio.

Our opinion differences can be summed up nicely. Something happened to me that I did not like; but I got over it!

On a follow up note:

All three stations were coming through again (even bstter) last night around
9-10 PM eastern time. One from Madagascar and 2 from Mauritius. Same freqs as night before: 14.530, 14.157, ??? if I remember correctly. No pileups - sometimes nobody from US answering. So I worked both of 'em again plus the new one I missed the night before. I expect they will try again tonight since they were getting through so well.

Go figure!

Personally, I don't see anything wrong with it. I got my Novice license in 1967 back when it was a 1-year non-renewable ticket. From there, you HAD to upgrade to something. I got the General in 1968 and after poking around in the CW bands for a couple years got the Extra in 1971 because I was missing out on all the CW DX.

Perhaps how someone responds to the "incentive licensing" issue is revelatory of that person's character. Many people DID see it as an incentive and got the higher class ticket as a result. I didn't think the test was that difficult, even when the tougher tests were given in an FCC office. (Darn it, I didn't have to draw any schematics on my test!)

Yes, that's the excitement of it. I became a serious DXer in late 1992. I still remember the late-night (my time) chats with XT2BW who wanted to know U.S. football scores; working an S2 and not even knowing what country it was; the first big pileup I busted (VR6BB) and many many other experiences.

Now 10 meters is coming alive again and it's the same thing all over again. Excitement over working a 5B4 or an A45 on a band I only have about 40 countries worked on.

After 30+ years I still find this an exciting hobby.

ZCZC AE44
QST de W1AW
DX Bulletin 44 ARLD044
From ARRL Headquarters
Newington CT November 5, 1998
To all radio amateurs

SB DX ARL ARLD044
ARLD044 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, DXNL, The 599Rpt, The Daily DX and Contest Corral from QST. Thanks to all.

NIGERIA, 5N. Bogdan, SP5CPR, is active as 5N3CPR on all bands until the middle of December. QSL to home call. Incidently, resident Nigerian amateurs may use the 5N38 prefix in celebration of the 38th independence anniversary.

PRATAS ISLAND, BV9. BQ9P will be QRV on 160 to 10 meters, using CW, SSB and RTTY from November 10 to 19. QSL via KU9C.

KYRGYZSTAN, EX. Victor, EX8QB, has been showing up on 20 meters CW from 0130 to 0230z. QSL via IK2QPR.

FRENCH POLYNESIA, FO. Bob, FO5BI, is QRV on 160 meters, and has been making a number of QSOs with Pacific stations. QSL via F6HSI.

JERSEY, GJ. Chris, G0WFH, is QRV as GJ0WFH from IOTA EU-013 until November 11. QSL to home call.

JORDAN, JY. Ken, K4ZW, is active as JY8ZW especially on 160, 80 and 10 meters until November 16. QSL to home call.

NORWAY, LA. Ben, OZ5AAH, will be active as LA/OZ5IPA until November 9. This includes participation in the IPA contest. QSL to home call.

NETHERLANDS ANTILLIES, PJ. Jose, PJ2MI, is QRV using SSTV on 15 and 10 meters. QSL via W2CQ.

SEYCHELLES, S7. Roger, KF8OY, is active as S79OY using CW and SSB, especially on the low bands, until November 9. QSL to home call.

CONGO, TN. Missionary Hazel, AL7OT, continues to operate as TN7OT during her twilight hours. QSL to home call.

ASIATIC RUSSIA, UA0. Yuri, UA0SJ, is QRV using RTTY, SSTV and Pactor.

SOUTH SHETLAND ISLANDS. Stan, SP3BGD, is QRV until 10 December from the Polish Antarctic station HF0POL. QSL via SP3SUN.

KERMADEC ISLANDS, ZL8. Bob, ZL1RS, will be active from IOTA OC-039 signing ZL8RS from November 9 to 17. During his spare time he will concentrate on 17, 15, 12 and 10 meters SSB with some 30 meter CW. QSL to home call.

THIS WEEKEND ON THE RADIO. The ARRL November Sweepstakes, CW, North American Collegiate ARC CW Championship, IPA Contest and the Japan International DX Phone Contest will certainly keep contesters busy this weekend. Please see November QST, page 97 for details.

Hello Dean OM,

I concur completely (what prudent person would not?).

When someone signs a letter "Me", that tells it all.

Effort and achievement lead to obvious differences, made very visible
to those who are unwilling to exert effort themselves. There is nothing
wrong with the word 'elite'. It is something to shoot for yourself!
This is the way it should always be, of course. Rewards always
rightfully belong to those who achieve, not those who don't. This
is stuff one learns when a small child, and is idiotic to question
as an adult, egad! Someone needs to Grow Up, it seems.

I've been a ham since 1952. I got interested in radios looking in the back
of my "grannys"
big stand-up AM radio during the war (the big one).
But nothing beats ham radio for occasional thrills. It's something like
fishing.
I work a russian in an igloo doing science experiment above the artic
circle. His antenna was
a wire lying outside the igloo on the ice.
I worked an Egyptian riding a camel. His battery qrp rig was in the saddle
bag.. His antenna
was a vertical with a wire counterpose dragging in the sand..

I love it!

Why is this being posted to so many news groups? I've seen nothing in this thread dealing with antennas, boatanchors, digital communications, equipment, homebrewing, or space communications. The only thing related to DX are slams against those who call CQ DX or chase paper. Are you seriously interested in exchanging ideas or just trolling?

There's nothing wrong with an incentive licensing scheme that rewards technical merit. There is much wrong with an incentive licensing scheme that rewards the ability to chirp like an insect at the expense of technical merit. The sooner the ARS starts rewarding technical merit, the sooner ham radio will recover from the present unfortunate anti-technology attitudes.

My best story: one night (about 10 years ago I guess) I was tuning around
40 CW one evening, looking for CQs from Europe. Found one that sounded
like DX and started copying:

... CQ CQ DE HA1A

cool, I'll answer this one...

5A1A

huh? one too many dits there...

5A1A 5A1A K

no! I miscopied! 5A!!! Worked him on the first call, got the QSL.
No beams or amps required, just dumb luck. The joy of DX...

Fantastic!

Mine was my 6th QSO as a Novice in 1973. (I'm celebrating my 25th year of ham radio this month!) Rockbound on 21.126, I'd call anyone who CQd within 5KHz of my transmit frequency and actually made two QSOs...(plus four on 40 meters) If the band was open but nobody was CQing anywhere near .126, I'd call CQ myself, but never got any answers.

Until one day. "WN9NME WN9NME WN9NME DE KJ6DI KJ6DI KJ6DI KN" Wow, California! "UR 559 559 HR QTH JOHNSTON ISLAND JOHNSTON ISLAND..." Huh? I'm pretty good at geography, but never heard of Johnston Island, California. Doesn't show up in the atlas either. I don't think I figured out where he really was until his QSL showed up about 2 weeks later, and I had my Extra before I realized just how rare Johnston Island is...

Too late. The majority of hams now are non-technical types. Aside from small weekend projects most don't build equipment. Most can't work on the microscopic computer boards in modern radios, and have to send them in to be fixed like a broken TV. The tide has been turning for years and there is little hope of reversing it. Ham radio is fast becoming a communicators hobby.

Does anyone know of a freeware Digital Voice keyer that can be used to record and playback CQ calls, and reports during a contest. Want to use the sound card instead of
buying the Contest Card. Would love to have it, just cant afford it. Need to buy a reasonable priced amp (300.00 - 400.00) that uses 3-500 tubes instead.

There's been "chirping like insects" for as long as there has been the ARS... suddenly now it is responsible for all of the service's problems?

Personally, I think part of the problem is that homebrewing is dead. It's hard to build a serious rig when every component in it is micron sized and microprocessor based. Part of the allure for me as a ham in the 60s was building my own gear. That was an incentive for figuring out how things worked.

It's also hard to work on modern rigs, and generally the fix is to find out which black box in the set needs replacing and replace it. Big fun.

Actually millions of years longer than that. :-)

> Personally, I think part of the problem is that homebrewing is dead.

> sized and microprocessor based.

Actually homebrewing is easier now than then. Integrated circuits
have taken much of the toil out of homebrewing and microprocessors
are easier to program than electronic circuits were to design and
build. Digital radios are just down the road. Digital is easy.
If it's not a 'one' or 'zero', it's broke.

> Part of the allure for me as a ham in
> the 60s was building my own gear. That was an incentive for figuring

Get after it. Change with the times. It's easy. I do it all the time.
I just bought a DSP evaluation board.

> It's also hard to work on modern rigs, and generally the fix is to find
> out which black box in the set needs replacing and replace it. Big fun.

So it's a challenge. Get after it. If it's worth repairing, I fix all
my own electronics stuff. The only time I ever sent anything back for
repair was when my IC-745 lost its program memory which was in RAM.

>Just remember that eventually the tide turns the other way.

Real tides are periodic, and always turn the other way.

"The tide turns" as a metaphor for changes over time often does
not change direction. When the tide turns in a military battle,
the side that just went from winning to losing often goes to
eventual defeat.

It seems to me that there are two problems with retaining the
experimental side of the hobby: One is that commercial gear is
so much more sophisticated than it used to be that it's essentially
impossible to built competitive equipment at home. Thus, experimentation
is now something people do because they like experimenting, or because
they want to explore a mode or a technique not available in commercial
radios. People no longer build radios just to use them to communicate -
they buy a radio instead. So the set of experimenters is much smaller.

The other problem is that the rules seem to be set up to discourage
experimentation. Imagine if 1/3 of the bandwidth of every ham bad
was set aside for "non-traditional" modulation schemes. CW, AM and
SSB voice, and FM voice could be forbidden, along with any data
transmission using standard 1200 and 9600 bps modulation. There
would be an additional incentive to try something new - that's the
sort of incentive that would make a useful contribution to the hobby.

Dave

We can't build 'cuz it's too hard. Whine, Whine, Whine. Woe is
us. Actually, building and experimenting is easier than it
ever has been because the tools are so much better than they were
in the past. A PC can do for us in seconds what took many hours of
manual/mental/trial&error effort in the past.

What keeps people from simply duplicating designs from 40 years ago?
All the parts are still available.

> The other problem is that the rules seem to be set up to discourage
> experimentation.

Yes they are. The Morse code requirement is a good example. The time
spent learning Morse code would be much better spent learning
electronic theory and how to experiment. As a Return On Investment,
for the average ham, the Morse code requirement has proven to be next
to worthless for the past 30 years. If I had a stock which promised
salvation during emergencies and didn't deliver, I'd sell it, give
it away, or burn it.

Marv OM,

We are living, now, in a Golden Age for ham radio homebrewing. Yes, that's right. I for have been building CW and FSK transmitters, receivers, and most recently a phasing type DC receiver, which works beautifully. Much easier than the Old Days, which I remember well (at least back to the early 50's). No chassis work, no high voltage, no metal work, etc. Integrated circuits take much of the drudgery and detail out of building rigs. The reason there is less homebrewing now is LACK OF INTEREST AND MOTIVATION, that's all. Most of the folks who claim you cannot build anything today are the ones who do not do it, so they know not whereof they speak at all. I have found parts to be plentiful and cheap. I am well into the bifocal age myself and find that I can handle SMT components fairly well. Just use good light and a magnifier if needed; it is done every day by those that you seldom hear from. We are currently in a resurgence of homebrewing activity.
Like every other activity in life, when it comes to ham radio, one is either technically interested, or not. One's daily activity reveals what their interests really are.

73,

Don, W6JL

Source record: 27210

Many of you may remember that as a part of post world war two history the German prefixes of DF, DJ DK DL and DM were assigned to the various occupation zones. Then around 1960 with the building of the Berlin wall the sealed off Russian occupation zone became the GDR (English) or DDR (German) retaining the DM prefix. Then, judging from my QSL card file, sometime around 1980 they dropped the DM prefix and went to Y## where ## were two digits. These appear to have lasted up through the early nineties. The last Y## QSL in my file is dated 1992.

This past week I heard DM3FZN on 12 meter CW calling CQ. I asked Ulli if there was something special about his DM prefix and he explained that the German authority has opened up something roughly equivalent to our vanity call sign system allowing those who held old DM prefix call signs originally to reclaim them.

In my QSL file is a card from Ulli under his original DM3FZN call sign dated July 1979, and another under his Y47LN call sign dated September 1980. I expect to shortly have another card from him under is new/old DM3FZN call.

3564. Re: A DX night to remember - the sequel

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-06 00:00:00 UTC
From: Terry Brown <brownt@frl.orst.edu>
Message-ID: <36439210.2FFF7359@frl.orst.edu>
Source record: 27214

It has been a pleasure reading everyone's DX accounts and it brought back many pleasant memories of running 100 watts and beating the big KW stations with the contacts. I am amazed at how a little finesse goes a long way in being successful working DX.

The joy of working rare DX whether a short contact or a more lengthy one is not available to so many of our fellow hams who never make the effort to upgrade past technician. I suppose it is a matter of priorities, but I often think that if a person with a technician class licence would just take 10 percent of the time they spend "surfing the net" and direct it toward learning the code, it wouldn't take all that long to get to 13 WPM.

Until recently I was the Faculty Advisor to the Oregon State University Amateur Radio Club and one of the biggest challenges was to try to convice a young man or woman who is a technician that the rewards of getting the General class or higher class licence is so great. I hate to think how limited my Amateur Radio experiences would have been if I had stopped at Novice or Tech.

Great DX stories...keep them coming!

Very 73's to the group,

Terry Brown, N7TB

Hey, I'm one of the people who would rather build something than talk
to other people on the radio. But just how many hams have you met that
have the technical resources to build something on par with a current-
day commercial transceiver? Particularly on their own? Very few.
Could they do it for the same cost (assuming that their labour was free)?
Probably not.

>What keeps people from simply duplicating designs from 40 years ago?
>All the parts are still available.

But the designs from years ago are not competitive with current
designs, at least in operating and display features. So people who
just want to talk to other people, and are fundamentally uninterested
in building things, just buy something. 40 years ago, they might have
built instead, because building was cheaper or better.

>> The other problem is that the rules seem to be set up to discourage
>> experimentation.

>Yes they are. The Morse code requirement is a good example. The time
>spent learning Morse code would be much better spent learning
>electronic theory and how to experiment.

Agreed. The other thing I had in mind when I wrote this was
how the old guard seemed intent on preventing the use of spread
spectrum if it might, just possibly, maybe, increase the noise floor
a little for their DX paper chasing. That's why I suggested setting
aside some bandwidth where traditional modes are banned and experimentation
is welcome. I can imagine the howl if it was ever formally proposed,
though.

Dave

It doesn't have to be on a par with an IC-775.

> But the designs from years ago are not competitive with current
> designs, at least in operating and display features.

The easiest part of the radio is the operating and display features.
It is is a digital microcontroller. It can be done from a PC
using the parallel port. A good starting exercise would be to put
a standard transceiver under PC control. My ICOMs have a serial
protocol built in for that purpose. A DSP eval board will do serious
filtering and the PC development software comes with the board. That's
an excellent way to get started experimenting. TAPR has SIGs dedicated
to such.

There's absolutely nothing to keep hams from experimenting except
the hams themselves.

The thing is, DSP programming and math *is* interesting to some
people. Much much more interesting than learning Morse code. These
are the people we should be encouraging to become new hams.

Forget about educating people who don't want to learn new stuff - it's
a lost cause. Let them have their current licence priviledges until
they die.

But for the future, we should be trying to attract people who like to
experiment, not chase them away. If it's necessary to us an "incentive"
of extra subbands to encourage something, use it to encourage technical
proficiency and experimentation, not near-dead communication modes.

Dave

Dear Terry and other Hams,

I was once one of those Techs who lacked the chance to work the HF Bands. However, last year, my friend Wally (KF6APH) just had to get on the local repeater and tell everyone and their brother about all those GREAT 10 meter contacts he was making all over the place!!! Well, I broke down and started to learn the code. After all, how hard could 5 WPM be?

It turned out I was a really SLOW learner. Even with a total of about 60 minutes every day, it tooks months and months for me to get it. I passed the 5 WPM back in December of last year. At that point, I didn't want to throw CW to the side, because I felt so close to reaching 13 WPM. Well, it also took several months before I passed my 13 WPM and reached General. At that point, it was just another test to reach Advanced, which I took and passed the test for that 2 months later.

As a new comer to HF, I find the whole thing to be exciting. I NEVER know what I'm going to encounter. At times the bands are hot and other times, oh well.

I just run 50 watts with my Ten Tec Scout. Not exactly high power, but not QRP either. I have a 3 element yagi for 10 meters, a "V" antenna for 15 & 20 meters, and a home made folded dipole inverted "V" antenna for 40 meters. While It's not a "big gun" system, it sure seems to work great for what I do.

I almost never try to get into a pile-up, there's almost no way I can win against the really big guns. I did beat the big guns by being clever one time:

There was this Ham in South America that was having a really hard time with speaking English. Still, he wanted to make contacts, so he kept at it. Knowing that I didn't have the power OR a super antenna to beat the others, I used the one thing that the others didn't offer . . .

When it came time to call him, I gave my callsign, then started speaking in Spanish, saying that I could speak some Spanish. The Ham in South America came back speaking Spanish asking that the station that speaks Spanish, please come back. We chatted in Spanish a bit, exchanging signal reports, our locations, and a bit about each other. It was great!!! My Spanish isn't the best in the world, but I could understand him and he understood me.

For me, the most fun with HF is to search the bands looking for that "CQ CQ CQ". It doesn't matter if the fellow ham is in the next state or across the world. There's something about searching and searching for that CQ call and making contact. Kind of a joy of the "hunt" and the pleasure of a chat.

73,

Bob
KQ6WQ (I once was KF6JHG)

The problems are the result of the refusal of many to "keep up with
the times" and accept the need to adapt to changing technology.

>Personally, I think part of the problem is that homebrewing is dead.

I agree that there is not nearly enough building going on ...

>It's hard to build a serious rig when every component in it is micron
>sized and microprocessor based.

That's where you're mistaken ... all that's happened is that functions
that used to take entire racks of tubes have been integrated into
ICs ... it's actually MUCH easier to design/build a "serious rig" today
than it's ever been in the past ... IF you understand how the modern
technology works ... there's that "nasty" requirement for having some
technical knowledge/skills and keeping them up-to-date.

Of course you can't design/build a "serious rig" today if all you know
is tubes ... perhaps this does not apply to you, personally, but it
DOES apply to a LOT of old-timers.

> Part of the allure for me as a ham in
>the 60s was building my own gear. That was an incentive for figuring
>out how things worked.

So why did that incentive disappear? It sounds like you just gave up
when confronted with changes in technology from what you were
already familiar with ... if that's not the case, you should/would/could
have adapted ... by learning ...

>It's also hard to work on modern rigs, and generally the fix is to find
>out which black box in the set needs replacing and replace it. Big fun.

It is NOT "hard" to work on modern rigs ... (I'm assuming you're referring
to surface-mount technology and the smaller part sizes and higher levels
of integration ...) it's just DIFFERENT. You need a slightly different set
of knowledge/skills and a few simple tools. As is said in my last post,
I routinely work with rather fine pitch ICs (SSOICs, TQFPs, etc.) and
passives (R, C, L) in 0603 chip form. It's different than using the old
"Black Beauty" or Weller soldering gun to solder wires and leaded

parts to octal tube sockets (I've done that, too), but it's not "harder."

The more I read of your post, the more it appears that the only thing
that stopped you from building was an unwillingness to learn and adapt
to the changes in technology that have happened around (and,
unfortunately, bypassed) ham radio in the past several decades ...
I don't mean to be personally offensive, but I think that that combination
of attitude and (in)action is THE worst cancer eating away at ham radio
and its ability to survive into the future.

However, there IS a significant distinction ... to the many of us are actually
interested in things like DSP, modern communications system design,
and the theory behind them. Those are skills which have actual, practical
value in today's world and into the future ... the ability to manually encode/
decode OOK Morse transmissions has NO such value to us ...

When I was a child, I thought math was "evil," "boring," etc. When I got older
I realized that it's a fundamental tool for understanding how the world and our
technologies work ... it seems to me that those who merely wish to play games
using radio as a playing field tend to dismiss the value of fundamental skills
and knowledge of the underlying technology ... for many of us it's the raison
d'etre for the ARS (and Part 97.1 seems to substantially agree) ... the funny
thing is that I don't see a damned thing in Part 97 (anywhere) about games,
contests, and the like being "part of the purpose" ...

Well, I'll concede some merit to your assertions :-). I didn't give up so much as get sidetracked-- working on a math degree at M.I.T. left me with little time for ham radio, unfortunately-- and before I knew it 5 years had passed and the ticket was gone. Took me quite a few years to get back into it, and like most people I am stubborn and set in my ways :-)

73s,

3576. CW reader softw. for Soundcards

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-07 00:00:00 UTC
From: PEE@ProMail.com
Message-ID: <36448B2A.B2AA2EC1@ProMail.com>
Source record: 27043
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.dx,rec.radio.amateur.digital.misc,rec.radio.cb

Here you can get a CW software that really works !!!

The Morse Decoder MRP37 is a "Just easy to use" Software using your PC +

Sound card. Clear text is decoded and displayed on the screen.
Even under very weak audio conditions MRP37 performs excellent results!
Comfortable Morse sending functions included.

See more information's and get a free demo version at:
http://members.tripod.com/~PEeng/morse

Really good stuff!

Wow, I'm glad you're not the ham God. Just plain ragchewing has always been a big part of the hobby. Nobody should be forced to become technical just to enjoy this part of the hobby. Perhaps it would be realistic to also eliminate the engineering part of the test for those that only wish to use plug and play radios. Making people memorize technical material that they don't understand to get HF privileges is just as much a weeder as the CW test.

If we needed to justify our bands by *service* we would have lost them long before now. All any detractor would need is to have the legislators actually listen to our bands. We're lucky we have what we still have.

Marv ... I'm glad you didn't take offense ... none was intended, despite
the fact that I may have been a bit harsh with you considering it was,
I believe, our first exchange.

You sort of hit one of my "hot buttons" though ... the misconception
that modern technology makes it "harder than it used to be to build
ham gear" ... as I hope I stated clearly, nothing could be further from
the truth. And it doesn't have to be an OOK Morse rig, either ...
excellent results can be had in FM, SSB, and digital modes with rigs
built from ICs which actually shield you from much of the complexity
by integrating it onto the chip. Add a few bypass caps, some resistors,
an inductor here and there, a crystal, etc. and you've got a complete,
functioning system.

Why not take a crack at it, if you're still intrigued with building?

I agree that we're luck to still have what we have ... we need to keep
up public service (and keep our capabilities up to what the emergency
services folks want) as well as start showing some technical progress
or I'm afraid we're going to get hosed in a big way in the early part of
the coming century.

The EMS folks don't need/want CW ops any more ... they haven't
in many years ... they want VHF/UHF tactical voice and data and HF
voice and data ... not Morse code.

We need to do a LOT of modernizing if we have aspirations of
survival ... problem is, many of the folks who want to keep things
"like it was in 'the good old days'" will be dead in a few years and
really don't give a rat's ass what happens after that.

Truth is, anyone who wants to homebrew the old way can still do it.
Anyone who wants to homebrew the new way can do it. More opportunities
for homebrewing exist now than have ever existed. It's hams who have
changed, not the homebrewing opportunities. I personally would like
to see a ban on commercial amateur transmitters, akin to the ban
on 11m linear amps. 'Course the ARRL would never go for such.

Note that the very hams who want to force "outdated and irrelevant skills"
on all HF amateurs are the very ones who object to the learning of up-to-date
and relevant skills. Why am I not surprised?

Wow. What ever happened to different strokes....live and let live..ect. This "if you ain't technical you should be banned" attitude is very similiar to "if you don't know the code you should be banned". One of the interesting parts of this hobby is chatting with people in other professions: teachers, cops, truck drivers ect. Most of them will learn how to make antennas, install radios, and even build kits, but probably unlikely to become an engineer that is up to your "technical ham" standards. If they *really had to know* what is on the engineering part of the ham test of course they wouldn't have passed anyway. But of course the test is a laugh as far as determining a persons technical ability. To reach your goal maybe you should get the ARRL to support a *real* engineering ham test.

I thnk that there are other very good reasons for avoiding the circuits
and components of the past:

Those 40-year-old designs for transmitters were built largely around the
use of Class C frequency multipliers, drivers and finals. Without
extensive filtering and shielding, such architecture can result in
overwhelming RFI, as witness the 50's when TV first came on the scene
and most of us were still using the "old" circuits and equipment. True,
the TV sets then were grossly inferior to present-day designs re RFI
rejection, but the fact remains that our transmitters today are marked
by an almost total absence of Class C stages and other circuitry that
generates high levels of harmonics.

I always cringe a little, having lived through those early days, when
folks advise new hams to start off with a "good used DX-100" or
equivalent. We use SSB for phone and multiple IF transmitters these days
for good reason . . .

Thats kinda of a curious stance. You seem to run mostly commercial gear.
IE:Icoms etc.
How often do you run homebrew gear? I'm talking a complete tranceiver,
or homebrew rcvr/xmtr. I built my first xmtr as a novice, but no rigs
since. I do homebrew other stuff though. All commercial gear here
now,but I can fix them if they break. One problem with the new age
homebrewing is info. Alot of the new modules ,componants,chips, etc are
not really advertised unless you subscribe to all the parts co. books.
Or are mentioned in a article. To build a rig I'm sure is not too hard,
to build a rig with all the fancy bells and whistles, I'm not so sure.
Just to dupe my small icom 730 would be quite a homebrew project.And
it's pretty old. I'm all for homebrewing, but everything I see
homebrewed is all qrp stuff. Small size, small features,etc. I don't
hear of too many modern homebrew BIG feature rigs. I don't see any in
the mags that would satisfy me as far as plans go. All I see is mickey
mouse looking qrp rigs. I'll stick with my Icom and kenwood, and drakes
for now I think. MK

Of course, it is a German call ... I don't recall the URL, but go to the website of the amateur radio station of the Technical University of Ilmenau - DK0TUI, and get the info there. Either throw "Ilmenau" or "DK0TUI" at some search engine on the web, and the DK0TUI website usually is the second hit...

> Don, W6JL

Don is exactly right. There has never been a better time for the
homebrewer and experimenter. A large part of that is due to
SMT and VLSI. SMT allows us to fabricate complex circuit
boards without having to resort to drilling and plating through
holes. It is now faster, easier, and cheaper to lay out, etch,

and load a board than it ever was with leaded parts. We don't need special CNC drills or nasty plating baths.

The techniques for working with SMT and VLSI aren't complex, and don't require very expensive and exotic equipment. The equipment required is actually cheaper and simpler than for working with thru-hole parts, but some new skills do have to be learned. 80 year old watchmakers 350 years ago, and jewelers going back to pre-history, mastered these skills, however, so age and lack of exotic tools aren't barriers preventing the amateur from working at this level.

VLSI has encapsulated entire functional subsystems into a single component. That's made complex circuit functions easy to design and build. PALs, GALs, and programmable DSP parts have made realizing virtually any transfer function simple.

More and more our radios use digital signal processing techniques to realize their transfer functions. This trend will continue to accelerate. In broadcast, even that traditional analog stronghold, the PA, has given way to high efficiency digital switch mode design. It is only a matter of time before amateur equipment also exploits the advantages of DSP for virtually the entire radio from end to end.

Many of these functions can be designed and tested on the PC before solder is ever laid to copper. Anyone with a PC and a few design tools is as well equipped as any corporate drone for doing this work. Amateurs willing to acquire the knowledge and skills required are on an equal footing with the professionals. Cost, and the need for specialized equipment to develop new systems, has virtually disappeared as a separator between the amateur and the professional. Most circuits translate directly from screen to copper and work first time. A lot of tinkering and fussing with prototypes isn't required.

This latter seems to put off some amateurs. They've always developed circuits by trial and error, and that isn't as easy to do today as in the past. Some knowledge and skill at design is now required from the start of a project. The builder has to think and plan a bit more than in the past. But on the flip side, his project is more apt to work correctly the first time too.

The knowledge and skill required is not difficult to obtain. Claims that an EE degree is required are false. If you need information force fed to you in a structured setting, then it may indeed be true that you might have to enroll in an EE program. But amateurs shouldn't need to be force fed. Our curiosity should be sufficient spur. The knowledge required is available in books and on the web, all it takes is the interest and initiative to go seek it out. We don't have to be well rounded products of university, we can focus as narrowly on our own objectives as we like.

Since much of the functionality of a radio is now software, and since software is the ultimate cottage industry, amateurs have a greater opportunity than ever to play at the same level as the corporate

giants. And since amateurs have no deadlines or quarterly profits to concern them, they are free to pursue ideas that might seem too exotic or long term for the corporate environment. Amateurs have the greatest freedom of all, the freedom to fail. If our idea doesn't work, no bottom line is impacted. This means that we can poke into any dark corner (which is where all the fundamental breakthroughs hide) without worrying about keeping our jobs. We don't have to stick to only sure things where schedules and deadlines can be maintained. This is a huge advantage.

The days when we looked to the great corporate laboratories for innovation are gone, victims of quarterly bottom line pressure and corporate downsizing. Real innovation today comes from small aggressive groups equipped little differently from the amateur. We don't have to take a backseat to them, unless we lack the interest and enthusiasm to work at their level.

We don't have to be consumers of the products of Japanese industry unless we want to be. We can build equipment which is comparable to, or exceeds, the capabilities of the factory rigs right on our home workbenches. (Our radios might not be as pretty, lacking stamped or injection molded cases, but they can work just as well, or better, than the consumer appliances many of us buy.) It is really up to us, there are no real barriers preventing us from doing it except our own self-imposed limitations.

>Bob
>KQ6WQ (I once was KF6JHG)

Wait until you get a QSO with, say Perth Australia from the mid-USA,
some night with 5-10 watts input. It happens.

Crank the power down until you are at 1 watt out or about and the guy on
the other end notes he loses you in the noise.. :)

Then go get a flashlight and point it up at the stars outside and click
it on..

If you think radio and HF ain't something special, contemplate...

What you just got out of that QSO was in the ball park with what you
spewed up in the heavens with that flashlight for comparative purposes.

Then consider how many OTHER people could have heard that signal from
that same power level and application.... vs. what you projected from
that flashlight....

A few QSO's like that will have a profound effect on one's perspective
about life, this whole thing going on around us, cause and effect. or ..
at least it SHOULD...

Of course VHF has these same kind of super-path tales as well at times..

But on HF, it just is more impressive... it seems... isn't it?

<grin>

>Could they do it for the same cost (assuming that their labour was free)?
>Probably not.

I'd say most hams have the resources, or can easily acquire them,
to build a radio which can exceed the performance of a current day
transceiver. Few have the gumption to try. Cost can be a bit less too,
but again you have to be willing to try. The one area where hams
probably can't duplicate commercial equipment is appearance.
Without access to stamping machines or injection molders, our
efforts look a bit "amateurish".

>>What keeps people from simply duplicating designs from 40 years ago?
>>All the parts are still available.

Parts aren't always available. Lots of the 40 year old designs
used parts that are no longer used in electronic production. You'd
have to do some serious scrounging to locate some of them. Of
course hams have always been scroungers, but building with this
generation's parts makes more sense.

>But the designs from years ago are not competitive with current

To those who have never experienced it, there doesn't seem to be much
point to Dxing. You might as well be trying to explain color to the blind as
to try to convince someone that trying to bust a pileup is fun, or that trying
to exchange only a few words with someone buried in the noise is exciting.

To most Techs, that's a totally alien idea. Their experience with radio is
FM (no static at all) and conversations with local friends carried on in
orderly fashion via repeaters. Since they aren't allowed on HF, they have
no way of relating to the joys you feel when Dxing. If it weren't for that
irrelevant 13 WPM Morse speed test, they might have a different view.

Then too, there are many in amateur radio who could care less about
Dxing. That's not why they are amateurs. They want to really talk to
people, not just exchange signal reports. Or they want to experiment
or build. Or any of a number of other reasons. While I'm sure that Dx
is the pinnacle of amateur radio to you, it may not be so for others.
People are different, and have different interests. One thing about
hobbies, people aren't likely to do things that they don't want to do.
It isn't school, and it isn't a job, it is something that they do for fun.
If it isn't fun, they don't do it.

Yes, it is. Everything from DA to DP are German callsigns.
Among these, DB, DC, DD, and DG are class 2 (VHF up), DO
are "beginner's callsigns" (144-146 and 430-440 MHz only
with restricted power), DN are training stations (class 1
or class2), and the newly re-issued DM calls can also be
either class 1 or class 2. DE "callsigns" are given to
registered SWLs (since DE might lead to confusion in
telegraphy). All other series are now class 1 (all bands).
(Maybe there are still some DA calls who are class 2, too,
this series was mainly issued to foreign visitors).
The DI series has not been issued yet, neither have DQ and DR.

I agree. But sometimes it isn't clear what people are intending.
If I transmit "VK3TYD listening", is that a CQ?
If I transmit "VK3TYD calling and listening", is that a CQ?
I've heard both of these. Usually nobody comes back.

It isn't always as you describe it though. This afternoon I was having
a chat with a friend and mentioned a problem I'm having one of my 2m
rigs, an ex-commercial one very popular in Australia.. Before long
there were five of us talking about them.

>
>Too late. The majority of hams now are non-technical types.

Probably so ... at least as in "They're not technical professionals."
That doesn't mean that they can't/shouldn't learn about the technology
of electronics and radio communications. On the contrary ... one
of the main purposes of the existence of amateur radio is for self-training
and education in the technology.

> Aside from small weekend projects most don't build equipment.

That's sad, but true ... we should encourage more building ... but before
the procoders jump in with "That's why we must maintain Morse testing,
because it's so easy to build a CW rig ..." let me say "HORSEFEATHERS!"

It's no more difficult to build something FAR more effective and efficient
than an OOK Morse rig.

As has been outlined here MANY times, even simple BFSK has an
advantage of (at least) about 9 dB over OOK Morse ... the main gripe
of the procode faction is that it (usually) involves the use of a machine
(microcontroller) to perform the encoding/decoding function ... why they
must insist that manual methods must always be considered "superior"
is beyond many of us ... it flies in the face of the physical and technical
realities of the world we live in, but many insist on adherence to that dogma
with pseudo-religious fervor.

> Most can't work on the microscopic computer boards in modern radios,

Only because they have avoided accumulating the necessary basic
knowledge and simple tools necessary to do so. I routinely work with
moderately fine pitch ICs (SSOICs, TQFPs, etc.) and passives of 0603
size with simple tools and no problems.

>The tide has been turning for years and there is little hope of reversing it.

Why? Because you say so? When we place more value and emphasis on
technical abilities and knowledge than, as Cecil said, "chirping like insects,"

we'll see a turnaround.

> Ham radio is fast becoming a communicators hobby.

That is a course destined to self-imposed extinction ... there is no way
that we will be able to justify our allocations far into the future on the basis
of a communicator's hobby. The current demands for spectrum are too
great and they will only increase in coming years (yes, even into the HF
bands, I predict) ...

Yes, it is a U.S.A. call, and recently issued, NY or NJ. Calls in
this 2X3 series are normally issued to General, Tech Plus, Novice or
Tech operators, but in this case the call holder is an Advanced class
operator,

A good USA call lookup site is http://www.qrz.com where operators can
post QSLs and biographies. Non USA operators can also post their QSL
info on this site.

Indeed, that is the crux of the matter. Many hams love to berate those who balk at learning Morse (a perhaps fun, but largely outdated and irrelevant skill), yet when faced with learning something ACTUALLY useful, say that it is far too much to expect.

I think it is too much to require people to learn outdated and irrelevant skills, no matter how easy.

As for the difficulty of learning DSP, is it really harder to learn how an FFT works than a transistor? I know that I understand FFTs alot better. Are crystal filters easier to design and use than digital filters? Microcontrollers are cheap and available, and while perhaps your homebrew rig might not look as

nice as the commercial rigs, more and more of the "convenience" functions of modern rigs can be easily added by amateurs. Both Microchip and Atmel sell chips that are easily programmed by any amateur. They are low cost and can

add a great deal of functionality to a radio.

A demo that you can only look at, not actually run, doesn't say anything for how the software performs.

3613. QSL Address For DL6FBL

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-08 00:00:00 UTC
From: wb6wqa@juno.com

A Spanish DX website is listing DL6FBL as the QSL manager for CN8WW, worked during the recent CQWW Phone Contest. Can't find an address for the German QSL manager. Can anyone help? Thanx!

Hi Bill,

you are right and I agree with you!
Please let me inform that MRP37 provides much more than usual demos do.

The user can verify the performance of the Morse Decoder (Demo) using
REAL CW AUDIO SIGNAL from your receiver!
Just tune a real CW station make a record using record function of MRP37
Then execute playback function and explore ALL full version features MRP37
provides!
Don't hesitate to test MRP37 with weak cw audio signals, MRP37 will manage it!
There is one big advantage using the Play-Back-Mode:
The user can check the recorded signal multiple times; selecting different
frequencies and adjustments of MRP37.
So this way is evaluation and learning how to operate at the same time!

Go this steps:

-Execute C:\MRP373\Rec.bat
-Record up to 12 minutes real CW-audio from your receiver.
-Then exit Morse Decoder by typing Esc Esc
-Then Execute C:\MRP373\Play.bat and operate like advised in readme.txt
-Watch the text window and see Decoder results in time.

I did and they wouldn't listen. So I quit! The thinking was so antiquated. The ARRL was just a good ol boys club and had no idea of what lay ahead of them. Now in the recent year they have started to realize if they don't move off their old ways there isn't going to be much of an amatuer population to be king over.

As for running for Kongress! Not in you wildest dream. Expose my life to every thug that wants to pry into it. Good greif! As much as the prying press and oppositionparties will do I don't think the Pope could get elected let alone Jesus Christ himself.

Regards
James

3618. Logging Software

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-08 00:00:00 UTC
From: rsirois@stny.lrun.com
Message-ID: <3647b5a3.3752675@news-server>
Source record: 27068

Hi folks! I'm interested in obtaining logbook software and decided to seek advice here, where I figure most folks keep some sort of log. I'm currently keeping my log on handwritten sheets, and do not intend to discontinue this. What I'm interested in is transposing those sheets into a logging program that will assist in determining repeat contacts, tracks award criteria and normal statistical functions. I'm not a contester, but functionality in a contest situation is a plus (hey, things change, right?). I'm more interested in ARRL award criteria more than anything. Canned award criteria (WAS, WAZ, DXCC, etc) is a definitely must have, and I need to have the ability to add my own award criteria (such as the ARRL Friendship Award, Ragchewers, etc).
So, what I would like to hear from you folks, is what software YOU use, what you like about it, what you don't like, and whether or not you've seen/heard of packages that equal or exceed your own software. I'm leaning towards Public Domain/Freeware packages, but will consider decently priced Shareware programs. Operating system is not important, I can handle DOS or Windows based programs, as a matter of fact, I'd probably prefer a DOS program if it has the same functionality as a Windows package. Storage of data in a .DBF format file would be an incredible plus.
Anyway that's it. I'll be standing by.

I agree with you, Keith.

I remember QSTs and handbooks from the 60s had in them projects for tranceivers, receivers, and transmitters that were the equal of any commercial rig. Check out the 1998 handbook-- direct conversion receivers, QRP transmitters, antenna tuners, et al.

If it is reasonable to homebrew sophisticated gear similar to modern commercial rigs, why are there no projects?

Walt,

The question is: Which Callbook? Are you referring to the Buckmaster CD, the QRZ CD or some other software or web page, or do you mean a printed callbook? Which is best? I am fairly new at this stuff. (Initial license was a General Class on Sept 17, just upgraded to Advanced last week). I'm waiting for my QSL cards to arrive from the printer and I have yet to receive my first ARRL materials. I want to QSL correctly, since I've made around 200 contacts in 82 DXCC countries so far and it would be nice to get confirmations. (The first forty of these were made during the recent CQ Worldwide SSB Contest). Many of the stations indicated "QSL via the Bureau...". Are they referring to the ARRL QSL bureau or some other entity? I got a pie in the face for asking about a DJ call prefix on rec.radio.amateur.dx, so I don't want to post my questions there.

By the way, my station is an old Yaesu FTDx 560 and an FL2000B running into a ground-mounted Butternut HF6V-X vertical.

Thanks in advance,

Curt Breneman

BID: $OPDX.382
November 9, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, WK3N, KI4RU, KN4T, N6RT, W8CNL, N9AG, K0RS, DJ5AV & DX News Letter, F5NOD, F6AJA & LNDX, G3SXW, G4BUE & DX News Sheet, ON7YO, PA3DMH, PS7KM, SP5UAF, VK9NS & HIDXA and ZL2AL for the following DX information.

3D2, FIJI. Lee, 3D2VA (ex-VP2VE), is active on all bands, SSB/CW. However, Lee is on most mornings on 20 meters between 1100z and 1300z around 14165 and 14226.5 kHz. He was also heard last Friday on 24935 kHz around 2315z. QSL via WA2NHA.

8J, ANTARCTICA. Several bulletins state that the Japanese Antarctic Research Expedition station 8J1RL at Showa Base, Ongul Island (AN-015) is now active. They report that the station has been heard on 21228 kHz at 0900-1000z.

9K, KUWAIT. You only have a few days left to work Bob, 9K2ZZ, because he is leaving Kuwait on November 14th. He has been very active these past few days on 40 and 10 meters. His QSL Manager Ray, W8CNL, states that as of November 5th, Bob has made 162,498 QSOs. Look for Bob to be active on 160-10 meters including all 3 WARC bands on SSB, CW, and RTTY.

A5, BHUTAN (HIDXA trip postponted). Your editor received a letter from Jim Smith, VK9NS, who was planning to go to Bhutan during the last week of October or the first week of November, but the following was reported by Jim: ".... I have reluctantly decided to postpone my planned travel for the time being for several reasons. We have had major problems on Norfolk in the last two weeks involving air travel to and from the island. The mail situation has been terrible to put it mildly. This has been partly due to an extended period of very poor weather conditions. In one 36 hour perriod alone the island had between 12 and 14 inches of rain (depending on location) with high winds and great deal of disruptions

to power and island facilities. All the antennas survived but one tower was almost lost but saved by its safety guying system. We are used to these storms from time to time and there is still much to be done here. There will be some disappointment at this decision however as you are aware this planned visit to MOC was not intended to be a DXpedition (see HIDXA Release) but rather a means of getting things organized for the near future. Many of the donations received were linked to a DXpedition type activity. There is a great deal to be done in Thimphu so that a viable station system is in place and ready to go. It is some years now since HIDXA donated a considerable amount of amateur radio equipment (some 10000 USD) to the Wireless Division (now M.O.C.) as a means of assisting Bhutan make a start. It has been a long and difficult road for MOC (and HIDXA) trying to get the necessary Telecommunications Legislation in place to permit the hobby of Amateur Radio and other Telecomm, related matters. Bhutan has been a long time project of HIDXA as you know..... We will return to Bhutan as soon as it is practical to do so and when I can travel to Bangkok more easily. Will be back in touch with you. Warm regards and Tashi Dalek! (may your journey be a safe one)....."
73, Your in Amateur Radio, Jim VK9NS, HIDXA

BQ9P, PRATAS. Remember to look for activity this week (refer to OPDX.381). The operation will take place between November 12-19th. The callsign will be BQ9P and not BV9P as used in the past.

CORRECTIONS TO OPDX.381. There were two minor typos in last week's bulletin. Under "3W, Vietnam", Coly's (UA0FM) Vietnam callsign should have been 3W5FM, not 3W5FW. Also, under the "Thanks to" credits the callsign US0SJ should have been UA0SJ.

C6, BAHAMAS. Dick, N4RP, plans to be active as C6A/N4RP from Bimini (IOTA NA-48) between November 20th and December 2nd. This includes a low-power all-band entry in the CQWW CW Contest. Outside of the contest, Dick will be active on all bands including the WARC bands. Activity will be mostly CW. QSL C6A/N4RP either direct to Dick's home QTH (2805 Casita Way, Apartment 115, Delray Beach, FL, 33415) or via the W4 bureau.

E3, ERITREA. The "Space A DX Group" is on the air now as E30GA. The group had a two day delay in operations due to their equipment being held up in customs for two days. Currently they have three stations up and active. According to "The Daily DX", authorization was granted to the group for 30 meters on a 2nd class basis. This means they can not interfere with other non amateur transmissions. Also reported, the group will mostly be using the E30GA callsign, even though the operators have received their own personal callsign (Joe/E30GA, Vance/E30FA, Bruce/E30JA, Franz/E30BA and Elvira/E30IA). QSL cards for E30GA go to K4JDJ, all other callsigns go via their home calls.

FT5Z, AMSTERDAM. The team of F5PFP and F5SIH (the two FT5ZH operators) are on Reunion Island until November 10th. They will leave on the ship "Marion Dufresne" for the long trip to FT5W, FT5X and FT5Z. They plan to arrive on Amsterdam November 24th. Operation start-up is scheduled

for November 27th.

J6, ST.LUCIA. The SouthWest Ohio DX Association is again organizing an operation from here for the CQWWDX CW Contest. Their station J6DX will be active as a Multi-operator, Multi-transmitter entry in the contest. A total of seventeen operators will install and operate the "Field Day" type station this year. The team will begin arriving on the island on November 22nd. The first on-the-air activity will probably take place the next day. Operations will wrap up on December 6. Look for SSB, CW and RTTY activity on all bands. The group will also have a KW and 5-over-5 yagis on 6 meters. Nine veteran members will host eight rookie operators. The veterans of past J6DX adventures are: Dean, AC0S/J68AH; Jack, K9JE/ J68AR; Steve, N8BJQ/J68AI; Bob, N8NR/J68NR; Steve, N8SM/J68AG; Scott N9AG/J68AS; Ron, W8ILC/J68AM; Frank, W8OK/J68OK; and Kirk, W8QID/J68ID. QSL cards for these ops go to their home calls. Newcomers are: Don, K8NOZ; Lou, K9LU; Gary, K9MMS; Gary, KI6T; George, N2GA; Don, N6JRL; Leo, S50R; and Geoff, W0CG. QSL arrangements will be announced for these operators. The group will be active in the ARRL 160 Meter contest working all who call. The call used will be J6DX or J6A. All QSLs for J6DX or J6A should be sent to N9AG. E-mail requests for bureau replies will be honored. A special effort will be made to activate all operators on the U.S. Thanksgiving holiday, November 27th. Activity will take place in the U.S. Novice band, 28.1 MHz to 28.2 MHz CW and 28.3 MHz to 28.5 MHz SSB. A special souvenir of St. Lucia will be sent to the station making the most contacts with St. Lucian stations. Contacts count only once per mode. Ties will be broken by lot. Anyone contacting five or more J6 stations will receive a certificate. Send a large SASE to N9AG for the certificate, please.

JD, OGASAWARA. Look for Den, JI1FLB, to become active between December 30th and January 2nd. His callsign was not provided, but his activity will be on all bands (including 6 meters) with some satellite operations.

JI, AWAJI ISLAND (JAPAN). Takeshi, JI3DST, who was active this past weekend from here, will again be active November 14-16th during the "1998 Japan International DX Phone Contest". Activity will be mainly 15 and 10 meters. This island is located in the Honshu's coastal island group and has the IOTA of AS-117. Details on the contest will be provided to all OPDX InterNet Subscribers as an additional bulletin.

PJ, NETHERLANDS ANTILLES. The "DX News Sheet" reports that Joeke, PA0VDV, will be active once again from here between November 29th and December 28th, probably as PJ9/PA0VDV. Activity will be from from Curacao with operations mostly on CW. QSL via home callsign.

PY0S, ST. PETER AND ST. PAUL ROCKS. Karl, PS7KM, reports that the NATAL DX Group of Brazil continues preparations for their "March 1999" DXpedition. The followings operators will participate in this operation: JA4MRL, PT7AA, PS7KM and WX5L. The QSL information is as follows: CW contacts go via PT7AA and for SSB/RTTY go to PS7KM, via callbook. The team plans to operate 160-6 meters for 12 days or for two full consecutives weekends. Priority will be given to the bands on 6/40/80/160

meters and RTTY. They mention the possibility that this will be one of the last DXpedition, to these rocks due to the increasing control of the area by the Brazilian Navy and Dept. of the Environment. There are already four researchers from those departments on the rocks on a permanent basis. The DXpedition projected budget has been set for 11,000 (USD) and that 70% of that amount will be allocated for the leasing of a sailboat, which will be anchored nearby for the entire duration of the operation. Therefore, they are requesting financial support from the ham radio community, clubs and DX foundations which would help make the difficult access to these rocks possible. If you would like to help, please, send your contributions/donations to: PS7KM or WX5L or JA4MRL, via callbook.

QSL INFO AND NEWS
The W5RRR station at the Johnson Space Center will be issuing a STS-95 commerative QSL card for those who made a contact during this operation. The operator stated to use the following address: NASA/Johnson Space Center, via Amateur Radio Club, Houston, Texas 77058

The Jacky's E31AA and J28AG logs are now on-line at: http://www.qsl.net/n6ed/f2cw_search.html

EP3HR QSLs. Mario, I2MQP, reports that he has the logs for January 1st through February 6th and May 8th and June 7th (in 1998). He also reports that all cards have been answered for this period.

MORE ON YA1R. OPDX received a report that the YA1R station, which was active a few weeks ago on 15 meters CW, the operator stated to QSL via RW3LO. This is also listed as the route by RW1QM on the WEB page: http://www.ampr.spb.ru/search/index.html

Log searches can be found for FG5BG (1998 CQWW SSB Contest), FG/N6RT, FG/N6ED, FG/K6RO, and FG/W6KK logs at: http://www.qsl.net/n6ed/fgsearch.html
Please note that K6RO can only handle FG5BG QSLs for the 1998 CQWW SSB Contest operation. All others must go direct to Georges FG5BG. Don't forget to look at N6ED's great index of log search pages at: http://www.geocities.com/SouthBeach/Palms/8651/

SPECIAL EVENT STATION. Look for SN0SUL to be on the air until November 15th. This special callsign is for celebrating the 80th Anniversary of Regaining Independence by Poland. The station QTH is Sulejowek (20 km east from Warsaw) the place where Joseph Pilsudski lived. This Polish national hero was a Great Marshall and Leader-in-Chief. Look for SN0SUL to be on all bands (CW, SSB, RTTY, SSTV). QSL is preferably via the bureau via SP5ZCC.

SPECIAL EVENT STATION. On November 11th. 1998, Ham Radio of the "Radio-Club des Fagnes" (Nothern France) will activate a special event station from the FORT DE LEVEAU located in Feignies nearby Maubeuge in order to commemorate the 80th anniversary of the end of World War I. The special

callsign used will be TM1WW (1WW for 1st World War). The timetable of the activities is planned as follows :
0001 - 0800 TU - 1835 kHz and 3536 kHz in CW.
0800 - 1300 TU - 7025 kHz in CW.
1300 - 1700 TU - 40/20/10m in CW and SSB on request.
A special QSL card will be issued for the Event. QSL information: either via bureau or direct (SASE for France, SAE + 1 IRC for DX) is to be sent to Daniel LIBERT F5SPW, 33 rue Honore Lespilette, F-59330 Neufmesnil, FRANCE.

SPECIAL EVENT STATION. Also, look for TM8OA to be active to commemorate the 80th anniversary of the Armistice (November 11, 1918, end of WWI). The station TM8OA will be active up to November 15th, on all bands and modes. QSL via F6KVD.

T8, BELAU. Dave/KJ9I, Rudolph/NF9V and John/NZ9Z will be active from December 8-17th, as T88II. Their activity will be 160-10 meters, including the WARC bands. Their top priority will be activity on 160 meters. QSL via KJ9I.

TL, CENTRAL AFRICA. Alex, PA3DMH, reports that Alex, TL5A, will be paying special attention to Topband again. Alex listens for JA stations at 2100z on 1833 kHz (QSX 1912 kHz). Also, after Japan's sunrise he will listen for Europe. Both North and South America, along with Europe should listen around 0300-0430z on 1833 kHz. Alex, PA3DMH, reports that direct QSLs for the TL5A backlog are gone. Cards received are in and out and it takes approx. 2 weeks depending on his job workload. Bureau cards are on their way from the printer, and Alex is hopeful that he will issue the first bureau requests this month. Because of the extent of the TL5A operation, Alex has decided to get a TL5A Website up and running. Although the site is still "under construction" the page is available at:
http://www.igr.nl/users/pa3dmh/tl5a.html

VP8, SOUTH SHETLAND ISLANDS. The "DX News Letter" reports that Stan, SP3BGD/HF0POL, will leave South Shetland in early December. They also mention that in 1999 there will be "NO radio amateur on this base". QSL via bureau to SP3SUN or direct: Piotr Miranski, ul. Rydza Smiglego 27/5, 65-610 Zielona Gora, Poland.

WP2, U.S. VIRGIN ISLANDS. "The 59(9) DXReport" states that Dave, WD5N, will be a Single Op/All Band entry in the upcoming CQWW CW Contest from WP2Z. QSL via KU9C.

ZL9, KERMADEC. From a press release dated November 5th, the New Zealand Kermadec DX Association team met with the New Zealand Department of Conservation officials on October 31st in Wellington to finalize details for the ZL9CI Dxpedition. The meeting was cordial and defined what is permissible on Campbell Island in terms of protection for the wildlife flora and fauna. The Conservation Department was extremely helpful and has allowed the team to add an additional team member to the group. The team's additional member is Murray, ZL1CN who is a very capable operator and New Zealander with contest experience as a member of the ZM2K Kiwi

Contest team. The complete press release will be sent out to all OPDX
InterNet Subscribers as an additional bulletin.

>but again you have to be willing to try.

I think you're underestimating the startup costs.

I've been playing with electronics for decades, and have a reasonable connection of electronics tools - crimpers, temperature-controlled soldering iron, power supplies, scope, signal generator, frequency counter, some multimeters, etc. I've done some building with discrete surface-mount parts already, and like it - no pesky holes to drill.

But the only way I have at the moment to produce PC boards is hand-drawn etch resist, or the method of covering the board with adhesive tape and cutting and stripping the tape from areas to be etched. Neither of these is practical for multi-lead surface-mount ICs. To use these, it appears that I will need a PCB layout program of some sort, as well as a PC and laser printer - I have none of these (I use a Mac and an inkjet printer).

Using PICs, EPROMS, PALS, or GALS requires a programmer plus programming software. DSP development kits also cost significant money. Emulators for debugging this stuff cost *lots* more.

Actually writing software doesn't bother me - that's my background. But the cost of all of the associated hardware is daunting. I'd guess that it would cost $3K-4K (CDN) to obtain most of the stuff named above (without the in-circuit emulators). That's nothing at all for a business, but it's a significant amount of money for a student, and many times the cost of a commercial transceiver.

Things are improving. PCs are now usable computers, and the next machine I buy will be a PC. There is now one place in town where I can buy a small selection of surface-mount parts in small quantities. (A few years ago there were none). Digi-Key has a Canadian arm now.

I think that engineers working in the electronics industry don't have any idea how much more difficult it is to obtain resources that they take for granted when you are an outsider. For a while, I worked at a place that did a lot of electronic design work, so I had access to data books and good test equipment and an IR reflow oven and solder paste applicator and many other neat and useful things. But I lost access to all that when I left, and I'm dependent on my own resources now - which

are limited.

Ray, I have been using LOG-EQF for many years and like it very much. It is shareware. Very well done by Thomas Dandrea - N3EQF. It will do all the things you ask for.
It is a DOS program.

IMHO this newsgroup is by far the worst place to gauge amateur radio opinion. The quantity of flames & absolutely wrong answers is truly scary.

I think the "don't call CQ on 2 meters" admonition comes from the early days of 2m FM, when most new users had come from HF. Long, drawn-out CQs are necessary on HF, since we don't have channels with people sitting there monitoring - you have to attract the attention of someone tuning across the entire band. Of course, such a long CQ is simply an annoyance on a repeater. Hence, "don't call CQ".

But really, when you say "monitoring .91", what you really mean is "CQ". Why not say it? Just be brief - say "CQ from W9WI". That's what I do. (Unfortunately, the "cliquish" comment elsewhere in the thread seems accurate & I don't get many answers...)

I used to use LogPLUS - it's a very well done logging program and tracks all those awards you mention, plus you can add your own. It's DOS-based and is easy to use. Has callbook interfaces as well, but I don't think it'll do any contesting duty to speak of. (I have yet to understand why people want a casual logging program to also handle contests rather than just using a dedicated contesting program.

I stopped using LogPLUS about 8 months ago, in favor of LOGic for Windows, which is much more powerful for my needs (custom reporting, certain kinds of award tracking, etc.) - it's probably the best Windows based logging program around but requires some horsepower to make it perform reasonably well.

If you're not that versed in Windows and just want something that'll do the job, I'd go with LogPLUS. If you want Windows-based, then LOGic would be the way to go.

You mention shareware/freeware - keep in mind that you'll probably get what you pay for if you go the freeware route. I think you can test drive both of the ones I've mentioned for free.

LogPLUS: www.logplus.com
LOGic: www.hosenose.com

Hi all,

Being new to the ham radio hobby (and interested in working DX on HF), I was wondering if anyone could tell me (in simple terms) what significance the various readings mean for HF DX activity they give on the WWV propagation reports at 18 past the hour? Is there a web site that explains it in detail?

1. Someone said the higher the solar flux reading the better the signals...

2. The lower number the A index is better because less signal is absorbed...

Is that right? Im not sure what the K index is...

How do these reading work together to tell me something about DX on the HF banks?

Thanks...

Jerry

Ray asked a question about a logging program:

Ray, I use and love LOGPLUS. I tried all of them on the net and loved
it. It tracks all awards and allows you to program your own if needed.
But search and see what "YOU" like. I just happen to like log plus.

A Mac? Lets see, that's Apple's little Etch-A-Sketch, right? :-)
The graphic design industry seems to like it, and there are
a bunch of cheap or free graphic layout programs for it. (There
are better free tools for the PC, purpose written for board layout,
and more of them, but there are tools for the Mac which will
suffice.)

An inkjet printer is fine for printing on transparencies to make
exposure masks. Epson has some special inkjet transparencies
just for such use. You can also print 2x on paper and go to Kinko's
and have it reduced onto a transparency for a few quarters.
(This is actually the better way to do it. The extra quarters are
to do a few test copies to get the copier adjusted to exactly the
right reduction before you shoot the transparency for real.)

A cast off aquarium, pump, and heater, make a dandy bubble
etcher for free. And old Bessler enlargers can often be had
just for carting them away (the photo industry has gone to
computer printing). This way your transparency doesn't have
to be exactly 1:1, as it would have to be if you contact print.

>Using PICs, EPROMS, PALS, or GALS requires a programmer plus
>programming software. DSP development kits also cost significant
>money. Emulators for debugging this stuff cost *lots* more.

Well, once more you're hamstrung by the Mac. You can build a
PIC programmer for about $2 that works off the printer port of
a PC. For about $5 more, you can make it program PALs and GALs
too. The software to drive it is free, and available for download
from the net. A suitable DSP development kit for amateurs is
the Analog Devices EZ-Lite series, cost under $100. An ICE
is much more expensive, but a clever amateur can avoid the
necessity for an ICE with a bit of creativity. (I've always found
ways to debug systems without resorting to an ICE.)

>Actually writing software doesn't bother me - that's my background.
>But the cost of all of the associated hardware is daunting. I'd guess
>that it would cost $3K-4K (CDN) to obtain most of the stuff named above
>(without the in-circuit emulators). That's nothing at all for a
>business, but it's a significant amount of money for a student, and
>many times the cost of a commercial transceiver.

You guess wrong. Once you have the PC, the rest of what you need
won't cost much at all. Now you won't have a slick development package
like a $13,000 professional package, but it will do for an amateur on a budget.
In fact, up until a couple of months ago you could get a demo version
of that $13,000 package for free. It was limited to 30 devices per
design, but otherwise completely functional. A clever amateur could
break his project up into subsystems of less than 30 devices each,
and have all the advantages of a full blown professional design package.
(That's exactly what this clever amateur does. I have schematic
capture, spice simulation, board layout, and autorouting, all available
at the click of a mouse, and I didn't spend a dime for it.)

>Things are improving. PCs are now usable computers, and the next
>machine I buy will be a PC. There is now one place in town where I can
>buy a small selection of surface-mount parts in small quantities.
>(A few years ago there were none). Digi-Key has a Canadian arm now.

I don't know if Tech America ships up there, but I found out that they
have just started carrying small quantities of solder paste. That's
been hard to find in small amounts (and an amateur can't use up
a large amount before it spoils, solder paste doesn't store well).
I've been bumming paste from a local board house which buys it
in bulk. Now I can just drop by Tech America and pick up a small
amount when I need it. They have SMD parts on rolls too.

>I think that engineers working in the electronics industry don't have
>any idea how much more difficult it is to obtain resources that they
>take for granted when you are an outsider. For a while, I worked at a
>place that did a lot of electronic design work, so I had access to data
>books and good test equipment and an IR reflow oven and solder paste
>applicator and many other neat and useful things. But I lost access to
>all that when I left, and I'm dependent on my own resources now - which

>are limited.

Well, you just have to be a bit more clever. I still get some data books from the manufacturer's reps (you can usually get last year's books for free, just ask nicely), but mainly now you'll find the data is published on the web in PDF form, so you can download it as you need it rather than having to keep a large paper library.

Good test equipment can be important, but it can also be 5 or 10 years old (or even much older in many cases) and available very very cheaply on the surplus market. It isn't as push button automated as the new stuff, but it serves very well. Most of my test equipment is older HP and Tek stuff that I bought dirt cheap at hamfests. (Some of it needed a little work, most didn't.) My test bench has equipment totaling tens of thousands of dollars new price, but I didn't buy it new and only have hundreds of dollars invested in it.

You don't need an IR reflow oven, a little Pyropen Jr with a static hot air shroud and a steady hand will do. And the solder paste applicator is a wooden toothpick in my shop. I'm not in the mass production business, so I don't need the sort of equipment needed for that. You don't either. My SMD tool kit is a Pyropen Jr, a good jeweler's loupe, a sharp pair of tweezers, some wooden toothpicks, and a bit of modeling clay (the latter is to form heat dams so you don't reflow something you don't want to reflow when doing rework). You don't need a $1200 SMD rework station. In fact, though I have access to one of those, I find them usually more of a bother than a help. I can have the job finished before I could get everything disassembled and mounted on the stupid thing so I can use it. Again this is something you'd want in a production shop, but an amateur isn't running a production shop, so he can do without it.

Finding ways to do things cheaply, but still achieving professional results, is half the fun of working as an amateur. You can substitute a little ingenuity for a lot of dollars.

I just picked up a Bowtie antenna and it doesn't match up to the manual I
have for the HF5B The dimentions are the same(12ft x 6 ft) but it is
missing a few traps.And it is too small for their 10/11 meter bowtie.
Did Butternut make another Bowtie..maybe a 3 Band model???
If so,is there any manual available.I will pay copying and mailing costs.
Thanks in Advance

I have been using XMLog for a couple of months, and am relatively
pleased with it. Although it doesn't support a lot of the functions that
the fuller featured programs like LOGic and DXWIN, it has one huge
advantage over the other two: it is totally free. Works wonderfully for
a free program.

Do a web search for it, there is a home page where you can
download the program.

Gary,

Thanks for your reply. In my initial post, I guess I should have expanded my comments. DX'ing is definitely not the "pinnacle of amateur radio to me." Just because I believe DX'ing is an enjoyable aspect of Amateur Radio, I was not precluding the other aspects. I too enjoy ragchews, nets, project building, etc. that are part of HF. That is what makes Amateur Radio such a delightful hobby. There is so much available to meet everyone's tastes. DX'ing to me is not a 30 second contact in a pileup. It is listening carefully for the DX station who may be using very modest equipment, picking his or her faint signal up while everyone else is hammering away at the 59+ pileup, and enjoying a pleasant QSO much like a stateside QSO.

>
> If it is reasonable to homebrew sophisticated gear similar to modern
> commercial rigs, why are there no projects?

Very good question. I think there is very likely many reasons why you don't see such projects anymore.

Probably top on the list is the fact that commercial rigs have gotten much cheaper and much more capable. If you _aren't_ interested in homebrewing per se, but merely seek to get on the air inexpensively, modern rigs are an excellent solution. A certain number of those who used to homebrew were doing so largely as a matter of economics rather than real interest. The economics have shifted, and now these people can operate without the tedium of assembling a station from scratch.

Another reason undoubtably has to do with the rise of the Tech licensees. Techs operate on VHF+, in bands where traditionally hams have done relatively little homebrewing. Heck, it is pretty difficult to find any real ham literature on building (say) a 2m fm transciever, inspite of the fact that modern chipsets make it relatively inexpensive and simple. Is such a radio as fancy or small as your modern HT? Probably not. Can you learn alot from building one? Sure. And that is at least one of the major goals of amateur radio. Even if we do use commercial radios, we are supposed to know something about how radios work, and homebrewing is an excellent way to get hands on experience in how radios work.

Lastly is a question of focus. Much of the homebrewing that one sees is centered in the HF bands, mostly Morse, and mostly QRP. Why is that? My guess is that it is because most commercially produced radios are poorly suited for the type of operation that these people like to do. You can design and build a compact, simple, low power rig and put it in a nice small box. It can be cheap (< $100 easily), be relatively stingy on battery power, and suitable for portable operation. Because it is cheap, it doesn't need to be all things to all people. The QRP community has focussed on some important goals, and has delivered quite a number of designs that work quite well.

The unfortunate things is that other groups have not done the same. Recently on the back of QST there have been Kenwood rigs that act as either SSTV transcievers, or as GPS/APRS beacons. Pretty nifty gadgets. While reproducing the same level of compactness and ease of use is challenging, the availability of cheap FM radio components, cheap microcontrollers and dsp means that you can do much of the same sort of thing yourself, and much cheaper than Kenwood will sell it to you.

Want some ideas about fun, cool, inexpensive projects to do?

a) a number of designs for differential gps decoders are floating around the net that can be coupled with a commercial gps receiver to yield high accuracy positioning. The cheapest design I've seen costs about $25. The most expensive, maybe $100. b) How 'bout interfacing an ordinary digital camera to your HT for a SSTV encoder? No TNC, no PC. Just a small microcontroller that takes the pixel stream from the camera and sends it via sstv. Cheap digital cameras are dropping below $200, some even as low as $99. A PIC or Atmel microcontroller probably has enough oomph to make the encoder. c) How 'bout a portable QRP RTTY rig? PC keyboard for input, LCD display? d) Digital VFOs? The Analog Devices 9850 is a cute (if teensy) chip. Last I looked, they were around $20. e) DSP demodulators for the R2 receiver? Look at the SETI League's reciever, or articles in QST.

Just some ideas..

Mark

This isn't a very good excuse against using PICs or (my personal favorites)
Atmel microcontrollers. A number of VERY cheap programmers with free
software are available for both chip families. The Atmel chips I've been
using have 2k of flash memory on them, with a UART, an analog comparator, and
several other useful goodies. Atmel's own development kit costs $50, but the
software they give you can all be downloaded from their webpage. They have
both assemblers and simulators available. Very nice.

In-circuit emulators are nice, but you CAN develop programs without them.

You can experiment on a shoestring. Much of the equipment you mentioned is
nice to have, but far from essential.

The Internet has helped me locate suppliers for chips that a couple of years
ago just wouldn't have been available to me. Mail order is an excellent way
to go. Sometimes it does seem some creative begging/reorganizing is required
to get over some minimum order humps, but it is possible.

> are limited.

Consider them challenges. One thing to consider is that if you are going to encourage homebrewing, not many hams would have all the test equipment you had anyway. A key part of the success of QRP homebrewing efforts is that people SHARE ideas and designs, and they get reused. Is it cool to use a $300 Xilinx FPGA to make a Reed Solomon decoder? Maybe, but I doubt many hams will be willing to cough up the bucks to make one. On the other hand, if you say "Gee, you can make a tremendously cool Morse encoder/decoder using this $3 chip, a few audio filters, and a $10 programmer you can build yourself", you might get more people interested. And that benefits the ARS as a whole.

Let me weigh in on the XMLOG program... I'm totally happy with it and
although it is not a "contest" logging program, it is a very well done
all round log that will track DXCC, WAZ and WAS. I've used it for a
couple of years now and am totally happy with it. I guess it depends on
how complicated you want a program.. I wanted something for everyday use
and this one has filled the bill very well...

You can find it at

Folks,

I'm not sure that new rigs have become all that inexpensive relative to
other things. For example, in 1973 it was possible to purchase a
high-end HF transceiver for about $400 and a legal-limit amplifier for
around $1,200. Now these range from $1,500 - $8,000 for the transceiver
and $1,800 to $4,000 for a legal-limit amp (source: HRO catalog). This
isn't much progress in pricing.....it's like buying a new car once you
have the tower/antenna and rig in place. The situation for VHF/UHF
isn't much better. What's needed is a return to "discretionary income"
pricing levels -- after all, it's just a hobby -- right?

Gary, you have made some good points. Some hams forget that others don't
see things the same as they do. What's important to one, may not be a big
deal to another. In addition to DXing, I also enjoy playing with ATV.
A fellow ham I know, thinks that ATV has to be one of the most boring
things to do in ham radio. We don't agree on that issue and I'm sure
we'll never change each other's feeling about it. Still, no matter what,
let each ham find his or her own things to enjoy. As long as it's legal
and follows the proper guidelines & practices it's OK for them.

73,
Bob

Marv,

BG6 is a Chinese callsign. They've implemented several new license
classes, BG, BY and BA callsigns are assigned to them.

> ham radio this month!)

I have a similar story. I have only been licensed for about 3
months, and was looking around the novice 15 meter band when I had had my
license for about two weeks. Thinking that I might get an answer if I
sent my CQs on an even freq, I tuned to 21.150 and called CQ.
At the time, I was a Tech+, and having a real bear of a time
copying CW (still do, most times!). After a single call, V73GT came back
to me and asked me to QSY up 5, since my call was interfering with the
California based DX beacons. I didn't think that I had copied his call
correctly, but verified it on his next TX, and when he said QTH was
Marshall Islands I was thrilled. We had a pleasant chat, but wouldn't
you know, there was a home emergency and I had to QRT.
My DX log so far is an astounding 9 countries, most of them here
in the western hemisphere. But I have had the satisfaction of having my
call answered by Croatia, New Zealand and Bulgaria. And the time the
station in Hawaii answered my call, when all I was doing was jumping on
to the end of a pile up. I didn't even know who they were calling, but I
figured, "Why not?" And I was answered before all the big guns!

I am really enjoying this hobby. Maybe someday I will get on to
the VHF/UHF bands, but for now I am having way too much fun down on the
HF frequencies.

Greetings folks,
I'm currently in a desperate search to replace our aging HF Weather Fax
that is no longer produced nor are any replacement parts (Can you say
"Torsion Bar").
I'm presently evaluating some different systems. I want to go PC based
and email the files. One item I'm looking at has a data base of all stations
w/schedules. It can be set up for unattended use (big plus) with a custom
schedule or auto detect all broadcasts. The problem is that it doesn't do
well at detecting the farming pulse. I need something very reliable at
properly farming up the picture. Perhaps some SSTV people can help.

Thanks in advance,

ET2 Dave King, USCG

On the inside rear cover of my August 1959 CQ magazine is advertised the National NC-400 receiver. Suggested list price is $895. With inflation that's about $9000 in today's dollars and you still have to buy the transmitter. Now that was a top of the line receiver, but that's still way more than today's expensive stuff.

Pay a bit more -- $89 and get DX4WIN.
It is arguably the best Windowz based loggin program.
Get a demo from http://www.erols.com/pvander/ and try it.

I plugged $400 into a calculator that adjusts things for inflation, and $400
in 1973 inflation adjusts to $1483 or so in 1997 dollars. Of course, modern
transceivers are generally much more capable than the transceivers available
in 1973, supporting a wider variety of bands and operating modes. I'd say
in some very real terms that prices have fallen, and capabilities of modern
rigs has gone up.

3676. November Propagation Forecast

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-10 00:00:00 UTC
From: ids@nol.net
Message-ID: <3647ef51.54258203@news.nol.net>
Source record: 27027

PROPAGATION - by AD5Q HOUSTON, TEXAS -- NOVEMBER 1998

November is a great month for 10 Meter propagation over northern latitude day paths. Much of the Arctic is in darkness now, so polar propagation is more difficult than it was around the equinox. Over the past month, solar conditions have not always been favorable. The flux remained below 120 for the last two weeks of October. This is not high enough to really open up the band. Conditions were marginal to Europe in the CQWW SSB contest for most of the US, though stations to the east and south had good paths.

As I write this, the flux is back up to around 150. There were several days of excellent propagation on all bands - and then came the flares. At this early stage of the sunspot cycle 10 Meters is sensitive to the monthly swings in solar flux. A year from now, the monthly dips in flux levels should be higher than the current peaks. Conditions will be awesome, though the bands will always be sensitive to flares.

Our current moderate solar numbers are sufficient to provide reliable communication on 15. This is where most of the daytime activity was in the CQWW, as conditions to Europe were excellent. We have come to expect good 15 Meter openings almost every day. In the fall (in contrast with the late spring season), 15 is a daypath band. Some signals are currently making it over the pole, but this path will be increasingly difficult as winter nears. For now, 15 is loaded with activity that will move to 10 when flux levels improve.

20 now closes in the evening, and is no longer a night path band across the northern hemisphere. 15 is more optimum for day path work, but 20 still has its place. Conditions are ideal across paths were the sun is low in the sky, or has recently set. In addition, night paths are wide open in the southern hemisphere. The wise DXer knows to check the morning long path several times per week for unusual countries many would consider rare. He beams about 200 degrees south after sunrise for the first signals around the south pole from southern Asia. From Texas, this is the daily opening to India and Sri Lanka. These drop out early, but the opening broadens to include the Middle East, Russia and then the rest of Europe with east Africa. From other parts of the US this opening peaks to different areas. Since these DX windows are narrow, there is little pileup competition from stations to your east or west (they have their own band peaks). It is also good to be south of your competition.

For northern latitude night path work, the band to use is 40. Fluxes are high enough to keep the European path open through the evening for us, though activity is light where most are in bed. It is best to work

into areas where the sun has risen. In the evening the signals from Russia are excellent, and then the opening sweeps across Europe. The best path to Asia follows our own sunrise. As you may have noticed, big antennas rule 40.

Go to http://www.guam.net/pub/midxa/ and when you get there,
click SPECIAL PAGES and then DVK SOFTWARE. It's not free, but
it's about as close as you can get. You have to build a simple
homebrew interface to go with it.....

Used to be CHINA -- BY
TAIWAN -- BV

Currently
CHINA -- BA to BL, BY, BZ
TAIWAN -- BM to BV

But some unknown, as: BS, BT, BW, BX

BG6 should be in south China.

Now correct that 1973 price for the inflation started by Lyndon Johnson's
"guns and butter" budgets (multiply by 8). That 1973 transceiver costs
$3200 in today's dollarettes, and that linear costs $9600. But in real life,
a transceiver much better than a top of the line 1973 unit can be purchased
for about $1600 (and ones better than the average 1973 transceiver for
under $1000 street price). And a good linear still costs under $1200.

While our salaries generally haven't kept pace with inflation, most of us
are still making a large multiple of what a comparably skilled person was
making in 1973. So while today's radios might not be fully 8 times cheaper
in terms of man hours of labor, they are still considerably cheaper than in
1973.

3684. FS: Sommer (DJ2UT) 7-Band Beam

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-10 00:00:00 UTC
From: donstone@gate.net
Message-ID: <jq%12.261$QO1.242409@newse2.tampabay.rr.com>
Source record: 27035

I have decided to sell my Sommer DJ2UT, XP70 seven band beam
(40, 30, 20, 17, 15, 12 and 10 meters).

The XP70 series beams are designed for the amateur with all-out
performance in mind. Although the boom length is only 20 feet, XP
70s have easily outpaced much larger, conventional antennas in
careful testing. The key is the total elimination of traps, which rob
performance from even the largest of multiband antennas. Because
of their high efficiency, XP70 series antennas suitably replace 4-
and 5-element antennas of conventional design. You can read about
the XP70 at http://www.sommerantennas.com/xp704.html

To avoid the need for support wires, I purchased the heavy-duty
commercial extruded-aluminum double boom version for $1300.00.
I will sell it for $450. It is disassembled and ready for pickup.

I'm located in the Clearwater, FL area (about 20 mi. west of Tampa),
and cannot ship (the booms are 20 foot long, continuous).

Don Stoner, W6TNS (donstone@gate.net)

Incentive licensing in concept was probably a good idea at the time it was first discussed, but they way it was put into practice created a terrible situation which still has consequences today.

Sometime in the early 1950s, someone proposed that everyone who held a General or higher license be granted all amateur operating priviliges. It was about that time when the Novice and Technician class licenses came into being. The Novice was good for one year and not renewable. It was either up or out after that year. The Technician was designed for technical experimenters and was limited to operating priviliges, I think from 220 Mhz and up, with 50 and 145 Mhz being added later. In order to get the Technician, you had to pass a mail order written test which was the same as the General, and a 5 WPM code test if you were not a Novice and already had credit for it. I think that a Novice and Technician license could be held jointly by the same person if the Novice time limit had not yet expired.

In effect, the General class was the top of the line license as far as operating priviliges were concerned. After 1952, testing for the Class A (Advanced) license was dropped, although existing Class A holders could continue to renew as Class A.
No additional priviliges were granted to Class A operators.

This was the way of the ham radio world for 14 years.

In the late 50s, some deep thinkers somewhere decided that hams were not improving themselves for some reason. They were not changing over to SSB

as fast as they should and these deep thinkers thought it may have been because many of them were too technically ignorant about the then state of the art. In some quarters this was a scandalous situation. There was much discussion of finding a way to force technical competance via the testing and reserved operating privilige process. There was also some concern that many hams were letting their code skills slip because they spent too much time on phone. The appliance operator label was just coming into vogue, and it was thought that valuable design and building skills were being lost. This debate raged in the pages of QST for over 5 years.

The final result was that on a specific date in 1968, anyone who was a licensed General class operator lost a good amount of their operating priviliges on HF. Anyone who held the old Class A (at one time the top license in terms of operating priviliges) also lost a considerable amount, although not as much as the lowley General did. The Extra Class license became the new top of the heap and if you wanted your priviliges back, you had better pass the Extra exams with its 20WPM code requirement.

INHO the largest problems with Incentive Licensing were:

1.- Taking away priviliges that already had been earned. It should have affected new people entering the service, but everyone else should have been grandfathered.

2.- The most talked about reason, technical competance or the lack of regarding SSB had been effectively bypassed by the availability of commercial equipment which actually needed less ability to use than the old AM equipment. By 1968 the
technical argument was moot. Most of us were turning into appliance operators anyway.

3.- It caused a meltdown in the interest of ham radio in the years immediatly after 1968. Take a look at the size of the Cq, and QST magazines of that period.

4.- It was one of many reasons why American ham equipment manufacturers started to go out of business.

I will always believe that Incentive Licensing amounted to a power and privilige grab by a very few people in power at the ARRL who wanted what amounted to a "country club" operating privilige setting for the good ole boys in their circle. For a very long time I thought that the ARRL and the FCC thought that General class and below license holders were held in contempt. I was a memeber of a ham radio club in the late sixties which had a sign saying "ARRL's definition of a real ham...Extra Class License... 2 letter call" It took a long time for me to get over it.

It is interesting to note that the ARRL is doing everything it can to make sure that no one looses operating priviliges with the coming license restructure. I think this stems from bitter past experience.

To some amateurs Dxing *is* the pinnacle of amateur radio, and that's
fine. I was just indicating that it is hard to convey the appeal of Dxing to
someone whose experience is limited to VHF FM repeater operating.
So you shouldn't be surprised that it is hard to interest your Tech students
in going for a HF license. I was also trying to say that not everyone finds
Dxing all that exciting, even if they do get a taste of it. People have
different interests. That's fine too. No put downs intended either way.

I did put in a bit of a jab at the archaic Morse test requirement to get on HF.
That makes getting a taste of Dxing difficult. Note, I'm not saying that CW
isn't *useful* to the active Dxer. I believe it is, at least for today. But the
Morse test requirement makes it hard to give people a hands on introduction
to the potential of HF. If they get the Dx bug, likely they'll find that they'll want
to add Morse to their Dxing arsenal, but the only test which really matters is
the one passed each time a contact is made.

I'd also note that some very good computer Morse programs are beginning
to appear, such as Analyzer 2000, which makes manual Morse skill less of
a factor in *working* CW. That seems to bother some people, but no one is
forcing *them* to use computer assistance. I think the converse should also
be true. To the manual Morse aficionado, using a computer may take away
some of the fun, but to others, it may just *be* their fun.

As I noted, people are different. That's the real message I was trying to convey.
I got the impression that you were saying that you couldn't understand how
people could turn away from the lure of Dx. What I was trying to say is that
some people never feel that lure for one reason or another.

Right on, Bob. You caught exactly what I was trying to convey.
But, OTOH, I think some people just don't know what they're
missing, and being stuck on VHF, they never will discover the
excitment that HF propagation often dishes up. It is something
difficult to describe to someone who hasn't experienced it. It's
one of those things you have to do to understand. You may love
it or hate it, but you won't know until you try it.

Folks,

I suppose it's proper to think about these prices in terms of inflation,
but I've yet to see a legal-limit amplifier for $1200. For example, the
Ameritron 1500W units are all over $2000 (AL-1500: $2,695, AL-82:
$2,195). Rigs of reasonable capability are also pretty pricey today:
(FT-1000D: $5,459, TS950SDX: $5,299, IC-R9000 (RX) $7,508...etc). Aside
from filters and DSP "frosting" (and WARC bands), these rigs do not
perform much differently from their 1973 counterparts. I've made A/B
comparisons between an old Yaesu FT-DX 560 with a second VFO (250w
output all tube rig), a receiver preamp and a 400Hz CW filter with a new
FT-1000D, and for most normal operating situations, they have comparable
capabilities. While I agree that receiver selectivity is nicer on the

FT-1000D, the technology used in the FT-DX 560 is within reach of the homebrewer, while home-brew of an FT-1000D clone would be nearly impossible. I think that the thrust of this thread relates to whether one can build well-performing rigs for less money than buying them. While it would be a major project, I think that is it still possible to home-brew good quality amateur equipment for reasonable prices.

3691. A DX night to remember

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-10 00:00:00 UTC
From: kwp@rai.ping.at
Message-ID: <74cWbM6V-jB@rai.ping.at>
Source record: 27141

It was a DX day... well, actually it was a day in the office, deadline for my show was getting dangerously closer (I am a broadcaster), when the packet cluster announced Wake. WAKE! A country I still needed for my DXCC. I of course knew everything about the DXpedition but did not expect they would put in a good signal into Europe. "Horrible pile-up. They kill each other" was the most promising remark next to the announcement.
I had only 15 minutes left before the "on air"-sign would light up in the studio. Upstairs to our ham shack. Transceiver, antenna, amplifier (don't switch it on, yet, you'll have to wait for at least five minutes).
Somebody had worked DX the day before, left the station at 14.195 and some split frequency. "Listening 200 to 220, no let's make it 200 to 230" - very promising. Just for the fun of it I gave my "last two ones" just once, and barefoot. "The Hotel Charly!" - Bingo, within half a minute! And barefoot. -- I called a friend who, I knew, needed Wake as well. It would take him five minutes to come. I had another five minutes to go. Still no amplifier. We have a club call-sign. I twiddled the knobs, called - the voice came back: "The Bravo Charly!" - Bingo again! -- No, you should never try to do the hattrick, but I am allowed to operate OE1XQC as well... Third try. This time I had to call twice.
Wake! Barefoot! Three hits in less than five minutes.
My friend arrived. I told him: It's easy. I dashed in the studio, just made it.
When I returned more than a hour later, my friend still shouted like hell. He never worked Wake.

Gary,

Not to nit pick, but according to the official CPI measurements (found at
http://www.NewsEngin.com which is a resource for working journalists))
$400 in 1973 would actually be worth $1,427 in 1997 dollars. Multiply by
3.568.
Still a lot of money.

If you asked politely, people might be inclined to do what you ask.

But posting 5 different articles, each of which needlessly quotes *all*
of the previous articles, and shouting at us in all capitals is not
a polite request. Why should we do what you ask, when you're being
boorish to us?

Dave

3703. For You, Vets

[There are many Hams who are Vets, so I felt
this was an appropriate post and an important
message. All You're-Off-Topic flames will thus
be cheerfully ignored.]

Veterans' Day is near, so it's once again time to
think about the men and women of our Armed Forces,
and to consider the sacrifices they have made on
our behalf.

Theirs has so often been a thankless job. In fact,
to this day they operate in countless essential
functions every day both here and around the world,
with little or no notice from most Americans; they
have been ignored during celebrations, forgotten
during holidays. They have spent weeks, months,
and years under rigid discipline and harsh
conditions, often far from their families and
loved ones. They had no say in their fate - they
went where they were told to go and did what they
were told to do by their civilian leaders in the
White House and in Congress.

In times of conflict, they have endured the most
horrible and violent reality a human being can
face - yet have still accomplished their missions
with an incredible amount of courage and skill.
A vast number of these have been young people in
(or barely out of) their teens who were shoved into
a brutal world of death and destruction. Many have
been wounded physically and/or emotionally; some
were captured, beaten, tortured... and some have
paid for their service with their lives. Even during
peacekeeping missions they have lived under the
constant threat of injury or death.

Yet despite all this, despite the tremendous
hardships they have faced in the performance of
their duty, they have served our people and our
country with great distinction and honor. They have
consistently been the dependable safeguard of our
nation, our way of life, and our freedoms. They
have risked - and sometimes given - everything for
our sakes. To these brave men and women, both in
the past and those currently serving in our Armed

Forces, we should all stand up proudly and say

THANK YOU, VETERANS.

The return of the all priviliges General license would make the
oldtimers whole, as well a simplifying the license structure as the FCC
requires. The elimination of the Extra Class license would be logical
for simplification, but now another group would be mad for wasting their
time testing, and of course how would we know who to give the status 2
letter calls to?

> Still a lot of money.
> 73 George W3GEO

Thats probably an *average inflation* multiplication figure. Some things deflate while most inflate. I always figured multiplying the price by ten from the 50s when I was young. A Coke was a nickle then but .50 now. A car was $2500 then but $25000 now. But that doesn't always work. A transistor radio in the middle fifties went for a couple hundred dollars, but a couple of dollars now. A B&W TV was $500 then, but a similiar size color TV is $200 now. The last 2 examples were deflation. Computers are in deflation mode right now. Comparing the accurate dollar value of todays and yesterdays radios using a standard inflation formula may not be completely accurate. But I agree that today's radios are a much better value than in the past.

More often than not, I get *this year's* data CD's just for asking.
If one has the guts to walk into an electronics trade show, they'll do
quite nicely. I've done this a lot and if you're nice, polite,
curious and *persistent*, you can get good info, occasional freebies
and learn a hell of a lot. Technical reps love it when you talk to
them in specifics about a pet project, whether it's yours or theirs.

(The web, generally, has made it *much* easier to get info from the
manufacturers. Fill out forms on their website and you'll often get
CDs, mailings, sometimes even samples.)

OK, so why is the DSP chapter in the ARRL Handbook so *opaque*?
I don't hate math, but math education seems to hate me. Did lots of
math for my CS. Agree wholeheartedly that it's important. All but
failed miserably at it. (I worked like a dog just to get by.)

Lacking a "DSP for Dummies", it may forever be opaque to me. Pity,
not for lack of trying. This isn't a Luddite rant BTW. I like
advanced technology and want to see hams using some, rather than
trapping themselves with CW. And I am _second to none_ when it comes
to the desire to learn new things. (Hewlett-Packard has an excellent
tutorial on digital modulation on the web, and I feel like I'm the
only ham who's read it.)

But I do wish some of the CW proponents who tell me I am not trying
hard enough, would take a higher-math curriculum, or some other
specialty that is brutally difficult, and get no other help than "Try
harder and stop whining, #$#$!@##$#@!" Preferably math taught by some
of my professors, who had absolutely *no* clue on how to teach (a
problem with the math field in general.)

This is a DX newsgroup and I think most of us who have WORKED for it will
agree that 5BDXCC is NOT "cheesy wallpaper" and DOES take a lot of WORK.
Those who haven't tried it will never know what is involved in making it
on 80 meters (especially with a barefoot rig and a low dipole). It is an
accomplishment to be proud of.

I have quite a few, actually.

One night I sat for 2 hours listening to a weak signal on 40 CW which I couldn't quite pull out. He was working a lot of EU and a couple W6's. In a couple hours his signal came up and I was able to copy his call - CE0ZRC (Robinson Crusoe Island, Juan Fernandez group). I called and he came back to me! Just as I finished my QSO, someone else spotted him on packetcluster. Then all hell broke loose - I probably wouldn't have made it through that pileup. But I lucked out and had him! (He was a fast QSLer too.)

Another time I heard TL8NG calling CQ on 40. I called and got no answer. So I thought if I called CQ, maybe he would answer me. It worked! - had a nice chat with Gene. I spotted him on packet and no one else showed up!

Another night 5U7M was calling CQ on 40 CW. I worked him and spotted him on packet. Another one that no one else bothered to come and work (or maybe everyone else was asleep?)

I was one of the last QSO's for both 3X0HNU and 7P8SR. I had a nice ragchew with each of those stations who told me it was his last night of operation. I remember them well.

Back when 3Y0PI was on, I waited patiently for several hours waiting for them to show on 40 again after a "30 minute QRX while we fill the generator" (there's a section in the 3Y0PI book about this incident - it took about 6 hours to dig out the generator). Then, at about 3 AM local time I tuned around the band a bit. Who is this calling CQ? ZY0SP? St Peter and Paul's Rocks? Got him first call with no pileup. Shortly after that they blew their generator and had to run QRP off batteries. Another

lucky break!

I've had a lot of these. Even recently with the DL guest operator at SV2ASP/A. I thought once I'd never work that one! These little incidents are what make it so much fun!

There are so many facets to this hobby that it is difficult to be involved in everything (yet I try!). I'm a DXer approaching the 300 mark in country total. I'm a contester who likes to crank out the QSO's. I'm a VHF/UHF/microwave nut who has equipment (ALL homebrew) for all bands from 50 MHz through 10368 MHz. I'm a homebrewer who will attempt anything. While CW is my favorite mode, I am active on almost all modes. (Every year I make a New Year's resolution to get on ATV, but I haven't made it yet.) I'm a ragchewer who likes to have a few 1-hour QSO's now and then. Mix this in with an engineering job that has been demanding 60+ hours a week lately, and try to fit my "other hobby" (photography) into all this. Sleep? Who needs sleep?!

Lisa, it is most definitely an appropriate post and an important message and most eloquently written.

My uncle, now passed on, served in the US Army Air Force in China-Burma-India in WWII under the worst conditions imaginable. He went on to earn his degree in history under the GI Bill and worked in the law office of the Capitol Building for over 30 years-- again serving his country well. He would be most pleased with your commemoration.

It is also appropriate to remember the YL's who served, my Mother-in-law was a US Navy Nurse during WWII, she vividly remembers the wounded boys returning from war.

Thanks for the timely post. I too, salute our Veterans.

I've been curious about this too. Dave used to advertise his logging
software quite a bit. He used to show up on these newsgroups now and
then. He used to go on DXpeditions. I haven't seen any of the above lately.

If anyone has any info, please post it here.

:> skills, no matter how easy.

Show me what's outdated and irrelevant about tradition ? Ham radio communications, in fact, all wire and wireless communmications, began with Morse Code. What's so irrelevant about learning it ? I do believe that a 12 WPM proficiency test is the only cw test anyone should make anyone else take, and only because it's an ITU requirement. Not just the arrl, but the whole world. I also believe that every ham should build at least one functional cw transceiver in his ham career, maybe before he gets signed off to take the test to upgrade.

: Note that the very hams who want to force "outdated and irrelevant skills"
: on all HF amateurs are the very ones who object to the learning of up-to-date
: and relevant skills. Why am I not surprised?

Outdated and irrelevant are still in use. There are tubes in use in Linear Amplifiers, so you should know them. There are transistors that are used in modern rigs, so you should know them. There are RF safety factors involved, you should know them. BTw, do you want to use data on the air ? How about explaining the Kiss protocol, ax25, tcpip, and the functions of a tnc before testing ? Wait a minute, how about the declination of an orbiting platform ? What is the optimum circumference of a radiator made for a certain band out of aluminum ? Believe me, you should know about discrimination in an FM transceiver. YEah, these old guys, they make it really tough on you.

Under good authority (Dave, himself), he has taken himself out of the logging software business for several reasons. One, his business was getting, wellll, busy, and he had less time to spend on the various upgrades. 2, the collapse of DOS based systems. Many, in fact, almost all users were looking for a windows based program and Dave determined that the returns (time and money) to convert everything to a program that he felt would be the best, didn't warrant it. The competition for such a small marketplace must be intense. Finally, he felt he needed the time with his family.

He stopped advertising and going to Dayton this year as the costs associated were not being covered by the sale of programs

I ultimately switched to DX4WIN. An excellent program but had a problem as the import function for WJ2O didn't work and had to massage the files into place. It took time, but it is up and running very nicely

Hello George,

I partly agree, and partly disagree. The idea was good, but the implementation
wasn't.
>
> Sometime in the early 1950s, someone proposed that everyone who held a
> General or higher license be granted all amateur operating priviliges.

Actually, it's a lot more complex than that. From the early '30s until 1951,
there were effectively two classes of ham license - Class A, which became
Advanced, and Classes B&C, which became General and Conditional,
respectively. All required 13 wpm code, but the Class A had a much tougher
written test, required 1 year of experience, and the test could only be taken
at an FCC examining point - and you got no credit for exam elements taken by
mail. The reward for a Class A license was the ability to use voice on 20 and
75 meters - Class B and C hams' voice privileges were restricted to 160, 11,
and 10 meters on HF, and VHF/UHF. There were no 30, 17, 15 or 12 meter bands
then, and 40 had no phone segment.

In 1951, the FCC made some major changes. The Novice, Technician, and Extra
Class licenses were introduced, the A, B and C licenses renamed, and the FCC

announced that the Advanced would be phased out and that an Extra would be needed to have access to all amateur privileges.

> It
> was about that time when the Novice and Technician class licenses came
> into being. The Novice was good for one year and not renewable. It was
> either up or out after that year. The Technician was designed for
> technical experimenters and was limited to operating priviliges, I think
> from 220 Mhz and up, with 50 and 145 Mhz being added later.

Agreed. The Novice was meant as a sort of learner's permit, and you had only one shot at it per lifetime - you couldn't get another Novice, even if you took the test again.

> In order to
> get the Technician, you had to pass a mail order written test which was
> the same as the General, and a 5 WPM code test if you were not a Novice
> and already had credit for it.

Novice and Tech were given at both FCC offices and by mail until 1954. You had to live 125 miles from an FCC quarterly examining point to take an exam by mail. In mid-1954 the Novice and Tech became mail-only, and the Conditional distance shrank to 75 miles.

> I think that a Novice and Technician
> license could be held jointly by the same person if the Novice time limit
> had not yet expired.

Absolutely. The holder had two callsigns, and which one you used depended on the band. The same person would be WN3XXX on 80 CW and WA3XXX on 6 meter phone.

>
> In effect, the General class was the top of the line license as far as
> operating priviliges were concerned. After 1952, testing for the Class A
> (Advanced) license was dropped, although existing Class A holders could
> continue to renew as Class A.
> No additional priviliges were granted to Class A operators.

Nor to Extras.

What happened was that after years of announcing that the Extra was going to be the top license, the FCC did a quick about-face and did exactly the reverse, giving all privileges to Generals and above. There were about 40,000 Advanceds and Extras at the time who saw Generals/Conditionals get the same privileges they had taken much tougher tests to get.

>
> This was the way of the ham radio world for 14 years.

1953 to 1968, I think. I can look up the exact dates. Actually a very short time, historically.
>
> In the late 50s, some deep thinkers somewhere decided that hams were not

> time on phone. The appliance operator label was just coming into vogue,
> and it was thought that valuable design and building skills were being
> lost.

The concern came from the FCC, who had started the whole trouble to begin
with.

>This debate raged in the pages of QST for over 5 years.

1963 to 1968. Some wag coined the phrase "invective licensing", which was
pretty accurate.
>
> The final result was that on a specific date in 1968, anyone who was a
> licensed General class operator lost a good amount of their operating

> became the new top of the heap and if you wanted your priviliges back, you
> had better pass the Extra exams with its 20WPM code requirement.

It was a little more involved in how this came about. The FCC expressed
concern about the situation in the late '50s and early '60s. The ARRL
responded in 1963 with a simple proposal (RM-299) - go back to the old
system, where an Advanced would be needed for 20 and 75 phone. No complex
mess of subbands, just bring back the old system. The FCC asked for comment,
and got a pile of them. No less than 10 got RM numbers. From these came the
idea of subbands, and three layers of HF privileges beyond Novice. It also
produced some other ideas like replacing the Advanced with a new "Amateur
First Class" that would require 16 wpm code and a tough written exam,
existing Advanceds being demoted to General, and a two-tiered phase-in that
would reduce the Generals' HF privileges by almost half - phone and CW. The
last three were fortunately defeated by protests from the ARRL and others.
You should see the FCC's proposal of 1966 - it makes what actually came to be
look mild.

>
> INHO the largest problems with Incentive Licensing were:
>

This caused tremendous resentment of both the ARRL and the FCC.

> operators anyway.

The development of amateur SSB transceivers and grounded-grid linear amplifiers meant that a ham could buy a legal limit sideband station for about as much money as building a 250 watt AM station from new parts. And it took up a lot less space. When companies like Heathkit offered rigs like the SB-100 for about $400 (as a kit, but with power supply), the future was clear.

Some of us, however, did not turn into appliance operators.
>
> 3.- It caused a meltdown in the interest of ham radio in the years
> immediatly after 1968. Take a look at the size of the Cq, and QST
> magazines of that period.

In some circles, yes. I was first licensed in 1967, and didn't understand what all the fuss was about. I thought,"So you get your code speed up a little bit and study for a written test. What's the big deal?" But many others felt their "rights" had been violated.
>
> 4.- It was one of many reasons why American ham equipment manufacturers
> started to go out of business.

Possibly. There were a lot of other reasons, many of them simple economics.
>
> I will always believe that Incentive Licensing amounted to a power and

> contempt. I was a memeber of a ham radio club in the late sixties which
> had a sign saying "ARRL's definition of a real ham...Extra Class
> License... 2 letter call" It took a long time for me to get over it.

The FCC, not the ARRL, was the instigator of the whole thing. I sometimes wonder if "Sputnik fever" had something to do with it - after Sputnik went up, and the Russkies started winning the space race, there was a lot more interest paid to science and technology.

The ARRL concern, as I see it, was that ham radio was on the road to becoming a strictly hobby service, full of folks with little technical knowledge and few operating skills who used store-bought equipment that they didn't really understand. They were afraid that such a service would not be able to justify its spectrum allocations, or even its existence, for very long. They were trying to reverse trends they thought were not in the best interest of ham radio.

There was also the fact that the FCC was going to do something, no matter what. So the League leadership had to do something that the FCC would accept - they thought if they just said no to the whole thing, the FCC would come up with something much worse. Look at the 1966 FCC proposal, and think what ham radio would have been like if it had been fully implemented.

Support for incentive licensing was split almost right down the middle, with a very slight majority in favor of it, by most reliable polls. The trouble was that the opposition was very bitterly against it. The bad feelings echo to this very day, 30 years later.

>
> It is interesting to note that the ARRL is doing everything it can to make
> sure that no one looses operating priviliges with the coming license
> restructure. I think this stems from bitter past experience.

I agree 100% on that point.

BTW, incentive licensing went into effect November 22, 1968, almost 30 years ago exactly. The second phase, set for a year later, was never put into effect by the FCC.

You bet. One of the most startling things I've done is work a
station on 70 cm SSB using what can only be termed "lightning
bounce". A strong electrical storm was occurring between us,
and our signals would jump to intelligible levels with each lightning
flash (AGC OFF). Really exotic, and sort of stupid. :-)

>letter calls to?

Simple:
The FCC mandates all U.S. amateur licenses to expire at
11:59 p.m., UTC, December 31, 1999.

The FCC mandates all current amateur radio licensees must
re-test prior to that date and time in order to be licensed
at the level of examination for which they pass all the
required components. Prior license level irrelevant and be
damned; no "grandfathering," no "good ol' boy" actions
permitted.

A 90-day grace period, beginning 0:00 a.m., UTC, January 1,
2000, will allow "last-minute exam-takers" to continue
operating while their examination results and applications
are processed.

Those current licensees who do not re-test, or who the FCC
says are not yet certified as licensed by the end of the
90-day grace period, must cease operating until such time
that they re-test and are officially certified by the FCC as
licensed.

Piece of cake.

Everybody wins: Equal opportunity testing; trying out the
new licensing standards (whatever they come to be); more
stuff for the VECs, ARRL, Fred, et al, to do.

Now *everybody* can whine ... ;0)

I.I.A. (Italian Islands Award)

1998 I.I.A. TROPHY

Dear OM/SWL,

in the last weeks we are receiving the logs from the "1998 I.I.A. TROPHY"
participants.
If you wish to participate, send us the log of your QSO/HRD with italian
islands between June 1st and September 30th. You can also send the log by
the internet to: crazy@grisnet.it
73 and thank you very much for your participation.
Rules are the following:

I.I.A. Italian Islands Award

-- IIA TROPHY - 1998 --

(Rules for NOT ITALIAN participants only)

This Trophy is issued by the Crazy DX Group.
All OMs and SWLs (world-wide) can participate.
The aim is to contact/hear/activate the largest number of different
Italian islands.
Only islands with references from the official IIA list will be valid.
References released after the Trophy's start date are also valid.
Participation is free of charge.
Good hunting !

PARTICIPATION PERIOD

From June 1st to September 30th 1998.

BANDS

Every qso/listening/activity on every amateur radio band will be valid.

POINTS

Each different Italian island contacted/heard/activated will count 1
point.

CATEGORIES AND PRIZES

There are 5 categories: OMs (outside of Italy), SWLs (outside of Italy),
DX-PEDITIONERS, italian OMs, italian SWLs.
You may participate in more than 1 category. Points for different
categories cannot be mixed.

In the DX-PEDITIONERS category, the participant must be the holder of
the callsign used in every activity.
A plaque will be awarded to the top scoring participant in each category,
and a certificate to the second and third.
If you want to receive the booklet with the results by post, please send a
SASE together with your log.

LOGS

Complete logs with data of every qso/heard (callsign, date, UTC time,
band, mode, IIA reference, correspondent callsign for SWL category)
should be sent to the following address by November 30th 1998.

CRAZY DX GROUP - P.O. BOX 11 - 04011 APRILIA - ITALY
or by email: crazy@grisnet.it

For DX-PEDITIONERS category participants, it will be sufficient to send
the complete activities list (dates, callsigns used and IIA references).

Hello,

I will soon have my 5wpm Tech Plus and want to dabble into HF. I am searching for a build-it-yourself kit with 10M SSB/CW capability. I am looking for something inexpensive. Someone mentioned I should try a QRP

rig. Anyone have any recommendations to a guy starting out and wanting to save money?

Thanks,
Chris Dennis, KD5EIA

The Handbook chapter may be poorly written because the authors haven't the knack for distilling a subject down to its essentials in a small space. It requires a deep understanding of a subject to communicate it well. That's why I generally find physicists to be the best math teachers for engineers. They are trained to see the concrete physical links between phenomena and the math models used to model them. The math major often can't see beyond the manipulation of equations, and the engineer often doesn't have the necessary deep physical insights into the phenomena.

But even so, it is fairly rare to find someone who understands a subject deeply and is also competent to convey that understanding to others. People like Feynman who can vividly convey the connection between the reality and the model don't come along every day. And there is a related problem. First you have to understand the signal before you can understand how to process it. Many amateurs don't have that understanding, so naturally they become lost in an explanation of DSP.

But there are books which do a good job of explaining things in terms that the reader can grasp. As I usually do, let me recomend Stephen Wilson's _Digital Modulation and Coding_ as a starting point. He gives you the needed background to understand signaling theory and signal construction in an extremely lucid fashion. After you read Wilson, tackle _Modern Signals and Systems_ by Kwakernaak and Sivan. With Wilson as a lucid background, it will expand your view to include general analog signals. Now you'll be equipped to understand the sorts of digital and analog signals you're going to digitally process.

Then you can go on to actual DSP texts. One such text that I'd recomend is _Digital Signal Processing, A Practical Approach_ by Ifeachor and Jervis. If you hit this one cold, you'll be hopelessly

lost. But if you first develop the background provided by the two books I mentioned earlier, it will make sense to you. Only at this point should you tackle the manufacturer's DSP databooks. That'll teach you the mechanics of implementing the algorithms you'll have come to understand.

There is no DSP for Dummies, and there likely cannot be such a book for those who wish to develop DSP systems. It could only tell you how to *use* a system developed by someone else. Well, perhaps I'll retract that and point you to Oktay Alkin's _Digital Signal Processing, A Laboratory Approach Using PC-DSP."
It sort of falls into the DSP for Dummies category in that it tells you how to use an existing software tool. But without the background provided by the other books, you won't really understand *why* the things you're told how to do work.

>time in his columns, and the posted experiences of a few EE's seem to
>bear this out ("I'm a BSEE and I don't know how to fix my TV!", for
>example.)

Yeah. A newly minted EE is pretty much a blank slate, ready to have
the practical matters not covered in his education transferred to him
by experience. He has more than enough background to understand
his job, but he lacks the experience to know how to carry it out in the
most practical way.

The technician often has a wealth of practical experience, but doesn't
have the theoretical background to put it into context. He knows lots of
tricks for dealing with specific problems, but often doesn't know why they
work, or how to apply them to a novel context.

Ideally, what we want is something which blends the two, taking from the
EE the deep knowledge necessary to understand a new context, and taking
from the technician the tricks of the trade which can be applied to the
problem. We don't need the breadth of the EE's knowledge, but we do
need its depth in certain narrow areas. Fortunately, our curiosity as
amateurs can drive us to seek out the necessary depth in the areas of
specific interest to us without requiring us to undergo a full EE curriculum.
Experience we get the old fashioned way, by hands on experimentation.

Walt,
What I meant by "sour" is that the past couple of years with the solar cycle on the downside 40 meters was poor in propagation. Now, it has been improving with the increase in the solar cycle. That is why I have been looking for the DX Net on 40 meters.

ZCZC AE45
QST de W1AW
DX Bulletin 45 ARLD045
From ARRL Headquarters
Newington CT November 12, 1998
To all radio amateurs

SB DX ARL ARLD045
ARLD045 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, DXNL, 425DXnews, QRZ DX and Contest Corral from QST. Thanks to all.

MALAWI, 7Q. Les, 7Q7LA, is QRV using CW on all bands including the newer bands. QSL via G0IAS.

SINGAPORE, 9V. Special Event Station 9V8SEA is active from IOTA AS-019 until November 15 during the 26th South East Asia Net Convention. QSL via operator's instructions.

BOTSWANA, A2. Charlie, A22/W0YG, is QRV until November 15, although his length of stay here is unknown. QSL to home call.

PRATAS ISLAND, BV9. BQ9P is QRV on 160 to 10 meters, using CW, SSB and RTTY until November 19. QSL via KU9C.

ERITREA, E3. The Space A DX Group is QRV as E30GA and has been active on 12 and 10 meters around 1200z. Look for some 6 meter activity, as well as RTTY. A number of other E30 stations will be active until November 17. QSL E30GA via K4JDJ. QSL all others via home calls.

FRANCE, F. Look for Special Event Station TM8OA to be active until November 15 to commemorate the 80th anniversary of the Armistice. Activity is on all bands and modes. QSL via F6KVD.

VATICAN, HV. Francisco has been active from HV4NAC on 20, 15 and 10 meters using CW and SSB. QSL via IK0FVC.

MINAMI TORISHIMA, JD1. Ryoichi, JL1KFR, is currently active as JL1KFR/JD1 until November 25. He plans to operate in the Japan International DX Phone Contest on 20, 15 and 10 meters. Outside the contest, he will concentrate on CW and RTTY. QSL to home call.

OGASAWARA ISLANDS, JD1. Hiro, JD1BIA, will be QRV in the Japan International DX Phone Contest on all bands. QSL to home call.

POLAND, SP. Special Event Station SN0SUL will be active until November 15 on all bands, using CW, SSB and RTTY to celebrate the 80th Anniversary of the Regaining of Independence of Poland. QSL via SP5ZCC.

HONG KONG, VR2. Serge, F6BHK, is QRV as VR2LL, using CW on 20 and 10 meters. He hopes to use RTTY soon. QSL to home call.

ALBANIA, ZA. Mike, ZA1MH, is QRV until December 1. QSL via Z32KV.

THIS WEEKEND ON THE RADIO. The Worked All Europe RTTY Contest, Japan International DX Phone Contest, OK/OM DX Contest and the Peace Country Amateur Radio Club QRS Contest will certainly keep contesters busy this weekend. Please see November QST, page 97 for details.

A week or so ago I made a small post about my "DX Night to Remember"
which started this thread.... I hoped at that time that it might
precipitate some real DX discussion on this group. What a pleasant
surprise.

My thanks to all who have responded with their DX stories, and insight
into the joys of DX'ing.

He he! I'll send you a bottle of *real* Budweiser ... from the
original Budweiser brewery in the Czech Republic!

Actually, there are some nice "real ales" being brewed in the USA
nowadays ... especially in New England and around Seattle, WA. I had
the pleasure of sampling several of them at "The Great British Beer
Festival" in London last August. There was a particularly evil but
delicious "Black Chocolate Stout", from New York, weighing in at
around 9% a.b.v. Wow!!!

Sadly, Ruddles ale is a mere shadow of what it was in its heyday. The
once-independent Ruddles Brewery (founded in 1858) in Oakham, Rutland,
has been taken over three times since 1986 ... first by Grand
Metropolitan, then by Courage, and latterly by the Dutch "Grolsch"
brewer. They still brew Ruddles Best Bitter and Ruddles County ...
but it ain't what it used to be! :-(

Well, all I can say is that it has not been poor in propagation here.
In fact, at times of low solar activity, the lower frequency bands
(e.g. 3.5 MHz and 7 MHz) tend to *improve* as DX bands because of the
reduced amount of D-layer absorption and the presence of less short
skip to drown out the DX.

That is truely sad indeed. I spent 2 or 3 weeks at RAF Wyton at least 3 times a year for 3 years. After a mission (US Navy Recon) it was most pleasign to retire to the Ollie Cromwell or the Robin Hood for a good smooth Pint of Ruddles (this was 1979, 80, and 81). It made it all that much better. Pub Lunch with bangers and mash and a hay pint.

Keep up the Campaign and if you find the Recipe for Ruddles (Old style) send it to me. My friend and I are going to brew up a batch. (Gives you something to do when DX is down)

In the past 18 months, I was able to work 170 countries on 40 with a Force
12 C-4.months. Sour? Not in the Central US. 40 is more work than some of
the higher bands...but for me, quite rewarding. Give it a try!

Greetings,

In case you are unfamiliar with ABW ++, here is a brief description.

ABW ++ displays the currently active NCDXF beacon over a topographic
map, along with the solar terminator. Tools for setting the system
clock, via the net, are also provided.

ABW ++ will download and display up to five selected Space Environment
Center (SEC) solar reports and forecasts. In addition, ABW ++ provides
the comprehensive SEC glossary of solar terrestrial terms. This
glossary, along with report explanations, is provided in
windows-help-file format and may be useful when interpreting the
propagation reports and forecasts.

Screen captures and basic information along with the publicly download
able version, are available at:

Roger,

That's a very impressive result, but I bet very few of those countries were snagged in the Novice subband. If ever there was a "sour" band it is 7100-7150, mostly from broadcasters, including our own VOA, which I have heard broadcasting on 7105.

During my first stint as a Novice back in 1966 it was a lot nicer band.

Roger,

That's a very impressive result, but I bet very few of those countries were snagged in the Novice subband. If ever there was a "sour" band it is 7100-7150,
mostly from broadcasters, including our own VOA, which I have heard broadcasting
on 7105.

During my first stint as a Novice back in 1966 it was a lot nicer band.

I am looking for information on how to obtain a French Polynesian (FO) reciprocal license via mail.

The info on the ARRL website basically says to apply in person once in Papeete, Tahiti. But I am just stopping in Papeete only briefly before traveling to the outer islands. I was able to apply for and receive my FO recip via mail a number of years ago, on a previous visit.

If anyone can provide a current mailing address and procedures for applying for an FO reciprocal license, I would certainly appreciate it.

Thanks, Kevin

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & GO LIST, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4GN, WB4UBD, K5GN, KE9NA, DJ5AV & DX News Letter, DL3DXX, EA5XX, F6HIZ, FR5DX, G3XTT, G4BUE & DX News Sheet, GW0ANA, HA5PP, HB9CYN, IK2NCJ, JI3ERV, LU7EC, AH0W/OH2LVG, ON6TT, YZ1EW and ZS6RVG for the following DX information.

IMPORTANT NOTICE AND REMINDER! Remember when QSLing, the U.S. Postal Service will increase their rate effective January 1, 1999, from 32 to 33 cents. Some operations who are active now may not send their cards out until the first of the new year. Please do not short change U.S. QSL Managers by putting a 32 cent stamp on the return envelope.

4S7, SRI LANKA. Kamal, 4S7AB, a 25 year old electronics engineering undergraduate living in Colombo, is completeing his final year and during his leisure he likes to chase DX. He states that he is active on the HF bands and satellites. He has been found recently on 14190 kHz at 0215z and 14260 kHz around 1500z.

7Q, MALAWI. Les, 7Q7LA, has returned here and is active mainly on CW. His activity includes operations on the WARC bands. Check 24891 kHz around 1415z. QSL via G0IAS (direct only).

8Q, MALDIVES. Lee, G0ULN, reports that he will be here as 8Q7LE from December 22nd to Jaunary 13th. His activity will be only SSB, and he suggests to look for him on the usual IOTA frequencies. QSL via the bureau or direct to his CBA.

9M2, WEST MALAYSIA. "The 59(9) DXReport" states Dick, N4ISV, will QRT as 9M2RY in December and return to the USA. QSL via N4JR.

A3, TONGA (Help needed!). Paul, A35RK, is looking for some help. He needs someone to hand-carry a new rig and antenna parts to Tonga, and also carry broken radios back to the States for repair. If anyone is contemplating a trip to Tonga soon, and is willing to help, please contact Paul's QSL

Manager (Bob Preston, W7TSQ) at: w7tsq@aol.com
In exchange for this assistance, Paul will provide free room and board at his family's guesthouse for one week and the use of his radio station on Lifuka Island (IOTA OC-169).

A5, BHUTAN. Last week we forgot to mention in Jim Smith's (VK9NS) announcement that HIDXA has returned all the A5 donations due to his postponed trip, that was mainly due to the bad weather and storm damage on Norfolk Island.

AH2, GUAM. The members of Guam Contest Club will once again be active from here during the upcoming CQWW CW Contest. The club built an Oceanic record in the Multi-Single category in last year's CQ World Wide DX Contest (CW) and plans to participate in the same category to increase their score. Operators Toshi/JR7OMD/WI3O, Hiro/JH0USD and Sassy/JR0BQD will use the callsign AH2R during the contest. Guam Island (KH2) is on Zone 27 and has an IOTA of OC-026. They report that the Sunrise/Sunset is: 2026/0751z. QSL via JI3ERV (Do NOT send to KH2 Bureau).

BQ9P, PRATAS. Active now on all bands until November 19th. QSL via KU9C.

CORRECTION TO OPDX.380. Herik, FR5DX, states under the TO150 DXPEDITION: "Le Piton des Neiges" is not an island off of REUNION, but the highest summit of the REUNION island culminating at 3069 meters over the Indian Ocean.

E30HA WRAP UP! Zoli, HA5PP, informed OPDX this past weekend that he has just returned from E3 land and states that he would like to go back as soon as possible (with a better rig). Zoli reports he made a total of 13,000 QSOs (3000 USA QSOs) and 8300 on 10 meters. He is interested and looking for some to help in printing his E30HA's QSLs.

EA6, BALEARIC ISLAND. The following operators will be active as EA6IB from Ibiza Island during CQWW CW Contest: EA3AIR/Julio, EA3AJW/Jaume, EA3ALV/Xavier, EA3DU/Sergio, EA3GJO/Jesus, EA3KU/Fernando, EA5BM/Joan and EA6ACC/Josep. The group will also be supported by the EA6IB team (Seccion Local de URE Ibiza). The QSL route for this contest is: Fernando Martinez, P.BOX 69, L'Ametlla de Mar 43860, Tarragona, Spain.

EP, IRAN. The "DX News Sheet" reports that Mohammed, EP3PTT, is often active between 1100 and 1400z, SSB, on 21265 kHz. OPDX has found that he has also been heard on 14195 kHz at 1315z. QSL direct.

FT5W, CROZET ISLAND. "The Daily DX" reports that Gilles, F5AGL, will be a member of the 1998/1999 mission here starting around December, 1998, or January, 1999. Reports indicate that he should be active on the air as FT6WH. QSL via F6KDF.

GU6, GUERNSEY. Don, G3XTT, (life member of the Cambridge University Wireless Society, G6UW) reports that he plans to be a Single-Op/All-band entry in CQWW CW Contest from the Guernsey Amateur Radio Society station signing GU6UW. He does not anticipate any activity outside the contest other than a minimal amount of testing. QSL to his home call, direct or

via RSGB bureau: Don Field, G3XTT, 105 Shiplake Bottom, Peppard Common, Henley on Thames, RG9 5HJ, England.

HS, THAILAND. The "DX News Sheet" reports that the Thai PTD are again allowing stations to be active on 160 and 80 meters in the CQWW CW Contest. Due to antenna limitations, only HS7AS, HS0AC and E22AAA are expected to be active on those bands. QSL HS7AS and HS0AC direct and E22AAA via HS1CHB.

JT1, MONGOLIA. Details from a press release by Tim, N4GN, reports that the "South China Sea DX Team" (SCSDXT) has departed from the shorelines of the South China Sea and is crossing the snow and ice to reach Ulanbaatar, Mongolia, and make CQ Zone 23 available in the CQWW CW Contest. An agreement has been signed with MRSF, the Mongolian IARU Society, to team up with their folks in downtown Ulanbaatar to put JT1A into the Multi-Single category. The travelling operators are OH1RX, OH2BE, OH2BH and OH8PF, and they are bringing Yaesu FT1000MP and Alpha firepower with them. This visiting team will arrive on November 26th and close down on Tuesday morning, December 1st, to take their flight back to Beijing, China. QSL this JT1A operation via Jouko Hayrynen, OH1RX, callbook address.

KH7, HAWAII. The "DX News Letter" reports that Chad, WE9V, will operate as KH7R in the CQWW DX CW Contest. He will be on the air as KH6/WE9V from Ken's (KH7R) QTH especially on the lowbands between November 18th and December 3rd. QSL via WE9V.

QSL INFO AND NEWS.....
The log server is now working for the E30GA operation. Try the WEB page: http://no4j.com/nfdxa/logs/e30ga.htm

4N9BQ was Laci, YU7BW, on St. Nikola Island (Yugoslavia, IOTA EU-163). QSL via YU7BW.

Mike, KH0AS, has a new QSL Manager. Jim, WB4UBD, will handle the task. For those who have not received your cards yet, Jim states, "Please be patient and do not resend at this time. I have logs in hand and expect to have the backlog in the mail by mid-November. Just a reminder - if you have submitted cards to Mike 'via bureau', he probably never received them. There is no Incoming Bureau for KH0 and ARRL policy (per their web site) is that they 'no longer hold cards for countries with no Incoming Bureau'." Jim also mentions that Mike has capability for all modes and hopes to be particularly active on RTTY as family life and work permit. QSL to WB4UBD at CBA.

QSLs for LU7EC should be sent to: "Luc" Sarmiento, S/N C.P. 2703, Carabelas, Argentina (or via the bureau).

The Logs for S92YN and S92YV (October 26th through November 7th, 1998) are now available at: http://ab5eh-lin.tamucc.edu/~hb9cyn/Searchlog.html

TJ2RSF QSL route. The QSL route for the TJ2RSF DXpedition is via EA4URE (official callsign from URE H.Q.). The URE is the Spanish

Radiomateurs Association and has two addresses:
URE, Avda. Monte Igueldo 102, Madrid 28017, Spain
-and-
URE, P.O. Box 220, Madrid 28080, Spain
You can also send your card via the bureau.

The two day operation from China Guangzhou (Zone 24) by Hannes/DL3NEO on October 31st and November 1st, using the callsigns DL3NEO/BY7KH and DL3NEO/BY7KF, should only be QSLed via DL3NEO. The Bureau is preferred or send direct to: Hannes Schmidt, Komotauer Str. 28 B, D-91207 Lauf, Germany.

Germano/TG9IGI has a new QSL Manager. Cards can be sent to I2MQP direct or via the Italian bureau. It has also been reported that Germano is preparing his station for RTTY activity.

SPECIAL EVENT. Glyn, GW0ANA, along with fellow members of the Barry Amateur Radio Society will be recreating the first ever "Marine Distress Signal" ever sent by radio on December 19th. The group will be on board the East Goodwin Lightship in the middle of the English Channel 12 miles off the Kent coast from Dover. They will re-create the first ever "Distress Call" sent out 100 years ago by the Lightship East Goodwin in 1898 after she was rammed in fog by the SS Mathews. Using a Marconi Spark gap transmitter that Marconi had only just sold to Trinity House, the first ever ship's radio operator sent out "CQD" because of this radio distress signal. The ship's company was saved from drowning on the Goodwin Sands. The callsign they will use at this historic recreation is GB100EGL, where the suffix stands for the East Goodwin Lightship. This callsign will only be active on December 19th. However, the Society will also be active at the South Foreland Lighthouse for a longer time. This is the other end of the link from East Goodwin Lightship. The callsign from the South Foreland Lighthouse is GB100SFL and it will be active from December 18th to the 27th. QSLs for GB100SFL and GB100EGL go to GW0ANA. These cards will be very special because they will represent the first time human life was saved by radio, and proved beyond a shadow of doubt that commercial radio was possible.

SPECIAL EVENT. In celebration of the 75th anniversary of the first transatlantic radio connection by W1MO and F8AB, the French Telecommunication Authority has agreed to let certain French operators use the callsign F8AB for the night of November 25th to November 26th. The historical event took place on the night of November 26, 1923, around 0200z, between F.H. Schnell, W1MO, Hartford, Conn. USA and L. Deloy, F8AB, in Nice, France. In order to celebrate this anniversary, F8AB will be active from the Nice area starting 2000z on November 25th and will be operating until 0800z on the November 26th, on the following frequencies:
SSB - 18140, 14240, 7070 and 3770 kHz
CW - 1835, 3525, 7015 and 14035 kHz
Special attention will be paid to North America, but ALL callsigns will be answered! The F8AB callsign will also be used by the Bordeaux DX group for the CQWW CW Contest. A special QSL will be printed by the

Clipperton DX Club. QSL Manager is F2VX. QSL via Bureau or direct.

VP5, TURKS CAICOS ISLANDS. Dave, K5GN, and XYL will visit VP5JM on Provo arriving November 24th and departing December 1st. They will be active on all bands as VP5/K5GN. Dave states that he may be able to do some activity on the WARC bands as well on request. He will operate on all bands in the CQWW CW Contest as VP5GN. QSL to K5GN.

WELL KNOWN DXER HEADS TO HONDURAS. Peter, ON6TT/5X1T was informed Friday, November 13th by his HQ that he will be leaving for Rome, Sunday morning to prepare a UN telecoms team leaving later next week for Honduras. Peter states that he will be in Honduras and neigbouring countries for a month, setting up the telecom team and getting things organized. He is currectly looking for telnrs/addresses of active hams in Honduras, Guatemala and Nicaragua (preferably in the capitals). If you can help, reply to: peter.casier@wfp.org
Peter reports, "Apparently the hurricane did quite some damage, so food is needed badly. Our UN organization is the one bringing in the food, transporting and distributing it. But without decent telecoms, it will be difficult. And there is not much telecom left."

XX9, MACAU (ZONE 24). Another SCSDXT member will be providing another multiplier in the upcoming CQWW CW Contest. Look for Pertti, OH2PM, to activate the famous XX9X station on all bands as a single operator during the contest. Look for warm-up activity from XX9 starting the weekend of November 21-22nd, as OH2BH helps Pertti line up the beams, tweak the amplifiers and prepare for the CQWW race. QSL this XX9X operation via Pertti Simovaara, OH2PM, callbook address.

XU, CAMBODIA. A multi-national team of DXpeditioners will conduct a special events DXpedition from the ancient temple city of Angkor Wat in the Siem Reap province of Cambodia, November 26th through December 4th. The DXpedition will operate CW, SSB and RTTY on all bands from 160 through 6 meters. A special callsign, XU1A, has been issued to the team. The team, which represents Japan, the USA, Finland, Sweden and Hong Kong, is headed up by Yasuo "Zorro" Miyazawa JH1AJT and includes Kimo Chun KH7U, Kazuhiko Fujita VR2KF, Hitoshi "Jin" Fujiwara JF1IST, Jan Hallenberg SM0DJZ, Masayuki Nakatani VR2MM, Erik Sjolund SM0AGD and Frank Smith AH0W/OH2LVG. They will be operating from within the shadows of Angkor Wat's majestic Bhuddist and Vishnu temples; some built well over 1000 years ago. The DXpedition will take place in conjunction with the Angkor Wat International Half Marathon. It involves several Olympic medalists, and is all in an effort to raise donations to assist Cambodia's victims of landmine accidents. The marathon and the DXpedition itself will be featured on Japanese television. In the noble spirit of promoting international friendship and goodwill through amateur radio, hams worldwide are invited to participate in this international humanitarian effort with their donations, large and small. Any such contributions received in support of this effort will be forwarded immediately to Cambodia for this purpose. Contributions maybe forwarded via JH1AJT. In the meanwhile, if DXers would wish to forward suggestions in regards to propagation (openings,

times, bands) prior to the operation, please do so via the Midway-Kure DX Foundation: mkdxf@aztec.asu.edu -- QSL the XU1A DXpedition via JH1AJT.

XZ, MYANMAR. The Central Arizona DX Association and members of the XZ1N team continue to be busy assembling nearly a ton of equipment to return to "The Golden Land". They will operate from Yangon, Myanmar. Their activity from the Asian Zone 26 will take place between November 21st through December 6th, on 160-10 meters and all modes. QSL via W1XT. The XZ1N WEB site can be found at: http://ng7m.qrq.com/~xz1n

Z21, ZIMBABWE. Dick/ZS6CAL and Dave/ZS6RVG intend to operate as Z21/ZS6PDX from December 17th to December 20th. They will operate mainly SSTV and RTTY on the 10, 15 and 20 meters bands. QSL via ZS6RVG. Dave requests that if there are any direct QSLs, to PLEASE send them only in the new year to avoid the Christmas postal QRM. All cards not answered direct by the first of March, 1999, will be sent to the ZS bureau.

ZP5, PARAGUAY. Jon, KE9NA, states that he has finalized his trip here and will be operational as ZP5/KE9NA from November 18th through November 22nd. Acitivity will mainly be SSB on 15 meters and 10 meters during the evening hours. QSL to home call direct or via Bureau.

Do want some cheese to go with that whine? If you haven't noticed, CW can be copied through those broadcast stations. I have done quite a bit of DX on the Novice band.

From: kc8com@webtv.net
Message-ID: <21508-364FF05F-1@newsd-113.bryant.webtv.net>
Source record: 26859

Unless you've really got your heart set on building it yourself I'd recommend looking through the classifieds for a 10m mobile like an hr-2510, rci-2950, or ts-5010. These radio's are commonly modified for cb but they still work great on 10 metres and sell used for $100-150.

3810. Re: French Polynesia reciprocal license

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-16 00:00:00 UTC
From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <3650299B.20A7@acm.org>
Source record: 26862

According to a recent ARRL bulletin which I quoted below, it is now
quite simple:

* France simplifies reciprocal permit: France no longer requires a
temporary operating permit for visits of up to 90 days on French soil,
and there is no longer any charge. Formerly, applicants had to pay a fee
of 100-francs (around $18) and wait a few weeks for a license. Now, no
special notification is necessary. The only "catch" is that operators
are supposed to identify using both the required French prefix as well
as a /P suffix (eg, FP/W1AW/P), making for a cumbersome call
sign!--thanks to Gerard Valadier, N2BFL

Danny Weil attended the W5 DX BASH several times recently. I think the last time was in about 1995. He is living in San Antonio Texas now. His wife was in very poor health the last time that I saw him and he spent most of his time taking care of her.

Danny is unlicensed at this time. He had the VP2VB call which expired long ago and also had a KZ5 Canal Zone call. He was going to try to use the KZ5 call to secure a standard US call but was unsuccessful in this and the KZ5 call then expired.

He is still the expert watch and clock repairman. That was how he made a living on his trips. He walked thru the house at the ranch where we have the BASH and fixed two clocks almost by just touching them. They are still running.....

The old timers still around spent many many hours chasing Danny at all the dozens of places that he went on all his trips.....back in the old days.....

3830. Longwire antenna

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-18 00:00:00 UTC
From: Activity Island Ltd <activity@globalnet.co.uk>
Message-ID: <01be12eb$6c39e2a0$172893c3@default>
Source record: 26882

I have a long wire antenna approximately 10 metres long, attached via an ATU and ballun to a Yaesu FRG100 SW receiver.

The wire I have used is just thin, insulated, copper 'doorbell wire' from a DIY store and it terminates just inside my radio room window, where is spliced to the centre of a coax cable and fed through the ATU and ballun, to the receiver SO239 socket [the brading on the coax is earthed, as is the receiver].

I generally concentrate on monitoring the North Atlantic flight communications and my antenna is lined up pretty much due North/South.

Would I get better reception if I:

1. Used a different type of wire [different thickness/type of metal etc]

2. Extended the wire so that, instead of just running a straight 10 metres and ending, it carried on to the left [West] or right [East] before running back again [South]. I have a fairly wide garden so this could be done, but would it do anything for reception ???

Any advice greatly appreciated.....

Kevin Hughes

Source record: 26883

Kevin,

From your description, it sounds like there could be some improvement in the way the antenna is connected to the radio. Normally, the balun would go between the ATU and the antenna, but it sounds like your balun is between the radio and the ATU. Why are you using coax between the ATU and the antenna? Is there a terminal on the ATU for a longwire antenna?

For reception, I doubt you would notice any improvment in changing the type of wire, as long as this wire is strong enough to support itself, it should be okay. I don't think doubling the wire back on itself would help much, but putting an angle in it to go left or right might help, if you can add 5 or more meters of length. I suspect that the improvement in reception would be marginal, but if it's easy enough to do, it's worth trying.

Message-ID: <36539CBD.F95E465B@solder-it.com>
Source record: 26885
Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.space,rec.radio.amateur.policy,rec.radio.amateur.equipment

This is not an advertisement!

We have been running a contest at http://www.solder-it.com called QSLs on the web where digitized versions of QSL cards are posted each month for voting. The card getting the most votes every other month receives a free Deluxe Micro-Jet Torch.

You don't have to visit the site to take part and if you really dont want to see the other stuff at solder-it.com but want to view the cards, just go directly to http://www.solder-it.com/qsl.htm

Just send your QSL card (or any ham radio related picture) along with your permission to post it written on the back and your e-mail address to:

QSLs On The Web
Box 20100
Cleveland, OH 44120-0100

You can either view your QSL and vote, or when notified that it is posted, vote at: votes@solder-it.com. Of course you should get your friends to vote also. Only one vote per e-mail address permitted. We do not use your e-mail address for ANYTHING other than to notify you of posting and hopefully winning.

Thanks, good luck.

Fred, K8PP

I've worked Abubaker at 5A1A on several bands this year. He always says that QSLs are direct via a PO box in Tripoli, but recommends registered airmail. I wonder if anyone has had much success obtaining a QSL from him without sending the card via registered mail (which adds $4.85 to the postage cost in the USA)? Will I just be throwing the card away if I send it via standard airmail? Thanks for any info.

ZCZC AE46
QST de W1AW
DX Bulletin 46 ARLD046
From ARRL Headquarters
Newington CT November 19, 1998
To all radio amateurs

SB DX ARL ARLD046
ARLD046 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, VU2MB, QRZ DX, DXNL, The Daily DX and Contest Corral from QST. Thanks to all.

BARBADOS, 8P. John, K4BAI, will be active as 8P9HT on all bands with an emphasis on 160, 30, 17 and 12 meters from November 24 to December 1. An entry in the CQ World Wide Contest is also expected. QSL to home call.

GHANA, 9G. Members G3ZEM, G4ZVJ and G3VMW of the Voodoo Contest Group will be active as 9G5ZM, 9G5VJ and 9G5SW, respectively, until November 21, and again from December 1 to 6. QSL to home calls.

AMSTERDAM ISLAND, FT/Z. Eric and Mehdi are QRV now from Reunion Island as FR/F5SIH and FR/F5PFP, respectively. They will sign FT5ZH from Amsterdam, probably beginning November 24. QSL via operator's instructions.

NORTHERN MARIANA ISLANDS, KH0. Hirotada, JA0SC, is active as KH0/JA0SC until November 22. He plans to be mainly on SSTV, with some CW on 160 to 10 meters. QSL to home call.

COSTA RICA, TI. Several TE45 Special Event Stations are active on all bands and modes to celebrate the 45th anniversary of the Radio Club de Costa Rica. Operations will continue until December 6. QSL via TI0RC.

ANTIGUA, V2. David, G6QQ, will be active mainly on 20 to 10 meters CW as V2/G6QQ until December 2. QSL to home call.

INDIA, VU. The Amateur Radio Society Of India has requested that India amateurs use a special prefix to mark the Diamond Jubilee of Ham Radio in India. All radio amateurs in India can use AT2 and AT3

prefixes until December 31, 1998.

MACAO, XX9. XX9AS has been QRV on 20 meters around 1300z. This is just warm-up activity before the CQ World Wide Contest. QSL via OH2PM.

MYANMAR, XZ. Members of the Central Arizona DX Association, along with other amateurs, will be QRV as XZ1N from Yangon from November 21 to December 6. CW, SSB and RTTY operations on 160 to 10 meters, including the newer bands are expected. Entries in the CQ World Wide CW and ARRL 160 Meter contests are also expected. QSL via W1XT.

CAYMAN ISLANDS, ZF. Joe, W8GEX, will be active on 40 to 6 meters as ZF2/W8GEX from November 24 to 29. QSL to home call.

THIS WEEKEND ON THE RADIO. The ARRL November Phone Sweepstakes, North American Collegiate ARC Championship and the IARU Region 1 160-Meter Contest are all scheduled for this weekend. Please see October QST, page 118, and November QST, page 97, respectively, for details.

Gawd, I remember, at least in the late 70's the 40 and 15 meter novice band being packed wall-to-wall with morse code QSO's -- many of them at speeds below 3wpm. Then, this might have been the poor selectivity of my Heathkit receiver. Still, it sounds pretty dead in the novice bands lately.

3839. QSL Returns From CN8WW

Newsgroup: rec.radio.amateur.dx
Date: 1998-11-20 00:00:00 UTC
From: wb6wqa@juno.com
Message-ID: <734bbg$13c$1@nnrp1.dejanews.com>
Source record: 26891

Just a note to let you know, that if you worked CN8WW in the CQWW phone contest, and you sent a QSL card to DL6FBL (who operates as CN8WW while in Morocco), you will get your own QSL card back signed by Bernd Och, DL6FBL. The signature on your QSL card confirms that the info on your QSL card is accurate, and confirms the contact.

A note enclosed in the return envelope explains that, after the CW portion of the CQWW contest on November 28-29, he is sending out color QSL cards via the bureau, and that one must wait until at least January to receive the Morocco QSL card (that assumes that he will only send out a QSL via the bureau even if you QSL'd direct). And, if you QSL'd him directly, as I did, you perhaps you used a either a "green stamp" or IRC's.

Point here is, had I known I would be getting my own card back instead of a card from CN8WW via direct mail, I would have saved the green stamp and instead would have just gone via the QSL bureau(s) or, if that route was not a good route, then waited until February 1999 to QSL direct to Och. I use the incoming QSL bureau, but I don't know that everyone does. I guess if you want to get your CN8WW QSL, you better get an envelope in to the incoming QSL bureau.

Again, just a reminder.

73, Tim Watkins

Hi,

I'm just getting into ham radio and working on the code and, in addition to the W1AW slow code broadcasts I'd like to try to copy some real (if sometimes sloppy) slow code. Nearly everything I find is still a little too fast. I realize the need to push myself but I'd like to find something copyable.

Are all the novice bands pretty much the same or does anybody know of any particularly slower band ?

Hi Eric -- this a great place to pose such a question
Here is the USA 10M Band Plan:
10 Meter Band Plan

Frequency Usage
29.50 Simplex
29.52 - 29.58 FM Repeater Inputs
29.60 FM Remote Base
29.62 - 29.68 FM Repeater Outputs
20 khz channel spacing, input low, 100 khz offset

This is from SHARKK at URL:
http://www.sharkk.com/ncalplan.htm#10 Meter

For Europe see URL:
http://www.sral.fi/ripelit.htm#ar02

It Shows as an example:
OH1RHU 29,680 MHz Turku KP10DL

The receive frequency of 10 m repeaters is 100 kHz below the transmit
frequency.

Hope this helps.

REALTIME DX SPOTS FROM DX Summit!

Get the DX spots before everybody else! Courtesy of DX Summit, the Undernet IRC #cqdx channel has a direct live feed of all DX spots from DX Summit. You don't have to wait 2 minutes for the web page to reload, the spots appear on the channel as soon as they arrive at DX Summit just as if you were connected to a packet cluster. WWV reports and announcements are also sent in realtime. In addition to broadcasting spots, you can also interactively send commands to request data and send spots just like on a packetcluster.

The IRC #CQDX channel is also a great resource for DXers and can provide shared information such as:

Who's on the band
Help identify pileups
Latest information from DXpeditions
DX spotting
Propagation reports
Arrange and coordinate schedules
Obtain QSL information
Track pileup listening frequencies
Coordinated band opening checks
Discuss and get help with DXing software

Please visit http://members.home.com/dab/dxchat.html for more information on the Undernet IRC #CQDX Chat Channel for DXers.

3850. Kulpsville

Newsgroup: rec.radio.amateur.dx

Does anybody have the official dates of the Kulpsville shortwave gathering yet ? It's in March I believe.

I live disgustingly close so I will probably attend.

Don

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 384
BID: $OPDX.384
November 23, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & GO LIST, N2JTX, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, KN4T, N4TO, WA5J, WC5P, K7CO, N9NC, WE9V, 4L5O, BA1DU, BA4TB, DF6EX, DJ5AV & DX News Letter, DU9RG, F6AJA & LNDX, G4BUE & DX News Sheet, HS0/G3NOM, OZ8AE, PS7AB, UA9CDC, UA0SJ, UN5PR, VE2NW, VE3XAP, VK4AAR and VU2DPI for the following DX information.

3A, MONACO. Tom, HA/N9NC, will operate SOAB in the CQWW CW Contest. The operation is planned to begin November 25th or 26th, closing immediately after the contest on December 1st. There will be some station testing activity on SSB and CW that will take place on 160-10 meters before the contest. Please QSL to OM2SA, Juraj Sipos, 930 13 Trhova Hradska 550, okr. Dunajska Streda, Slovakia. Please DO NOT QSL to N9NC's call book address. Questions/comments may be sent to: n9nc@westel900.net

3DA, SWAZILAND. The "DX News Sheet" reports that Jon, 3DA0CA is active on Fridays and Saturdays at 1900z on 1827 kHz for Europe. QSL via W4DR.

4L,GEORGIA. Omari, 4L5O, states that he will be active in the CQWW CW Contest as a low power Single OP/Single Band entry. Look for him on 3.5 MHz band. QSL ONLY via CBA. If anybody is interested in a contact with Omari, send a E-mail message to: 4l5o@caucasus.net

5V, TOGO. Remember to look for the Voodoo Contest Group to be active from here. Members G3ZEM, G4ZVJ and G3VMW plan to be active as 5V7ZM, 5V7VJ and 5V7SW. During the CQWW CW Contest they will use the callsign 5V7A. QSLs via homecalls. For more info, please refer to OPDX.273. The group will return to Ghana (9G) after the contest (December 1-6th).

6Y, JAMAICA. JT, K7CO will be active as K7CO/6Y5 now until December 1st. Activity will be on SSB only on 160-10 meters (including the WARC bands). Suggested frequencies are: 1872, 3872, 7272, 14172, 14272, 21272, 28472 and 50172 kHz (WARC freq. were not specified). E-mail can be sent to

him at: 6y5@vcr.com Also, a Web site is available for online logs and news at: http://www.vcr.com/6y5

8Q, MALDIVES. Igor, UA9CDC, reports that he and 5 other UA9 operators (UA9CDV, UA9CI, UA9CLB, UA9CKP and UA9CFF) are teaming up and are going to be active as 8Q7DV from Sun Island. Activity should have already started and will last until December 3rd. Operations will be on all bands plus an entry as a Multi/Single in the CQWW CW Contest. QSL via UA9CI.

9M8, EAST MALAYSIA. Hans, DF5UG, is attempting to operate from Pulau Satang (IOTA OC-165) Island off the coast of Kuching, Sarawak, as 9M8QQ. There are difficulties with permissions and access, so the operation is not certain. However, Hans is visiting the region and he will be trying to overcome these difficulties. If successful, he will aim to operate for two nights, November 24th and 25th.
Meanwhile, look for Japanese operators JH3GAH, JR3WXA and JE5FLM to be active as 9M8TG. Their activity will be mostly on 12, 17, 30, 80, 160 meters and RTTY before the CQWW CW Contest. Look for them during the contest as 9M8YY using 15 meters only. QSL via JH3GAH.

A2, BOTSWANA. Charlie, W0YG, is now signing A25/W0YG. He will continue to operate until about December 2nd. Activity will be on 40-10 meters. QSL A25/W0YG via home call.

AT, INDIA. Dilip, VU2DPI, reports that the Government of India announced that, up to December 31st, all the Indian Hams can use the "AT" prefix instead of the usual VU prefix. The special prefix can be used by all the Hams of India to commomorate the 75 years of Amateur Radio in India. Dilip gives the following example: VU2DPI will use the callsign as AT2DPI.

B1, CHINA. The Beijing DX Club will participate in a Multi-Multi operation during this upcoming CQWW CW Contest. They will set up two stations operating as B1Z on all bands from 160-10 meters. The operators will be BA1AA, BA1DU, BA1FB, BA1HAM and JA1BK. Other assistant members for this event will be BA1AJ, BA1KA and BG1CL.

BRAZILIAN ISLAND DXPEDITION. Look for ZV3A and ZV3C to be active December 12-13th, from Gua'ba Arch. (ed. Spelling is not current) DIB 73 (Not IOTA). Activity will be on SSB/CW and 20-40 meters. QSL via: Cx. Postal 2180, Porto Alegre/RS, 90001-970,Brasil, or Bureau.

C6, BAHAMAS. After signing C6A/N4RP for nearly two decades, Dick has just been granted the callsign C6AKP. He will air his new call for the first time during his operation from Bimini Island (IOTA NA-48) between November 20th and December 2nd, including a low-power all-band entry in the CQWW CW Contest. QSL C6AKP either direct to Dick's home QTH: (2805 Casita Way, Apartment 115, Delray Beach, FL, 33415) or via the W4 bureau.

CANCELLED OPERATION. Joergen, OZ8AE, informs us that his trip to Greenland from November 11th through December 2nd is now cancelled. He reports that he is in the hospital with severe pains in his back and hopes that the doctors will find out what is wrong.

CO, CUBA. Look for Ed, CO2MA, to use CO0CW in the CQWW CW Contest on 15 and 40 meters. QSL via P.O. Box 21056, Alamar, Havana 12500, Cuba.

F, TRISTAN ISLAND (France). Francis, F6HKS, will be active from this French island (counts only for the French Island Award DIFM as AT056) on December 21st from 1000-1600z if weather permitting, or on December 23rd same period.

FR/G, GLORIOSO. Zareh, VE2NW, received the following info from Jacques, FR5ZU, about his recent operation from Glorioso, as FR5ZU/G. He had trouble with his power supply unit. He was unable to use his transceiver, portable computer and camcorder. The logs ended up being taken on paper and will be forwarded to VE2NW as soon as he gets some free time. They are extremely busy right now with the Cyclone season. Jacques ended up using a battery from a tractor on Glorioso.

FR/T, TROMELIN. Henry, FR5ZQ, was reported active again as FR5ZQ/T during this past week. Activity was mainly SSB on 10 and 20 meters. Some 15 meters CW activity was reported. The length of his stay is unknown. QSL via home call.

FY, FRENCH GUIANA. The "DX News Sheet" reports that Dave, DJ0PJ, will be active again in December, but will QRT while in Germany for Christmas. He will also be active again in January as FY/DJ0PJ. Suggested CW (QRP) frequencies are: 14060, 21060 and 28060 kHz. QSL via home call.

HC8, GALAPAGOS. Ted, HC8K, reports that he will be leaving for a short DXpedition Tueday, November 24th. Activity will be mostly digital modes (RTTY/Pactor). There will also be a lot of 6 meters from a couple of Islands. The island of Santa Cruz will be activated first for a few days and then another island called Floreana Island. There will be two or three operators: HC8DH/Herbert, HC5AH/Jorge and HC5K/Ted; possibly HC3FD/ Fernando (NOT TOO SURE). The operation will take about 8 days with some interruptions during the travel and set-up. QSLs go direct to HC5K: P.O. BOX DX, CUENCA - ECUADOR, SOUTH AMERICA.

HP, PANAMA. The "DX News Letter" reports that DL2BAY and DL5XX will be on the air again as 3E1DX during the CQWW CW Contest. QSL via N0JT.

HS98, THAILAND (Special Event). The Radio Amateur Society of Thailand (RAST) has been asked to provide back-up support to the Communications Authority of Thailand (CAT) for Telecommunications during the 13th Asian Games, December 6-20th. A nation-wide network will be set up using HF (mainly 7060 Khz SSB) plus the 2 meters band, and packet for this purpose. The opening ceremony at the new Hua Mark Stadium on December 6th will be presided over by His Majesty King Bumipol (HS1A) who is also the Patron of RAST. A total of 43 countries will participate in the games. The special event callsign HS98AG will be used during the period to publicize the event. The QSL manager is HS1CKC.

LY60, LITHUANIA. There are about 20 LY stations active with the LY60 prefix to celebrate the 60th anniversary of the Lithuanian ARC (LRMD). Also active is LY60RMD the LRMD HQ station.

PALESTINE. The "DX News Sheet" states that John, K4MM, reports that Palestine was granted an international dialing code and an amateur radio callsign prefix block at the recent ITU Plenipotentiary Conference in Minnesota, USA, and could become a new entity when the callsign block is actually allocated.

QSL INFO AND NEWS.....
For those who have been asking, YES, logs are up on the WEB for the BQ9P operation at: http:www.qsl.net/bq9p

EX2M has a new QSL Manager. It has been reported that "due to 'irregularities' with the previous manager leading to rejection by DXCC" a new manager was appointed. Send QSLs to W3HNK for EX2M contacts. His address is: Joseph L Arcure Jr, POB 73, Edgemont, PA 19028, USA.

JUST ANOTHER REMINDER. HH2HM/F is not the QSL Manager for BA4TB. The correct manager is 9A2AJ. 9A2AJ is the QSL Manager for BG4TBD, BD4TB and BA4TB. QSL direct or via bureau (Tomislav Polak, P.P., 34551 LIPIK, Croatia).

FM5GU and FM5GU/I QSL cards are to be QSLed via WA4JTK, direct only. FM5GU reports to OPDX that WA4JTK does not accept bureau cards.

Effective the 1st of December, QSL Manager Alan, VK4AAR, will have a new mailing address of: Alan Roocroft, PO Box 421, Gatton, QLD 4343, Australia. QSL direct only to this new address for a FAST turnaround for the following stations: V63PD, VK8AN, VK8AN/6, VK8MI, YJ8AA, ZK2JJ, ZK2PJ and VI0ANARE (but **NOT** VK0ANARE). If anyone has sent to his old Dalveen address, it will reach him OK, so do not re-QSL, but please use the new address for all future correspondence.

Robin, DU9RG, has informed OPDX that he is no longer the QSL Manager for 4G50N. The cards for this contact can be sent via the bureaau. All cards sent to him direct or via the bureau will be forwarded to the station in Naga City. Robin states he is not able to send out cards directly from his end as he has not received all the logs from the station. He has only the logs for the contacts made during the first week of operation (January, 1998). For those who have already sent the cards through him, there is no need to send another QSL as all cards, IRCs, green stamps, and SASEs have been sent to Naga City. He suggests to be patient.

SPECIAL PREFIXES. As reported by Radio Amateurs of Canada (RAC) from their Web site: "To commemorate the 75th anniversary of the first two-way trans-Atlantic exchange between Amateur Radio Operators, the Industry Canada (Canada's FCC) has authorized the use of the following special callsign prefixes from December 1st to December 31st (normal prefix/special prefix): VE1 to CG1, VE2/CG2, VA2/CF2, VE3/CG3, VA3/CF3, VE4/CG4, VE5/CG5, VE6/CG6, VE7/CG7, VE8/CG8, VE9/CG9, VO1/CJ1, VO2/CJ2, VY1/CK1 and VY2/CK2." "Help take note of a very special event in the history of International Amateur Radio, and work one of these prefixes...73" de Eddy, VE3CUI

T30/T31/T32/T33 NEWS (DL1VU trip). This information is courtesy of Tuck, KH6DFW (T32BI). Tuck has a daily schedule with Phil, T32O, who currently has DL1VU and DJ5IW (T32VU and T32IW) as guests at his QTH. Phil reports that Karl, DL1VU, will not be going to T31 (Canton Island) as previously announced due to transportation problems. The ship was already booked full except for deck passage, which Karl declined. He will instead go to Tarawa (T30) and then on to Banaba Island (T33). He has confirmed transportation arranged to Banaba. The ship will proceed from Christmas Island to Tarawa via Washington and Fanning Islands. It is unknown if he will be able to operate from those IOTAs. A detour of this ship to Canton would have cost an additional 1500 USD, which Karl declined. The other operator, Gert, DJ5IW (T32IW), will remain at Christmas Island until the first part of December, when he will return to Germany. Phil does not have the exact dates at this time for Karl to be on Tarawa or Banaba.

TM, FRANCE. The LNDX reports to look for Jean Yves, F5HWB, to activate the special event station TM8UN for the French National Association for the Disabled from November 28th through December 6th. QSL via F5HWB.

UA0, ASIATIC RUSSIA. Look for Yuri, UA0SJ, to be active in the CQWW CW Contest 1998 from Zone 18 as a Single Op/All Band (100 watt) entry. Please send QSLs for the contest and all QSOs direct only via: Yuri A. Maltsev, P.O. Box 2304, Bratsk, 665700, Russia

UP5/UP6, KAZAKHSTAN. Look for Yuri, UN6P, to be in the CQWW CW Contest as UP6P as Single Op/All bands entry. This callsign will also be used by him in other future contests. Also, Romeo, UN5PR, will be using the callsign UP5P in some future contests (but not in CQWW CW Contest). QSL for UP6P and UP5P are to be sent via UN5PR: Romeo Y. Loparev, P.O.Box 73, Temirtau, 472300, Rep. of Kazakhstan.

V85, PULAU MUARA BESAR (Brunei). By the time you read this V85QQ will be QRT. Activity from IOTA OC-184 was by Hans, DF5UG, (assisted by Gary, V8GTW). QSL to DF5UG. LAST MINUTE UPDATE/WRAP-UP: Hans became active at 1200z November 20th. On arrival at the Island, he found it deserted. Previously, a few people had been living there. Luckily he had planned to be self-contained (Robinson Crusoe Style). He set up the station under an unused wooden shelter, and installed the vertical antenna supported by a bamboo pole on top of an old water tank tower. He has two 70 AH Car Batteries to drive the rig loaned by Gary, V8GTW. He plans to use one each night. He had food and water prepared for just two nights. He had to cocoon himself in the shelter with a mosquito net. Hans took a 2m rig with him hoping to keep in touch with mainland Brunei via the Saba Repeater. He can hear the repeater, but his transmitter failed. So, all contacts were via HF. "This is the picture behind the callsign HI"
73 de Ray, HS0/G3NOM. (ed. GEEE! The things we crazy DXers do to put a new one on the air!)

VP5, TURKS & CAICOS ISLANDS. Vic, N4TO, is currently on Middle Caicos and will be there until December 2nd. Before and after the CQWW CW Contest he will use the callsign VP5/N4TO and will be active on all bands 160-10 meters including the WARC bands. Operation will be primarily CW. Vic mentions that he may also operate on 6 meters if an antenna is available.

During CQWW Contest look for him to operate as VP5M. QSLs for VP5/N4TO and VP5M should be sent via N4TO.

WE STAND CORRECTED! In last week's bulletin, OPDX.383, under "IMPORTANT NOTICE AND REMINDER!", should have read ..... "the U.S. Postal Service will increase their rate effective January 10, 1999, from 32 to 33 cents" (not January 1st). The actual announcement dated October 13th is as follows (TNX WE9V): FOR IMMEDIATE RELEASE
Stamp News Release Number 98-113
USPS Web site http://www.usps.com

POSTAL SERVICE TO ISSUE RATE CHANGE STAMPS
"H" STAMP FEATURES UNCLE SAM HAT

WASHINGTON. Non-denominated "H" stamps will go on sale at post offices nationwide beginning November 9. The stamps are being issued to support new postage rates effective January 10, 1999.

XZ, MYANMAR. If you are not an OPDX InterNet Subscriber, you missed the special announcement/bulletin which stated that the Central Arizona DX Association and members of the XZ1N have extended their operating date to December 14th (not the 6th as first announced). The first group of operators have arrived and have began setting things up while doing some operating. The second group of operators will arrive on November 27th, just in time for the CQWW Contest. Dick, N6FF, reports that the "XZ1N is still in the process of putting up antennas. The 80M vertical should be up shortly. The 160M station is up and running. They made about 15 QSOs on 160M last night. Even with the beverage antennas they have considerable noise. They will be there for almost 3 weeks, so everyone who needs them should have an opportunity." QSL via W1XT. The XZ1N WEB site can be found at: http://ng7m.qrq.com/~xz1n

Good initiative !! Welcome into the wonderful world of morse code.

Try some of the maritime stations (coastal station) on 8 and 12 mHz.
They often send traffic lists. Anyway, you get a chance to copy callsigns
and learn where the various prefixes are from, if you check the callsign
list in the ARRL handbook.

Good luck and welcome

73 Rag OZ8RO in Copenhagen

3855. WTB: TET Monobander Ant

Looking to buy myself a new radio as a personal Christmas present this Christmas to replace my trusty ole 990 and would appreciate some advise and comments -

I work almost exclusively weak station dx (cw) and seldom if ever use SSB. Receiver sensitivity/selectivity and quality filtering in a rig is paramount to me. SSB audio output quality and power output (while important) are secondary...

In looking over the specs for the Yaesu 1000MP and 920, the 920's sensitivity is rated at .13uv while the 1000MP is .25uv - ?? What am I missing?

Also, the ICOM 746 or 756 receiver specs are looking very good to me - with sensitivity being <.16uv for the 746 and .15uv for the 756...

Comments? Suggestions?

Thanks - here or E-mail as you choose....

John

I have an IC-756 and the stock filtering for CW is awful (2.8 kHz).
You will need to add at least one 500 Hz filter. If you want to be
able to use twin PBT (passband tuning) to narrow that further, you
will have to buy two (one for each IF). Also, the 756 only has two
filter slots, so if you add two CW filters, you won't be able to add
any for SSB, but it sounds like you won't need them. I have two CW
filters and find the stock SSB stuff adequate.

One really nice thing about the 756 is the real-time band scope which
is active while you are listening (according to the reviews, this is
not the case with the band scope on the 746). With the filters cranked
in tight, I can't hear nearby stations, but I can still see them on
the band scope.

I also find the DSP to work very well on the 756 for cleaning up
interference.

The built-in keyer on the 756 is one of its weak points. Other than
having 4 memories, it's pretty primitive. There is no way to
accurately set or determine the keying speed, you just turn the speed
knob until it's where you want it. There is only one kind of keyer
emulation and the only adjustment is the dot/dash weight ratio.
Programming the memories is done through the LCD screen, not the
pddles. Also a minor nit, but I don't like having the paddle jack on
the front panel.

Get a FT-1000 or FT-1000D. These are very good. Low phase noise and high dynamic range. No filter blow by. Stock SSB filter shape factors measured at better than 1.3:1. Combine with a JPS-NIR-12 for 50 Hz CW bandwidth and you will have a very good combination. NIR-12 also very good for SSB. I have this setup (1000D+NIR-12) and it is very good.

There is MUCH more to a receiver than sensitivity.

Russ

Consider the Ten-Tec Omni VI. I have heard several experienced DXers
give it top marks for weak-signal work.

I've only used this rig during Field Day. It does have the quietest
receiver I've ever heard. At times I was thinking "the antenna must be
loose" when tuning dead spots on the high bands.

John...I have had an Omni 6+ for about seven years. I primarily do
DX'ing on 40/80 mtrs, which calls for good rcvr sensivity as well as
an AGC circuitry that will handle QRN well. I had a FT-1000MP for
three months and did a lot of A/B antenna switching between the two
and found both of them to be almost equal. However the MP has one
outstanding CW problem. When you turn on the 455kc 500Hz or 250Hz
filters, you get an awful audio thump. You can mask the thumping
somewhat by type of head phones you use, but your masking it and not
fixing it. There is a design flaw (my opinion) as Yaesu uses diode
switches for all filter selection EXCEPT these two filters. For some
reason they decided to use steering diodes to select these filters and
that is where the thump problem is generated on the AGC line.
Only other suggestion is filters, I would not buy the Yaesu filters, I
would buy the INRAD set of filters for the MP. However in strong
signal conditions, there IS some filty blow-by on the IF board.

Good luck,

Tom/W4BQF

Do you have a receiver which covers 200-425 kHz? If so tune around
that area at night. In North America that band is home to thousands
of aerobeacons which repeat their 1, 2, or 3 letter CW identifiers
over and over, and most of them are fairly slow. Note: they use AM
mode not CW.

Mr. Knope's CB Web Page would be fine except that it is loaded with instructions as to how to modify CB radios so that they transmit out of the Children's Band. I know, he has a warning about "These instructions are for educational purposes only yadda, yadda, yadda...."

When was the last time an amateur operator modified his equipment to operate on a band that it is not intended for? Funny, all the "HF'ers" I ever heard were CB wannabees invading the amateur bands, not vice versa.

To all radio amateurs

SB DX ARL ARLD047
ARLD047 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, DXNL, The Daily DX, QRZ DX and Contest Corral from QST. Thanks to all.

JAMAICA, 6Y. Look for the all-time new prefix 6Y2A to be QRV during the CQ WW DX CW contest as a Multi/Multi entry. QSL via WA4WTG.

MALDIVES, 8Q. UA9CI, UA9CFF, UA9CDC, UA9CDV, UA9CLB and UA9CKP will be active using CW, SSB and RTTY as 8Q7DV until December 4. They will also participate in the CQ WW DX CW contest as a Multi/Single entry. QSL via UA9CI.

CHINA, BY. The Beijing DX Club will participate as a Multi/Multi entry during the contest as B1Z. Activity on 160 to 10 meters is planned. QSL via operator's instructions.

AZORES, CU. Dieter, DL3KDV, and Maike, DL4XS, will participate in the CQ WW DX CW contest as CU2V. They will be here until December 1. QSL via DL3KDV.

TURKMENISTAN, EZ. EZ0AB will be active on 160 to 10 meters CW and SSB, including entries in the CQ WW DX CW and ARRL 160 meter contests. QSL via UA4FAO

GALAPAGOS ISLANDS, HC8. Look for HC8DH, HC5AH and HC3FD to be QRV from Santa Cruz and Floreana Islands until December 1, mainly using digital modes and 6 meters. QSL via HC5K.

PANAMA, HP. DL2BAY and Stefan, DL5XX, will be on the air again as 3E1DX during the CQ WW DX CW contest. QSL via N0JT.

MONGOLIA, JT. The South China Sea DX Team will be QRV as JT1A as a Multi/Single entry in the CQ WW DX CW contest. QSL via OH1RX.

GUAM, KH2. The Guam Contest Club will participate in the CQ WW DX CW Contest as AH2R from IOTA OC-026. QSL via JI3ERV.

NORWAY, LA. Look for LA8W to be a Multi/Single entry in the CQ WW DX CW contest. QSL via LA4DCA.

ARUBA, P4. P40E and P40W will be Single Op/All Band entries in the contest. QSL via W3HNK and N2MM, respectively.

BRUNEI, V8. V8A will be a Single Op/All Band entry in the contest. QSL via JH7FQK

CAMBODIA, XU. Look for XU1A to be QRV from the ancient temple city of Angkor Wat from November 26 to December 4. CW, SSB and RTTY from 160 to 6 meters is expected. QSL via JH1AJT.

MACAO, XX9. Pertti, OH2PM, will activate XX9X as a Single Op entry in the contest. QSL to OH2PM.

THIS WEEKEND ON THE RADIO. The CQ World Wide DX CW Contest will certainly keep contesters and DXers busy this weekend. Please see November QST, page 97 for details.

On HF, sensitivity is an almost meaningless term. Chose your rig
based on the receiver's strong signal handling abilities. You want
one with excellent phase noise performance.

---------- DX means long distance - foreign contact.

Also can be used to mean any place other than local.

In the USA and Canada it referes to any place but the USA and Cananda.

When using higher frequency (not short wave stuff) which typically only go a
few miles to a few hundred miles - the term DX means unusually long range.

The book that came with he radio should suggest the optimal antenna for a
radio. The best bet is to use a ham radio antenna that covers the
band(s)(frequency ranges) which can be a properly sized whip (not just any old
whip) or what is called a dipole. These antennas are long wires either
sticking straight up or can be stretched out over some 20 feet or more.

Hello Jane --- DX is an abbreviation for "Distance". For short wave
listeners -- it is the pursuit of listening for far away stations.

One can send a card to the short wave stations for confirmation of the
reception. This is called QSLing.

For more on DX and QSLing see URL:
http://www.ac6v.com/pagej.html#SW

For antennas -- indoor and outdoor -- see URL:
http://home.inforamp.net/~funk/page6.html

P.S. You can also listen to Ham Radio Stations and send for QSL cards.
For Ham Frequencies See URL:
http://www.ac6v.com/pagev.html#HF

From: Dale Martin <kg5u@hal-pc.org>
Message-ID: <73kpfhdoa1@news.hal-pc.org>
Source record: 26931

Hi, Jane.

First, DX means (literally) Distance. In amateur radio it refers to anything that is some distance away according to the frequency....HF = foreign countries; VHF/UHF = across the street, subdivision, city, county, state, country, hemisphere, etc.... HF is good for DX'ing (listening to and/or contacting DX stations), VHF/UHF is generally good for line-of-sight (a bit beyond the horizon), satellite, E-layer bouncing, meteor scatter, tropospheric scatter communications....

In your case, you asked about an indoor antenna. May I recommend you put up as much wire as you can and connect it to the antenna input of your receiver. You can use very small wire (#28, #30) that can hardly be seen unless you know it's there. With tacks you could 'string' it up along the corners of the ceiling/walls of your apartment/room/house. It would be much better, though, if you could get the wire outside somehow, in toto or in part. Metal, piping, conduits, wiring, concrete, steel, etc., in the structure of the building will tend to reduce the 'efficiency' of indoor antennas. Getting them outside will help your receiver's ability to receive a lot.

You might also consider buying a lowcost (25-35 dollars) antenna tuner to 'tune' the antenna for the frequency you wish to listen to. There's a thing called impedance matching which, when the antenna impedance is matched to the receiver input impedance, the transfer of energy (signals) is maximized. An antenna tuner equalizes two impedances, or makes the receiver impedance think it's seeing a matched impedance from the antenna, thereby maximizing signal/energy transfer to the receiver and signals then are a bit louder.

There are also devices called "pre-amplifiers" or "preselectors". They are attached between the antenna and the receiver antenna input and actually electrically amplify the signals coming down the antenna. They are tunable to the range of frequencies you tune the receiver to. They are more effective than an antenna tuner, but are also more expensive. They will, though, overcome the effects of the indoor antenna's attenuation by the building structure and infrastructure.

Good luck, good listening, and have fun listening to stations from distance and exotic places...that's how I got started in ham radio.

regards,

Dale Martin, KG5U

I sent mine registered and got the return ok. I know another fellow that did it the same way and also got the card. If you need it spend the extra as you may not have another chance.

SB DX @ WW $OPDX.385
Ohio/Penn DX Bulletin No. 385

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 385
BID: $OPDX.385
November 27, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, K3ZO, W3UR & The Daily DX, KR3I, K4YT, N6FF, N6RT, NH6YK, BA1DU, DJ5AV & DX News Letter, FK8HC, G4BUE & DX News Sheet, HA1AG, HS0/G3NOM, LU1DZ, PY1KS, RA6CO, SM7PKK, VK2SG RTTY DX Notes, ZP5AZL and ZS5BBO for the following DX information.

EDITOR'S NOTE: Due to the upcoming CQWW CW DX Contest and some additional announcements of stations participating in the contest, I felt that an earlier release of the OPDX bulletin was warrented.

5X, UGANDA (A dedicated operator!). Mats, SM7PKK, will be active as 5X1Z in the CQWW CW Contest. He is currently on a mission to Tanzania and will arrive back in Uganda (hopefully) 1 hour before the contest. This definitely means he will not be set up for a multi-band effort, so he will stay on a single band, either 10 or 15 meters.

7Z1AB ACTIVITY. Karl, K4YT/4X, reports he was in Riyadh during September and was able to operate sometimes after work. He states that the station has not been shut down as reported earlier, just no operators. He talked to Johnny O'Dell, KA5BQM, who is one of the communicators at the Embassy, and was told that he has lost interest in Ham Radio. Johnny did say that if any TDY'er comes to the embassy they can use the station. The station is located in the basement of the embassy. There are 3 radios with amps and a 6 element tribander. Unfortunately, non-embassy employees are not permitted on the compound unescorted and therefore cannot operate a ontest without, for example, Johnny being there. Karl states that he will be going back to Riyadh early next year and will try to do more operating. There are about 10 people in the Embassy's radio club, but all work for private companies and therefore cannot have unlimited access to the station. In case anyone wants to contact Johnny, he can be reached at Unit 61307, APO AE 09803-1307.

9M6, EAST MALAYSIA. "The 59(9) DXReport" states that Phil, G4JMB/VR2CT, will be active as 9M6CT from Kota Kinabalu, December 7th through January 16th and again in March/April. QSL via G4JMB.

9M8, PULAU SATANG (EAST MALAYSIA). Hans, DF5UG, reports that his OC-165 operation is cancelled due to bad weather. He hopes to return in March/April 1999.

A6, UNITED ARAB EMIRATES. Bernie, editor of "The Daily DX", is in Dubai. He has been busy visting with Ali, A61AJ, and his family. Bernie has been able to get on 160, 80, 40, 30, 20 and 10 meters at several times during his stay. He states to look for A61AJ to be extremely active this weekend on 10, 15, 20, 40, 80 and 160 meters in the CQWW CW DX Contest as a Multi-Multi effort. QSL via W3UR. He mentions that he still does not know his exact return date.

C4, CYPRUS. The "DX News Sheet" reports that Ivo, 9A3A, will be active in the CQWW CW Contest as a Single Op/All Band entry as C4C.

FK, NEW CALEDONIA. Look for Franck, FK8HC, to operate in the CQWW CW Contest. The operation is planned to begin November 25th or 26th. He plans to enter the contest as a Single Op/Single Band on 10 meters.

FT5Z, AMSTERDAM ISLAND. FT5ZH is now active on the air with two stations. Their planned activity will last until December 23rd. They will operate on CW/SSB/RTTY. They have been heard on 14215 and 21295 kHz the past few days. The "VK2SG RTTY DX Notes" states to "Expect RTTY from them during the 3rd and 4th week of operation." QSL via F6KDF, either direct or via bureau. OPDX InterNet Subscribers will receive an addtional bulletin containing the latest press release by Jeffrey Pawlan, WA6KBL.

HS, THAILAND. Just a quick reminder for the upcoming CQWW CW Contest that the stations in Thailand have special permission to operate on 80 and 160 meters this weekend. Normally stations in Thailand are not permitted to use those bands. They will be limited to 3534-3536 KHz on 80 meters and 1840-1850 KHz on 160 meters. There will be plenty of stations active especially some newcomers. Look for E22AAA to be activated by a bunch of newcomers with the help of HS1CHB. This group (other than HS1CHB) have just upgraded to HF status, so be patient with this one. QSL to HS1CHB. In addition a number of hams will operate their individual stations. E21IZC will be one of them. Look for HS5AC to be activated by HS1NIV and other students at Chiang Mai University. QSL via W1ZS. Other stations to enter will be: HS0AC (QSL Manager HS0/G3NOM), HS7AS (QSL to P. O. Box 7, Sripachan, Suphanburi 72140, THAILAND) and HS8AS (QSL to CBA).

NEW 10 METER BEACON. Alberto, LU1DZ, GACW Coordinator, reports that on December 7th, during the Martin, LU4XS, 77th birthday, he will be visiting Martin in the southern part of Tierra del Fuego Island to join with Jorge, LU7XP, in the installation of the new GACW beacon. The location will be Moat Ranch, Moat River and Beagle Channel (150 km. west of Ushuaia city in Tierra del Fuego Province). The transmit frequency will be 28.190 kHz. The beacon will send out a 45 second message saying, "LU4XS GACW LAT LONG

and LOCATOR", every 90 seconds. The power will be 3/4 watts output and the antenna is an inverted VEE (9 meters high). Every correct report of the message will be confirmed with a postal card. Please send your card via bureau or to: GACW, Box 9, 1875 - Wilde, Buenos Aires, ARGENTINA

NH4, MIDWAY ISLAND. Ted, NH6YK, will be back on Midway from December 20th to January 2nd, as NH4/NH6YK. He will have more time to operate than on his last two trips. Activity will be on HF SSB and 6 meters. There is a slight possibility of RTTY. QSL via the home call.

P4, ARUBA. Ed, KR3I, will be operating as P40I from December 1-8th. His activity will be on 40-10 meters and also 80 meters, if there is an antenna available. Operations will be mostly CW with some SSB in the general bands depending on condx. QSL via KR3I/bureau (He will be getting cards printed after his trip!)

PY, BRAZIL. Alex, PY1KS, states to look for him in the CQWW CW Contest as a Single Operator/All Band Low Power (SOLPAB) entry.

QSL INFO AND NEWS......
OOOPPPPSSS! I guess we jumped the gun last week. The logs for the BQ9P aren't up just quite yet. Steve, KU9C, is typing furiously to have them on-line as soon as possible. Stay tuned! Also, the URL address we published last week was missing the first two slashes. The address should be: http://www.qsl.net/bq9p/

The QSL manager of B1Z for CQWW CW and the SSB Contest is JA4HCK.

NEW QSL MANAGER. The team of RM6A now reports that they have a QSL Manager and this is Joe, W3HNK. Joe will be able to provide QSLs for the 1998 CQWW CW Contest and after. For all contests before the 1998 CQWW CW Contest must be QSLed to: Sam Dubovtsev, P.O.BOX 600, KRASNODAR, 350062, RUSSIA

NEW QSL MANAGER. Zoli, HA1AG, informs OPDX that he is the QSL Manager of Chuck, T32NCC. Chuck lives on Fanning Island (OC-084). His operation has been approved by the IOTA Committee. The QSL cards have been printed and Zoli has received the first logs from Chuck. Please send your QSL requests to: Zoli Pitman, Somogyi Bela ut 18, Gyor 9024, Hungary. In the last two editions of the RAC, Zoli's zip code was given as 9300. It's wrong! QSL requests sent without SASE or via the bureau will be answered via the bureau. Anything in excess of the needed return postage will be sent to Chuck to improve his conditions. 1 USD or 1 IRC covers the return postage. Donations of any kind would be gratefully appreciated and will be forwarded to Chuck, T32NCC. He must make frequent repairs to his equipment due to the harsh environment. He's using a 4 year old TS-50, which is already rusting internally. His primary need is equipment: antennas, coax, connectors, etc. Zoli can arrange shipping. Please note that there is no E-mail and not even a telephone on Fanning Island. The mail is picked up every 3-4 weeks by cruise ships and taken to Hawaii. After Zoli receives the logs, he will send out the cards within a couple

of days.

V6, MICRONESIA. The "DX News Letter" reports that Ann/WA1S/V63HO, Charlotte/KQ1F/V63HC, and Paul/K1XM/V63YP, are on Kosrae Island (OC-059) from now until November 30th. Look for them to be on Pohnpei (OC-010) from November 30th until December 3rd and on Truk Island (OC-011) from December 3-9th. They will sign V63X during the CQWWDX CW. All QSLs via KQ1F.

VK9L, LORD HOWE ISLAND (Now active). Remember to look for Nick, VK2ICV, to be active from here as VK9LX during the CQWW CW Contest. The team that is there will be active now until December 1st. Reportedly, they have two stations up and working. Operations will be on 160-6 meters on CW, SSB and RTTY. Their Web site which contains propagation forecast is at:
http://qsl.net/vk9lx
QSL via VK2ICV, Nick Hacko, Box 730, Parramatta, NSW 2124, Australia.

VR2, HONG KONG. Look for Frank, DL3MFN, to be active as VR2FD or VR98FD for the next 2 years. Activity will be mainly 17 meters and 15 meters. QSL via DL3MFN to the DARC bureau.

XT, BURKINA FASO. Michel/F5RLE and Joel/F5AOW will be active in the new year between February 7th and March 1st, as XT2DW (on SSB) and XT2DM (on CW), respectively. They will be active mostly on WARC bands. QSL via F5RLE.

XZ1N, MYANMAR (Update). The station XZ1N has reportedly logged a little over 7,000 QSOs as this bulletin was being prepared. There will be another 7 operators arriving on Friday, November 27th, to augment the 5 that have been operating and constructing the stations. They are currently running 3 stations, and will have the 4th up and running on Friday. Remember to look for them during the contest this weekend.

ZK3, TOKELAU ISLANDS. Lee, 3D2VA, reportedly has talked to Ron, ZL1AMO, during this past week, and states that Ron is going to try and go to Tokelau again sometime in December. Hopefully transportation will not fall through this time.

ZP, PARAGUAY. Tom, ZP5AZL, reports to OPDX that he will be active in the ARRL 10 Meter Contest December 12-13th, with the callsign ZP5Z (HP). QSL via W3HNK.

ZS3, SOUTH AFRICA (Operation Cancelled). Edwin, ZS5BBO, reports to OPDX that his planned expedition to ZS3 (refer to OPDX.378) from Kimberley, the "City of Diamonds", in December has been postponed. He states that he needs a break from all the Amateur Radio activities/events that he has been participating in since the CQWW SSB Contest and also ZS75SIG operation. He wants a break without amateur radio during his Christmas holiday. Edwin will, however, go to ZS3 during 1999 sometime and has kept the callsign ZS3MM. He is very sorry if he had put up the hopes of many operators who were wanting to work him from the ZS3 area. Also, Edwin sends a note of thanks to all the operators who have supported the ZS75SIG special event station. This call will still be used until the end of November, 1998.

QSL cards will only be sent out in late January, 1999, due to him leaving on holiday in mid-December.

MORE CQWW CW DX CONTEST STATIONS (Quick List). The following was put together from various bulletins (OPDX, DXNS, DXNL, ARRL DX Bulletin, The Daily DX, National Contest Journal, QRZ DX...(ed. GEEE... I hope I named all of them... TNX to all).....

Callsign	Category	Operator(s)

This is the sleepiest newsgroup ever. OK well I have a question. I'm just starting out (at 41) and my sole interest is DX'ing, QSO's, the whole bit. Beyond those buzzwords there's not a whole lot I know as far as what bands are better at what times of year etc. Would anyone care to expound on this stuff a little or recommend a book (someday I'll get time to go buy one or two).

On the advice of a ham friend I'm going to erect a 40 meter vertical. My property has too many trees and wires all over so the vertical seems to be my only choice.

Anyway enough drivel.

Thanks, Don

CW operator for DX-vacation
In Februar 99 I am planning my 11th visit to Solomon Islands.
I am looking for an experienced CW operator,who is able to adjust
to local conditions,for an operation from Temotu starting 5.to
10.Febr. at the location where H40AB operated in last April.

<SOAPBOX><RANT MODE>
Last night I heard 3 (FT, XZ, and XV300) of the most disgusting pile ups Ive ever heard. And I have been on both ends. People were calling, giving their calls 6,7, and even 8 times. Or if the Operator asked for example CH, Every imaginable call was sent out. If he asked for 7's I hear 6's, 8's,9's 0's and everything else still calling. Some ops would never even stop calling, just constantly giving there calls, waiting 2 -3 seconds and calling again. On the XV one op clearly could not get his call to the dx (the dx was getting partial) just keep screaming louder and louder till he splattered 10kc and sounded like he was eating his mike keeping the dxer busy for 10 min trying to get it. I fault the dx for that too but the 8 lander after a few should have just given up.

I've been at this "HOBBY" for some 25 odd years and Dxing a little less than that. I don't remember ever hearing it this bad. When I operated VQ9 and A9, if I heard behavior such as this the big switch was pulled.

I just don't get it. Dxers used to be gentleman, has Ham Radio deteriorated that far.

</SOAPBOX> </RANT>

Rick, I agree wholeheartedly. Last night I was in a pileup chasing an OD2 station in Lebanon. The behavior was unbelievable! During the 15 minutes or so that I tried to make contact, the DX found it necessary to QSY three times in order to complete some QSOs. It was just as you described. The DX was a good 57 at my QTH and he could rarely be heard above the din of hams giving their calls.

Like you, I'm surprised the DX put up with it. Working a pileup for long can be tiring to start with but with the kind of stuff he had to put up with I'm amazed he lasted as long as he did. I never did work him but I probably wouldn't have heard him if he had come back to my call!

Here's hoping for better behaved pileups!

I think that most DXers are considerate; however it only takes a few
STUPID BOZOs to ruin it for everyone else. About all I can offer
is to say, try to make the best of it and ignore the Bozos.

Hey you guys are too much with the advice. Thanks a lot.

Yeah the vertical is all I can handle right now. The only good spot for a 10 or 15 meter beam is on the roof and for now I have a scanner antenna on the chimney (and a watching wife). I just want to get on the air and build code speed so I can get the general ticket (or whatever it will end up being). Then I guess I'll get picky about antennas.

Thanks for all the tips.

Working split, of course, reduces this problem greatly. Most of these
constant callers, I assume, do so when they don't hear the DX station
when they stop calling. Usually this is because so many other people
are calling and covering up the DX...

During a contest it can be awkward to work split though, since
there will be someone else CQing 1 or 2 or 5 kHz up.

Howdy again Don. For phone operations. I'll leave CW DXing for another time or another responder.

The conduct of a pileup is somewhat at the discretion of the DX station, he or she can choose to run the pileup in a variety of ways. The calling stations can choose to follow an unwritten protocol or do their own thing.

Case 1. The DX station appears, gives his call, location and QSL information then announces QRZed (Who is calling me?)-- Listening this frequency.

The callers transmit on the same frequency and state their call one or two times and wait for the DX Station to pick out someone. If the DX station can't discern a caller -- they state "again" as an invitation for another round of calling.

The DX station picks out a calling station -- gives a signal report -- and turns it back to the calling station who acknowledges and responds with their full callsign and a signal report. It is quite common for all signal reports to be 59 -- this is so the dx station doesn't have a zillion different numbers in the log.

The DX station acknowledges and again sez QRZed and the cycle repeats. The essentials are that the call signs and signal reports are exchanged.

This is ideal -- but many callers wait for the mob to finish their call -- then jump in, or really can't hear the DX station too well at all and call over the top of them, or call endlessly to make a mess of things.

At this point the DX station should announce "call once only" -- but this seldom happens. So a very disorderly pileup occurs.

Case 2. Same as above -- but the DX station chooses to reduce the number of callers -- so announces "ones only" meaning only stations with the number one in their call (e.g., W1XX) will be recognized. This rotates to 2's 3's etc. The DX station may elect to limit the callers to Europe

only or North America etc, or YL's or QRP, or mobiles etc.

The DX station may elect to shorten the calling period by announcing "last two letters only" -- so stations use the last two letters of their call -- e.g., AC6V -- sez "Six Victor" or WA6WTO sez "Tango Oscar" this helps somewhat in clearing things up. When contact is made -- full call signs are given. There has been considerable debate over the this -- but it is common practice.

Case 3. The DX station announces -- listening up 10 to 20 kHz. E.G., the DX station transmits on 14.200 MHz and the callers transmit over the range of 14.210 to 14.220 MHz. Thus only the DX station is transmitting on 14.200 and every one can hear the DX Station. Callers use their dual VFO's and listen on 14.200 and transmit on 14.210 to 14.220. Since callers are spread out over 20 kHz -- its much easier for the DX station to hear the callers. This works quite well except for those that don't understand split operations and the cops who try and straighten em out.

The DX station is in control or should be -- he or she can choose to "black list" any one who fails to follow directions. This puts the fear of the rettysnitch in to folks.

Tailgating is a common but deplorable practice. During an exchange -- a smart guy throws in their call (while everyone else is patiently listening) and the DX station picks em out !!! This results in everyone trying the same nonsense and utter chaos occurs -- but its the DX station's choice.

Some Do's and Don'ts for those who care.
1. Don't tailgate
2. Call once or twice -- then give the DX a chance to respond.
3. Don't ask "Who is the DX" -- listen they will give their call and location periodically.
3A. Don't ask for the QSL info -- this info is on the Internet and DX bulletins and the DX station will announce it periodically.
3B. Don't call if you can't hear the DX station.
4. Never transmit on the DX frequency during a split operation for any reason.
5. Don't play cop -- one weak station asking "who is the DX" -- will get 80 big guns trying to straighten em out.
6. Do -- Follow the DX station instructions.
7. You must have a very accurate UTC clock. Your qsl card must state the correct date and time (not local) in order for the QSLing person to easily find you in the log. Remember the date changes at UTC 0000 not your local time.

For more on QSLing and DX tutorial -- see URL:

Lessee, round about 08 I think HI HI. I was on last night and
even a poor BY was being piled on. My <rant> seems to have touched
a nerve. It would be nice if an article or something would come
out on the dx nodes and the magazines. Somehow get the word out
to people that you can work faster if people would follow a few
simple rules. As I said I had the fortune to work as a DX a few times
(Not cause Im rich, it was curtesy of the US Navy). Was in VQ9, A9, KG4
KG6 (when it was Guam) EA7, SV, G and a few others. Always I had
these rules in the Pile up.

Give your calls twice "period" I told them in the pile up that if
someone gave multiple calls I would work them put I would put them
in my no log file. After about 3 of those the multiple calling would
end very quick.

No suffix calling. If Im going to hear you it will be with complete
calls (and I did come back with partials). But, with complete calls I
didnt have to waste time getting the rest of it if I heard it. Bout 80%
I got a complete call in the pile.

Throwing a close call out was a no no. If I asked for CH I wanted CH.
Usually I got at least two. If someone threw out CD or CB or somthing
like that, I would work the CH then the CD but the CD would be told he
missed out on a card.

If I asked for SA, Europe or west coast I didnt want to hear all the
others. Same with areas. I usually worked the areas so that the LPLA
stations (of which Im one now (LPLA = Low Power Lousy Ant) would have a
chance. When I worked areas I ask them to give State along with report.
If the states didnt match the area .. guess what. Also If the card
didnt match the state in the log ... guess what again. I had a great
Manager when I was VQ9RS. N6BLN, him and the Bay Area DX (I think NCDXC)
did a great job in the logs. Put 10,000+ in that log.

Usually if you stick to those rules and let a few that break them know
that the card was not forth coming, and let everyone know loudly why ..
the pile would clean up very quickly and then I would be able to work
them 2 somtimes 3 and 4 a min. Then everybody has a chance.

Guess Im just a stickler. In fact I would like to go on a DXpedition again but now I gotta pay for it. But its my dream to put another rare one on (with others of course) and I intend to do it by those rules.

See you on the bands

Rick KF7QZ

Not any more, Rick. If you make too many rules, and you piss a few
of the idiots off, then you have SSTV, carriers, and a bunch of other
jamming to put up with.

The problem is not with pileups. The problem is that it's 1998 and
people have no basic manners any more, either in real life or on
the radio.

Hi Jim
Well I guess you would know since you are in a semi rare one (off topic but where are you. I was at NAS Agana and lived up on nimitz hill). But, I look at it this way. I didnt need my 50th Washington state card. If it got bad then I went away, Period. I did that many times as a DX. We are supposed to be self policing (not withstanding the COPS that park on a DX Freq and try to run the show). I know that 80% of the Hams are good. We need to start cleaning up our back yard lest the govment takes it away. If the bad were to be known then maybe a few that knew him could put pressure on him. Its not a perfect world and yes real life is going morally low (I dont need to take responisibility because the puplic wont make me). Well We as hams need to make it morally hard on those that dont want to follow the rules. I for one think we should have to pay cash for our licenses. 25 - 50 bucks a year and it all goe to the FCC.

We would then be a source of revenue for them, they would be less likely to take away freqs. People who wont pay the 50 bucks are most likely the ones we dont want anyway (I know there is a few that would get lost but I afforded one when they were pay when I was a teen). Plus if You pay for somthing you would be less likely to abuse it.

I dont know what the solution would be. But that would be a start. All of it. The public pressure and the pay licence would be at least in my view a start. Their are neighborhoods that are using public pressure to clean them up. Maybe its time we told our neighbors enough is enough.

>I'm new to all of this and I think I get the idea here but can
>somebody explain to me about pileups and how the whole thing works?

Generally, a pileup is the natural result when a station shows up in a place without a lot of hams, and everybody on the band wants to work him. So rather than having just one person calling, there are dozens, hundreds, or even thousands of callers. The rare stations have several ways of dealing with this. Two of the best are "working split" and "working by numbers".

In "working split", the rare station transmits on one frequency and listens across a range of frequencies that doesn't include the one he's transmitting on. It accomplishes two things: it spreads out the callers across a band of frequencies (making it more likely one signal will stand out), and it keeps (most of) the callers off the rare station's frequency, so when he does answer someone everyone should know who he answered.

"Working by numbers" means the DX station first asks for "Ones only", then "Twos only", etc.. You call when he asks for the digit that's in your callsign. (so if you're W9WI, you call when he says "Nines only") This spreads out the callers in the time domain, and again makes it more likely one signal will stand out.

>How much automation do you think is out there? I remodeler reading
somewhere about computer >generated C's or something.

Not as much as you might think. On voice, probably next to none. A few stations do have voice recorders. (usually either digital, or devices using the ISD charge-coupled chips) On CW, many stations have "memory keyers" which can be programmed to send one's callsign at the push of a button.

That said, the rare stations do often use specialized computer software to keep the records of who they worked - and often, to print the resulting QSL cards too. Some extremely rare stations have even been known to upload their logs to a centralized HTTP server over the Internet, allowing those who think they worked the rare station to double-check that they really did get through.

I was also listening last night and couldn't help but wonder about the
total lack of consideration by DX'ers in various pileups on 20 meters.
I suppose the only way to fix it is by the DX stations telling anyone
who keeps calling after he or she has gone back a station that they
are going to be black balled. What the DX station puts up with will
decide how the DX'ers in the pileup act. I can't blame some people
for losing their cool when a DX station goes back to someone who calls
over a station they are working. It is up to the DX to control the pileups
and teach to lids they won't be allowed to get away with their crap.
It is also up to the 'gentleman DX'ers' (or ladies) to operate properly
and demonstrait how it is suppose to be done. That doesn't mean working
a XZ for the 9th time in two weeks just to 'say hello'.

>Always I had these rules in the Pile up.

Generally good rules which I'd like to see more DX stations specify.

>When I worked areas I ask them to give State along with report.
>If the states didnt match the area .. guess what. Also If the card
>didnt match the state in the log ... guess what again.

This one is a potential problem. I have a W9 call but live in Tennessee -
it never is going to match up.

Most of us call with the district in our callsign. (so I call with the 9's
despite living in 4-land) IMHO as long as there's a consistent system
(either everyone calls with the district in their call, or everyone calls in
the district they live in) it should be OK. Since the district in the call
is obvious from the call... I would think that system makes the most sense.

3919. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <742nln$fko@news.Hawaii.Edu>
Source record: 26772
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.dx

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6OO
(rec.radio.amateur working-group)

Ever notice how some pileups go to shreds quickly and others are highly
organized and efficient???

The difference being the skills of the DX operator. Call it pileup
management if you will. The experienced pileup mananger makes it very
clear how the pileup will be handled -- no tailgating, two calls only,
by the district numbers, split operation when the pileup gets too large,
answering calls by geographic location only, blacklisting the bozos,
announcements of schedules for working areas, frequent ID and QSl info,
etc.

I've even heard a DX station announce he would only accept full calls
and only with the correct phonetics -- and the mob complied.

In extreme cases -- the DX station abruptly changes frequency and starts
a new pile up -- unannounced. It takes the bozos 20 minutes to figure it
out while the savvy finds em in a few seconds.

The incredible Q-rates of the good DX operators attest to how a pileup
should be mananged.

There's a downside to this too, however. If you have three or four pileups on a band, all working split with the callers for each spread over a span of frequencies, half the band can be trashed by this activity and those not playing the pileup game get crowded out. This generates a lot of hostility toward Dxers among the non-Dxer operators. I don't think that many Dxers have a sufficient appreciation for this. When working split, I think it is more considerate to just use a pair of frequencies, one for the Dx station (hopefully outside the US phone allocations), and the other for those calling. That makes the game a bit harder for the players, but it causes less disruption to the activities of others using the band.

Walt,

Was thinking more in terms of the areas above VHF.....and the latest spectrum targets are mostly all amateur frequencies, or those 'shared' as other than the primary service some the ITU regions.

WARC bands....satellite downlinks I think they are called amongst other things...are a good example of the a bonus we got from the ITU/IARU and from member organisations such as the ARRL/RSGB/IRTS etc. The big threat (real, not perceived) is from other portions of the spectrum being auctioned, and I really don't think we can afford to buy back the regions that are the targets. Perhaps I shouldn't have said 'given away'....the plan is to sell them to the highest bidder.

Anyway, one of the only truly free lunches left in the world is the ten year ham ticket one gets from the US. But, our driving licences last a bit longer over here.

3925. RTTY and other adventures in Ham Radio...

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-02 00:00:00 UTC
From: "Curt M. Breneman" <brenec@rpi.edu>
Message-ID: <3665961A.2A09@rpi.edu>
Source record: 26778

Folks,

I built up a Hamcomm interface system for my rig, and was listening around on 80m last night. I was able to copy CW with it as well as RTTY, but there was another kind of signal that sounded like RTTY but was decoded as nonsense. I know what Amtor and Pactor sound like, and it didn't seem to be one of them (it was continuous, not "chirp-chirp-chrip...etc"). It appeared to have only a "mark" tone and no "space tone", however. When I tried different reception modes, it was interpreted as 75 wpm CW, but didn't give intelligible copy. Additionally, there was another signal on 80m with apparently good "Mark" and "Space", but were also decoded as gibberish.

Does anyone know what these two strong signals might have been?

Oh, definitely. The DX station has to keep things reasonable - maybe a
10KHz receive bandwidth if he's *really* rare. The callers have to play by
the rules here too - they need to actually listen on their transmit
frequency before they transmit there.

I'm not particularly fond of the apparently new technique of rare
expeditions announcing their transmit and receive frequencies before they
even leave for the island. It pretty much guarantees someone's QSO will get
wiped off the face of the dial. P5XYZ has the same obligation to make sure
the frequency he's about to CQ on is open that W9WI has.

$50/year times what, maybe at best 1 million hams in the USA, $50 million? That *might* be enough to outbid the commercial services for the 2 meter band in 2 or 3 of our larger cities.... We can't possibly compete with the commercial services on a financial basis - retention of frequencies has to be based on something other than economics.

A license fee where the revenue goes towards enforcement efforts I could certainly support. Problem is, these days Congress sees license fees as an alternative to federal taxes, not a way of funding new services. (even enforcement services) Part of it is that the government is simply not able to deal with the anamoly of a group of people who actually *want* better enforcement of tougher regulations! - ask your local broadcast station if *they* want the FCC paying closer attention?!

I recently came across a potentially good piece of software for DX'ers and thought I would share it with the group. I cannot give you a personal evaluation until after Christmas! It is called World Watch, and it can display a map of the world showing daylight and darkness areas as well as local times for many cities around the world. It keeps very accurate time via. the atomic clock internet connection. It also is a screen saver.

I wanted to get it because I can see where the grayline location is at all times, and see what the local time is at various places around the world.

The web address is: www.exptech.com

If someone else has used it, I would be interested in your evaluation too.

Very 73's de Terry, N7TB

3931. WAS & DXCC rules

From: wbcapps@mindspring.com
Message-ID: <3665f260.5304016@news.mindspring.com>
Source record: 26784

hello all,
I am a new ham and I have several questions concerning my QTH
in acheiving WAS and DXCC awards. Since becoming a ham , i have been
qsl'ing to achieve WAS in both phone and cw on all the various bands.
Also, i have been doing the same for my DX contacts.
i have begun to enjoy contesting both on cw and ssb. My qth is
in a urban setting with many neighbors around me. I have thought about
setting up a contest station at a lake home approximately 40 miles
from my present qth. This is to keep from messing up my neighbors with
television and telephone interference on busy contesting weekends.
If i make new dx contacts, which could be applied toward my
DXCC awards and WAS awards at this remote station, are they good
qso's for my awards? must all qso's be made from the same EXACT qth to
be good?

many thanks to all for any advice sent, it will be
appreciated! happy holidays

Although I'm a no-code so far and therefore have never worked DX,
shouldn't the difference also depend on the etiquette of the
calling stations?

Hi!

I managed to work these stations on CQ WW CW Contest, but I
don't have any QSL route for them:

XJ1JF
J45T
IS0SQJ
PZ5JR
4U1VIC
VO1MP
PJ8N
5R8OP
GU4GMW

Could anybody of you help me with that? Thanks in advance! 73,

3935. KG6OK what DXCC?

Hello and tnx fer reading

Last weekend in the cq ww tst I worked KG6OK, I taught he gave me
zone 3, and in the QRZ his adres in CA.
But when checking the call, KG6 = KH2???
Did I worked CA or guam?
tnx fer info

KG6OK is in California. He gave me Zone 3 in the contest
also. KG6 is no longer Guam. The only known Guam station
still holding a KG6 callsign is KG6ASO.

Guam stations active in CQWW CW were AH2G, KH2/N2NL,
and KH2D.

Yes Hamish the callers are a part of the equation. But as time passes you see that certain DX operators exude a confidence that leads the pileup to feel that all parties will get in the log. The DX operator is working rapidly, with certainty as to what he is doing, does not allow anyone to deviate from his instructions, generally makes us (the callers) feel that he WANTS us in his log. All of this plus a number of intangibles lead the callers to develop a patience and anticipation that is conducive to good behavior. (Most of the time)

Spend time listening and noting the small things that make differences.

Ignore the Bozos is one option. Another one is the DX-station's operating practices. The DX-station is or at least should be in a position to control a pile up. Frankly, what Rick pointed pointed out in his initial posting really is a nuisance. But it also is a nuisance the DX-station actually was asking for. Any DX-station not using split is asking for trouble. Secondly, any DX-station not sticking to its own rules is asking for more trouble. The more you ask for trouble, the more bozos will chime in to make that very trouble happen.

Without having any specific DX-station in mind, I heave heard it too often to know it is true. Any DX-station that is calling "Ones only" and works staions with Fours or Sevens in the callsign is actually sending out a written invitation to the bozos. Heck, one might even feel like a bozo himself and start calling, since the natural thought is: "He calls for Ones only and works Fours, too, so I am gonna call him anyway".

Or the funny thing about suffix only calling: "X-Ray Yankee 59" and ending up working a station with neither X or Y in its prefix or suffix. Ain't that a true invitation for calling anyway, no matter what? It's frustrating for the real "XY", but what the feck...

If a DX-station hears and identifies anyone not playing by the rules, it should not hesitate to point him out in front of the whole audience, telling him that he is not in the log. I guess anyone with a little sense in his head will start squirming behind his rig upon hearing "DK5XYZ, are you North America? You are not in log. QRZ North America only, listening 210-220".

You ask for trouble in a pile up, you will get it.

Welcome to the world of Wallpaper Collecting! Definitely check out the ARRL web site for detailed awards information on WAS and DXCC. However, in a nutshell, DXCC contacts must all be made from the same DXCC country. You can work all your DX stations from anywhere in the continental US, for example, but not Hawaii or Alaska since they are seperate DXCC entities (unless you wanted to get DXCC from one of those entities). For WAS (http://www.arrl.org/awards/was/), all contacts must be within 50 miles of each other.

If they did that, there wouldn't be a pileup. :-)

I think we have to cut them some slack on this one. I don't have a problem with announced frequencies for a Dxpedition. Of course you're right that they should *ask* for a clear frequency before beginning, or move up or down a bit to the nearest clear spot. But lets face it, a major Dxpedition is going to wind up owning a frequency for the duration of their activity. Giving everyone a heads-up in advance is probably a good thing.

Yes, but that's a constant (in the short term). A skilled DX operator can alleviate some of the problems caused by poor etiquette among the callers.

The most critical thing the DX operator can do is to stick to their own rules. If he says he only wants 8's, he *must* ignore W6XYZ, even if he can't copy a single 8 through W6XYZ's continuous calls. Once he answers W6XYZ while calling 8's, he might as well stop working by districts because the entire pileup is going to keep calling. Similarly, if he answers "W6X-something, 59", he *must* ignore KQ3ABC, even if he has to spend 5 minutes trying to pull the rest of W6XYZ's call through KQ3ABC's calls.

9X5HG had a rather different way of handling pileups - he never called CQ. Instead, he would find someone else calling CQ and answer them. Then, after the one QSO, he'd go QRT or QSY elsewhere. An enormous pileup would still develop, but Hartmut never had to deal with them. If I were to go somewhere incredibly rare, I'd be strongly tempted to try that technique for a few days...

> Franky, ON4CEL

I'm afraid he's California:
KG6OK ROSENBERG, HERBERT S LIC ISU
19-AUG-1998
EXTRA 17861 FAIRHAVEN AVE LIC EXP
10-OCT-1999
SANTA ANA CA 92705-1111 LST UPD
19-AUG-1998

KG6 is an *old* prefix for Guam, the official prefix was changed to KH2
some years ago but those who already had KG6 calls could keep them. The
following KG6s are still on Guam as of summer 1997:

KG6ARL KG6ASO KG6DX KG6JEI KG6JHC KG6JJP KG6JKT KG6JKV

KG6JJH, KG6JKR, and KG6XA are listed with U.S. military addresses and
are *probably* on Guam but not for certain. KG6UH is listed in FCC
records with a military address but I know he's in Panama these days.
(HP3XUG if I remember properly)

KG6 followed by R, S, or T used to be the prefix for what's now KH0.
KG6RE, KG6SB, and KG6SL are still there.

To all radio amateurs

SB DX ARL ARLD048
ARLD048 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, DXNL, The 599Rpt, QRZ DX, KJ9I and Contest Corral from QST. Thanks to all.

MAURITIUS, 3B8. 3B8/F6BBH will be QRV on all bands until December 13. QSL via operator's instructions.

CUBA, CO. Juan, CO8TW, will participate in the ARRL 160 Meter CW Contest. QSL via W3HNK.

LIBERIA, EL. Mark, ON4WW, is QRV as EL2WW. He looks for European stations at 2205z and North American stations at 0630z on 160 meters. QSL via ON5NT.

TAJIKISTAN, EY. Nodir, EY8MM, is now QRV on 6 meters, grid square MM48. QSL via K1BV.

FRENCH GUIANA, FY. Dave, DJ0PJ, is QRV as FY/DJ0PJ during the months of December and January. Look for his QRP signal on 14060, 21060 and 28060 kHz. QSL to home call.

THAILAND, HS. Special Event Station HS98AG will be active from December 6 to 20 for the 13th Asian Games. QSL via HS1CKC.

ARUBA, P4. Ed, KR3I, will be operating as P40I until December 8. His activity will be on 40 to 10 meters and possibly 80 meters. Operations will be mostly CW with some SSB. QSL to home call.

PALAU, T8. Look for KJ9I, NF9V and NZ9Z to be QRV as T88II from December 8 to 11. Activity on 160 to 10 meters, including the newer bands, is expected. QSL via KJ9I.

CENTRAL AFRICA, TL. Alex, TL5A, is active on 160 and 80 meters around 2100 to 2200z and 0300 to 0400z. QSL via PA3DMH.

MICRONESIA, V6. Ann, V63HO, Charlotte, V63HC, and Paul, V63YP, are QRV from Truk Island, IOTA OC-011, until December 9. QSL all calls via KQ1F.

HONG KONG, VR2. Frank, DL3MFN, is active as VR2FD or VR98FD for the next 2 years. Activity will be mainly on 17 and 15 meters. QSL to home call.

MYANMAR, XZ. The XZ1N DXpedition is now QRV. A part of the team will stay until December 14 to work the pile ups, especially those on 160 meters. QSL via W1XT.

THIS WEEKEND ON THE RADIO. The ARRL 160-Meter Contest, QRP ARCI Holiday Spirits Homebrew CW Sprint and the TOPS Activity 3.5 Mhz CW Contest will keep contesters busy this weekend. Please see November QST, page 109, and December QST, page 95, respectively, for details.

On the CD Rom... in reality, only KG6ASO still exists.... KG6DX is
in Japan (7J1AEJ/7), KG6JHC is now WH2U, KG6JKV is still in Guam
but has not been active in ham radio for many years. The other calls
are not know to the local ham community.

>KG6 followed by R, S, or T used to be the prefix for what's now KH0.
>KG6RE, KG6SB, and KG6SL are still there.

SB is unknown to the local ham community. KG6SL, Burt, was
an active HF operator who passed away a few years ago, and the
call is now issued to the local ham club. The former club call was
KG6RE.

I'd say you worked California,

If you want to work Guam, you better look for a KH2. KG6 was Guam several years ago now.

70MHz is in a television channel in Region 2, and it now looks like VHF (I think you'd call it "Band I" and "Band III") television will be with us forever in North America, so I doubt we'll ever have a 4m band here. Maybe, possibly, on a secondary basis in places that don't have channel 4 TV. (but New York, Boston, Detroit, Miami, and Washington - among many other major US cities - all use this channel)

As I recall, that's how BY1PK did it when they first came on the air
in the 80s after BY being inactive for many years. The operators were
inexperienced and preferred to just answer calls. I remember hearing
guys in the upper end of the CW bands calling BY1PK over and over
hoping to get lucky.

There is the 72-76 mHz slice which doesn't belong to TV. It's allocated
to radiolocation or something along those lines. Would be cool to have
that chunk as a 4 meter band one day.

Maybe the DX could make a game out of it. Answer a CQ, QSY away from the ensuing pileup, answer another CQ, QSY away from _that_ pileup, and so forth, trying to see how many phantom pileups could be created in the process. Maybe we could rate the DX station by the number of simultaneous phantom pileups that it can create. It could be a whole new status thing for DX.

I've always been intrigued by the phantom pileup -- the idea that there can exist for minutes this huge mass of stations all calling some DX that has long ago QSYed. It rather reminds me of the gasoline shortages here in America in the 70s when drivers would queue their cars outside of abandoned gas stations in hopes of getting gasoline, not realizing that the station had actually gone out of business months before.

Both bands seem to be interesting - and at least there is some little
hope that amateur use of the 70 MHz band will at least spread across
Europe after Slovenia has allowed its ham radio operators to use it,
and the OIRT allocation for broadcast in other countries is said to
be more and more abandoned in favour of 3 m. New pile-ups on VHF in
sight? ;-)
But 70 MHz is still widely used by the firefighters in western Europe,
or so I have been told.

Folks,

The 75MHz frequency band belongs to the FAA's marker beacon service.
Marker beacons come in three types: Outer, middle and inner, and consist
of vertically-oriented Yagis transmitting AM modulated tone signals at
low power. Different tones and "CW" tone signals are used to
differentiate between the beacon types. Beacons are used to define
fixed points along an instrument landing system (ILS) glidepath. Such
approaches usually begin at the outer marker. Until DGPS replaces ILS
for terminal guidance, the 75MHz band will not be available to amatuers.

Peter,
Thank you, that is the best statement to what Im trying to get across. the one thing we really really need to do is "Get the word out". I think its high time the "good" started to out run the "bad". Dxpeditions really need to control the operation for one. And We the Dx'ers need to control our "feeding frenzy". Im sure that if it is discussed in all forums, magazines, DX News letters it will start to make some people look at thier practices.

Last night the pile on the FT5 was a total ZOO. And the FT5 should really
be ashamed of them selves for what they pulled 2 nights ago. They came up on 14.195 and started a pile b4 going split. BUT, the bad thing was XZ1N was there trying to work people split. The FT5 BLEW the XZ right off the frequency (plus all the STUPID COPS and their games). BTW, I dont have XZ or FT5 in the log yet. And with my LPLA stations Im not likely too. But it sure doesnt help with the bozo's.

Oh and another "PET PEEVE", and I dont mind the FT pointing this out. WHY
if you already worked someone on the same band/mode are they taking the DX'ers time and somebody elses time to break the pile again. THAT is the RUDEST thing I can think of.

Oh well, RANTING off.

Gentlemen. The discussion is going exactly where I wanted it to go. My hope is that it will continue onto the DX Magazines, Newsletters and other areas so that we can maybe, just maybe clean the mess up a little bit. And if the good LORD ever allows me to go on a DXpedition some where rare. May I have the forsight and will to control the PILE up in a manner that all will have a chance.

I found about 10 KG6s on my (summer 1997) RA Callbook CD listed as Guam. There were four more with military addresses - three of them I'd bet were in fact on Guam, the fourth was KG6UH who I believe is in Panama these days. There were also three KG6 calls listed with Northern Marianas (KH0) addresses. Most of the rest were on the mainland. (I did find one or two with Hawaiian addresses)

Mind you, that doesn't necessarily mean any of them are active on the air, or even actually still living on the island...

I just finished a CW QSO that (pretty much) went the way a pileup is supposed to go.. a thing of beauty... thought it might be a good antidote to the lid complaints that seem more common these days..

Was messing around in the 160 contest, but there's still something wrong with my antenna, causing the SWR to jump up & down at about the same rate as my CW... Worked a handful of QSOs, then decided to check 80 for DX. HG5C in some European contest, that's about it. 40, well here's J68RR, but he's calling a DL on schedule, guess we'd better leave him alone. 20, not much there but.. here's a watery signal calling CQ.

"CQ CQ CQ DE XZ1N UP". Ah, finally! (I've been looking for this one for the whole expedition.. I work nights so can't be at the radio during the best high-band openings, except on weekends. Did hear them on 15 during the CQ WW but they were only working JAs, didn't seem to hear me or the W6 who called for about 10 minutes before giving up. Doesn't seem anyone else in NA knew they were there!)

OK, the computer says Myanmar is straight north - put the beam up there. How far up is he listening? Here's the pile about 1K up, about where one would expect it. Split is on, we're ready. "TU. XZ1N UP" I dump in my call - "W6<something> 5NN". OK, push the TF-Set button, OK, there's W6<something>. Set VFO B about 200 Hz above the W6's frequency & let go of TF-Set. "W6<something> TU. XZ1N UP". Dump my call again.

"W9WI 5NN". Wow, I got 'em on the second call! Send TU 5NN GM. "W9WI 5NN". Yikes, he didn't hear my report! Send TU 5NN 5NN DE W9WI K. "W9<qrn> ? 5NN". Geez, this is going the wrong direction... TU 5NN 5NN DE W9WI W9WI K. "W9WI 5NN". Ok, that's better though not quite right.. TU 5NN DE W9WI W9WI GM. "W9WI TU. XZ1N UP".

Gotta love this game...

Doug,

It's early morning here in Texas--just finished the 160 contest. 47 states and 5 DXCC countries. Not bad for a 60 foot end loaded sloper up 40 feet.

I had the same experience with XZ1N. Dropped out my call and got "4NR 5NN", a simple "DE K4NR 5NN BK" got "K4NR TU XZ1N UP". Made one call with 650 watts to my tribander up about 25 feet.

I blame much of the mess on the bands today on the sought after station. They need to control the pileup. During the SS Phone there was a single VY1. He called for a K0 and a W6 responded. He called the W6 by his callsign and told him not to bother, he'd never put him in his log. That pileup was rather meek after that!

Geez, not bad at all!
I've been using a 3/8 inverted L. It works well when it works, but I've
just about concluded it's not practical to have a variable capacitor
outdoors in Tennessee. It might work in Arizona.. I'm just about ready
to take the whole mess down & put up an inverted V.

> I had the same experience with XZ1N. Dropped out my call and got "4NR 5NN",

Congrats! They do seem to hear pretty well. I was running 500w to the
Force 12 at 65'.

> I blame much of the mess on the bands today on the sought after station.

Some are better than others. But yes, once you ignore your own
instructions it's all over..

Sounds like something VY1JA would say<g>. (and one would sure like to
hear it more often..)

>Pileups ARE I guess, always have been -- but after you finally get thru
>(and eventually you will) -- WHAT A RUSH!!
>--
>73 es GD DX from Rod in San Diego

It depends a LOT on the operating practices of the DX station. The 3Y0PI operators usually listened in a small window, maybe 10-15 kHz on CW and 25 kHz on SSB. They would tune up about 100 Hz or so for the next QSO, slowly going up and down the window in a pattern. This spread out the pileup so everyone wasn't all bunched up. Most of the wise operators recognized the pattern and had no trouble working them.

Also, the FT5ZH op I worked the other night was going by call areas and REFUSED to work anyone outside the call area he designated. The trick here is to spend enough time on each call area to satisfy that area, but not spend too much time on any area that it frustrates the other areas.

The lids who are just plain villainous (tune on the DX or call repeatedly on top of the DX's frequency using the callsign of someone else who isn't even on) need judicious applications of the Wouff Hong, Rettysnitch and Uggerumph.

One of the best ones I ever heard was by Mo, SU2MT, on 40 CW once. He must've been in a weird mood that day. At first, he jumped around in frequency after every few QSO's. Then he sat on one frequency and announced a different listening frequency after every QSO ... "Up 4" ... "Down 3" ... "Up 2" ... "Down 5" ... etc. Then he got tired of this and announced "I think I am going to answer some CQ's". Suddenly the band was FILLED with stations calling CQ. I heard him answer 5 or 6 of them.

I got quite a laugh from it!

>the game a bit harder for the players, but it causes less disruption to the
>activities of others using the band.
>
>Gary

From my experience, there aren't too many non-DXers in the bottom 10 kHz
of any CW portion of the band. Usually what happens is that one pileup
engulfs another DX station. This happened a few weeks ago when TY8A was
on about 7003 listening up 3, and D68BW (who must not have heard the
pileup) called CQ on 7005. He got completely covered up.

This is almost routine on 40 CW. DX very rarely operates or listens
outside the bottom 25 kHz, so it gets pretty crowded sometimes.

Hartmut was an interesting fellow. You played by his rules. He got quite a few people upset with him, but he stuck to his rules. He did sometimes call CQ, but he loved to ragchew and often had 30-minute QSO's. He was not one of the "599 TU" guys. I had a nice chat with him once right around his sunrise, after which he said "I think I am going to go and sit by the door as the sun comes up" and QRT!

John;
All companies are still maintaining some security around this modification.
It's
for a good reason, some of these amps are still finding their way on to the 11m
Band. I appreciate your desire to complete this change as quickly as possible,
but most hams are not willing to bridge this securuty. We all went through the
process to get the job done. 73 and good luck.

Glad to hear of your interest in c.w., there
should be more like you.

The rest of the new cb hams don't like c.w.
or are too dumb to learn it.

Most ham bands have lots of slow c.w..

I was known to write the dictionary in c.w.
or do bill boards and license plates etc.
while walking or driving to assist in learning
c.w.

Good Luck.

Phil

Yes, my QSO was one of those longer ragchews as well.. Heard him sign
off with someone on 17 meters, and just sent my call twice.
Uncharacteristically, he didn't QSY - but sent "W9WI ARE U CALLING ME?
DE 9X5HG". It was quite a pleasurable chat, but also one of his last
before leaving the country.

The nice long ragchews are the most enjoyable DX QSOs I have. Breaking
a pileup is a rush, but a good chat is unbeatable.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 386
BID: $OPDX.386
December 7, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH & The 59(9) DXReport, W3LEO, W3UR & The Daily DX, K4QD, N6FF, K7CO, W7TSQ, N8WRS, W8KKF, A35RK, CO8TW, DJ5AV & DX News Letter, DL2GAC, F6AJA & LNDX, G4BUE & DX News Sheet, HA5PP, ON5NT, PA0JR, PY1KS, UA0SJ, ZL2AL and ZS6AQS for the following DX information.

W O W !! WHAT A WEEK FOR DXERS!!!!!!!

4X, ISRAEL. The "DX News Sheet" reports that Dan, W0CN, will be active December 5-14th as 4X/W0CN. During his business trip there, Dan's activity will be SSB on 80-10 meters using a TS-450 and wire antenna. QSL via home call.

5W, WESTERN SAMOA. Look for Sakuma, JI3WLT, to be active from Apia as 5W1SA until March of the year 2000. He is currently active on 6 meters using a IC-706 and a six element yagi for 6 meters. He also has a TS-850 with him. QSL via JH7OHF.

A3, TONGA. Paul, A35RK, will be in New Zealand from December 8th until January 31st. While he is gone, Lee Reisenweber (3D2VA/VP2VE) will be "house-sitting" Paul's Lifuka Island QTH. Lee has arrived in Tonga on December 1st, and the callsign A35VR was issued to him. Paul states A35VR will be active no later than December 7th, and activity will last until at least February 1, 1999. Lee plans to be active on all bands, including the WARC bands, 6 meters, and possibly 160 meters. Lee's QSL Manager is WA2NHA. By the way, Paul is taking all 3 of his rigs to New Zealand to get them operational again before returning to Tonga.

A61AJ CONTEST WRAP UP. Bernie, W3UR, editor of "The Daily DX", reports that during their A61AJ operation they had over 15,000 QSOs, most of which were on CW during the CQWW CW DX Contest. They operated as a Multi-Multi entry and broke the Asian record. Their score is going to be around 31,000,000. QSL via W3UR.

BUREAU REOPENS. The French DX bulletin LNDX reports that after 2 years of being closed the FO QSL bureau will run again beginning in January.

CO8, CUBA. In the next ARRL 10 Meter Contest Victor/CO8HF and Juan/CO8TW will be active as CO8HF and be a Multi Op/Mixed Mode entry (Victor on SSB and Juan on CW). Also, Juan states that the log will be available on the Web page: http://db-sales.com/nfdxa/logs/logs.html
QSL via Po Box 12, Santiago de Cuba, CP 90100, Cuba.

EL, LIBERIA. Mark, ON4WW (ex-9X4WW, S07WW, 5T5WW etc.), is now active from Monrovia using the callsign EL2WW. He was spotted this past weekend on 17/12/10 meters. Check 28470, 24891 and 18118 kHz between 1200 and 1530z. His QSL Manager Ghis, ON5NT, states Mark will not return to the Western Sahara, and he is currently sending out the S07WW QSLs. Expect the 5T5WW QSLs before Christmas.

H44, TEMOTU ISLAND. Bernhard, DL2GAC, will be active as H44MS in February, 1999. This is his 11th visit to Solomon Islands. He is currently looking for an experienced CW operator who is able to adjust to local conditions for an operation from Temotu starting February 5th through the 10th. This will be at the same location where H40AB operated last April.

HR, HONDURAS. Bob, W7TSQ, informs OPDX that Gary, N7QXQ/HR6, reports that although most of Honduras has suffered greatly as a result of hurricane Mitch, Roatan Island, although it also had some damage, was spared a great deal of the problems occurring on the mainland. Although he lost his 100 foot dock (which is currently being replaced), everything else is intact, and anyone contemplating a hamming and/or diving vacation should not be afraid to consider Roatan Island. At the present time, he has no ham booking for any of the major contests for 1999. However, Bob, W7TSQ, reports that he plans to operate a Multi Mode/Low Power (Unassisted) in the upcoming ARRL 10 Meter Cotest.

HS98, THAILAND. Just a quick reminder to look for special event station HS98AG to be active this week (December 6-20th) during the 13th Asian Games. Please refer to OPDX.384. QSL via HS1CKC.

J3, GRENADA. Harry, W8KKF, will be active as J37K in the 10 meter contest December 12th and 13th. Also, look for him Thursday and Friday before the contest and Monday afterwards. Operations will be SSB only, and he will QSY to other bands on request outside contest for those who need J3 for significant awards. Harry states that Thursday will be the most likely time for late evening QSOs. QSL to W8KKF with SASE.

JY, JORDAN. "The 59(9) DXReport" states Pete, N3FNE, has been active as JY9NE for the past year and is using the JY bureau for QSLing. He now requests cards be sent to his home callsign N3FNE. Pete's activity is on 40-2 meters until the summer of 2000.

KP1, NAVASSA ISLAND. The preparations for the N1V activity seems to be going very slow. "The 59(9) DX Report" states that they could not obtain new information from the organizer K8RF. Last rumours reported states they were waiting for an official scientific report to receive the final decision to land on the island.

KP2, U.S. VIRGIN ISLAND. Slavek, OK1TN, continues to be active as KP1AD until December 20. During the past week he was heard mainly on the WARC bands and 160 meters. Check 24900 kHz around 1330-1500z, 18071 kHz after 1500z, 10106 kHz at 2100 and 0545z; and 1813 kHz at 0145z. QSL via Czech DX Foundation, OKDXF, Box 73, Bradlec 293 06 Mlada Boleslav, Czech Republic.

NEW PREFIX SERIES FOR DUTCH AMATEURS. Andre, PA0JR, from VRZA (Dutch Society of Radio-Amateurs), informs OPDX that licensed radio amateurs in The Netherlands will be allowed to choose their own callsign. Therefore, the Dutch Administration has opened up new prefix blocks. From mid-December 1998, you can expect the following prefixes on the amateur radio bands:
HF-licenses: PA1 up to PA0; and PB1 up to PB0
VHF-licenses: PE1 up to PE0
Novice-licenses: PD1, 2, 3, 4, 5 and PD0.
The callsigns of these prefixes have a two or a three letter suffix. The above prefixes with the figure '6' are reserved for special event amateur radio stations. They will have one, two or three letters as a suffix.

P4, ARUBA. Martin, VE3MR, will be active as P49M from here until next year (April 20). His activity will be mainly 12 and 17 meters SSB. QSL via VE3MR, or if you don't wish to wait until Martin returns home, send direct to: M. Rosenthal, P.O. Box 4069, Noord, Aruba.

PX, BRAZIL. Alex, PY1KS, will be active in the ARRL 10 Meters DX Contest using the special callsign PX1I on SSB and CW. QSL via PY1KS Bureau or direct.

QSL NEWS AND INFO.....
Juan, CO8TW, who was active in the CQWW CW Contest and the ARRL 160 Meters CW Contest states to QSL via direct or via his QSL Manager:
Juan Carlos Veranes, CO8TW Joe L. Arcure, W3HNK QSL Manager
Po Box 8 Po Box 73
Santiago De Cuba Edgemont, PA 19028
CP 90100, CUBA. USA.
E-mail co8tw@co9nla.uo.edu.cu E-mail w3hnk@aol.com
His logs will be available on the NFDXA's Web site at:
http://db-sales.com/nfdxa/logs/logs.html

Zoli, HA5PP, reports that Eritrean photos (E30HA, E30GA...) are on his WEB home page at: http://www.extra.hu/ha5pp/e30ha.GIF

JT, K7CO, states that his K7CO/6Y5 logs are on-line now at:
http://www.vcr.com/6y5
He also mentions that the 6Y2A (CQWW CW Contest operation) will have a WEB site soon at: http://www.vcr.com/6y2a

RARE DC MULTIPLIER IN THE 10 METER CONTEST. Look for the Potomac Valley Radio Club (PVRC) to again activate K3VOA for the rare District of Columbia [DC] multiplier in the ARRL 10 Meter Contest, December 12-13th (Thanks to the hospitality of the Voice of America Amateur Radio Club).

The multi-operator team (W3LEO, K3IXD, N3NT, K3DNE, and W6HZW) will be active on both CW and SSB. QSLs for this contest only go to W3LEO, CBA, SASE please.

SAD NEWS. It has been reported in a ARRL W1AW Bulletin (ARLB104) that Mary Lou Brown, NM7M, ARRL Northwestern Division Director, suffered a heart attack and passed away at the LAX Airport, Los Angeles, CA, on the way back from the recent VK9LX Lord Howe Island DXpedition. OPDX would like to send our condolences to her family. OPDX InterNet Subscribers will receive ARLB104 as an additional bulletin.

SPECIAL PLEAD TO DXPEDITIONS. OPDX received the following from a station in Africa (Please pass the word!): "I have noticed more and more that a number of DX expeditions will give times for North America, and South America, Japan, Europe and Asia. But what happened to Africa? We are still here, be nice if they took a stand by from time to time for Africa."

SV/A, MT. ATHOS. Monk Apollo, SV2ASP/A, has been showing up on 10 meters lately. This past weekend he was on 28485 kHz listening up 5 kHz between 1330 and 1430z.

TN, CONGO. YL Hazel, TN7OT, was active this past week on a European DX net on 14243 kHz around 0600z. Her signal was reported to be very good from Northeastern Ohio during this time. She has also been reported on the 14252 DX net around 2000z. Also, check the net at 21355 kHz around the same time.

TP50, FRANCE (Special Event). To celebrate the 50th anniversary of the Council of Europe, the club station TP2CE, located in Strasbourg, will be using the callsign TP50CE from January 15th (at 1700z) to January 17th (at 1200z). The club will be active on 80-10 meters SSB and CW. QSL via F6FQK.

UA0, RUSSIA ASIATIC (Zone 18). Look for Yuri, UA0SJ, to be active in the 1998 TARA RTTY Sprint Contest and the ARRL 10 Meter Contest. QSL direct only via: Yuri A. Maltsev, P.O. Box 2304, Bratsk-city, 665700, Russia /Asiatic/.

VP8, FALKLANS ISLANDS. Jan, K4QD, reports that his VP8CRB operation is on schedule from Port Stanley, Falkland Islands. Activity will be between December 26th and January 12th (1999). Efforts will be made to operate bands and modes needed by most hams. Special efforts will be made to contact geographical areas where the Falklands are needed. Jan reports the following:
Low Band: Permission has been secured to use two 150 foot towers spaced 250 feet apart on a hill overlooking Port Stanley for low band antennas. A 130 foot vertical with elevated radials is being erected between them for 160 meters. The 80-40 meter Radio Works Super Loop antenna used quite effectively on Kermadec will also be placed between the towers. A portable trailer and power have been secured for our use at this site.

WARC Bands: WARC band antennas are being taken and a concentrated effort
will be made on WARC bands as well as ten meters which has
not been operated recently from the Falklands.

RTTY: Significant RTTY operation is planned including the ARRL RTTY
Roundup. The special call VP8TTY will be used on RTTY.

Jan also mentions that the logs will be available online during the
DXpedition courtesy of Dave/NO4J and the North Florida DX Association.
Exact location will be posted on the internet DX Reflectors. QSL via K4QD,
Jan Heise, 8595 Sheridan Rd, W. Melbourne, FL 32904, USA, (or via Bureau).

XZ1N UPDATE (by Dick, N6FF). The XZ1N group are currently in the process
of dismantling two of the stations (ed. As this bulletin was being
prepared). They will have 3 stations left for the duration. They will
be concentrating on 10/12 meters with the C3 antenna for the next few
days, from 2300z to 1600z. The 160 meters station will be active again
once all the contesting is done. Also, look for them to spend time on
the other bands (30/40/80 meters). They have worked around 33,000 QSOs
so far, with 500-600 on RTTY.

ZL9CI, AUCKLAND ISLANDS. A press release from Lee, ZL2AL, indicates that
it there are only 4 weeks to go before the excitement of ZL9CI activity
begins. Some of the equipment has arrived in New Zealand for packing and
checking, and more gear will arrive over the next few weeks. Two of the
operators have regretfully announced that they will be unable to make the
trip due to "health reasons" and "unfortunate timings business pressures"
(ops Ron/ZL2TT and MikeN6MZ). Two new team members will join the group for
the trip South: Trey Garlough, N5KO, and Wilbert Knol, ZL2BSJ. Both of
these new operators are excellent CW men! For more details and updates
check the WEB page: http://www.qsl.net/zl9ci/
OPDX InterNet Subscribers will receive the complete press release by
Lee/ZL2AL as an additional bulletin.

SB DX @ WW $OPDX.386.1
OPDX Special Bulletin No. 386.1

The Ohio/Penn Dx PacketCluster
Special DX Bulletin No. 386.1
BID: $OPDX.386.1
December 7, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX
Association, Ohio/Penn PacketCluster Network, Andrew/GI0NWG and
Jeffrey/WA6KBL for the following special DX information.

OOOPPPSSS!!!! (ed. And it wasn't even our mistake this time.) In OPDX.386,
under the heading:

> ZL9CI, AUCKLAND ISLANDS. A press release from Lee, ZL2AL, indicates
> that it there are only 4 weeks to go before the excitement of ZL9CI
> activity begins.

The heading of Auckland Island was incorrect but in fact should have
read Campbell Island. OPDX was informed that the original press release
which was sent out erroneously said Auckland Island. Sorry, we did not
pick up on the mistake.....

OOOOPSSS AGAIN!!! (ed. This time it was my mistake!) In OPDX.386, under
the heading:

> KP2, U.S. VIRGIN ISLAND. Slavek, OK1TN, continues to be active as KP1AD

Slavek's callsign from the U.S. Virgin Island should have read KP2AD not
KP1AD. Sorry for the scare. We are sure many wished it was KP1......

-=-=-=

Many thanks to the hundreds of emails of encouragement and praise for this dxpedition and these bulletins.

The 2 operators on Amsterdam Island have logged more than 16,000 QSOs in their logs so far. The pileups are still huge so they are concentrating on the main bands and modes. They have assembled the WARC antenna on the ground and it will go up in a few days, depending on the winds and weather. They announced that they will not operate on RTTY until at least the 15th Dec. They received my FAX and have been operating more CW and listening above .025 in many cases. They will listen for S. America during the right times. They were heard on 75m phone in California around 1530Z by many many stations but they apparently had high noise levels because they did not hear most of the replies. We will pass the message to them to try to stay on 75m ssb until at least 1545Z for the greyline in N. Calif, Oregon, Washington,and VE7.

The solar propagation will become worse for about a week, so we will advise them to concentrate on 17m and below for this week. The noise level today in N. Calif. prevented contacts on both 10m and 15m.

They have just finished erecting the 17m/12m beam and are on 17m right now. They were S-9+ in EU. The pileup in NA is huge and the deliberate QRM is also terrible. We will be taking actions to cathc these people.

They have announced that they will begin operation on 160m tomorrow, 7 Dec. No idea of the times.

Important: since they have not put up their 30m antenna yet, the person signing their call is clearly a pirate so don't QSL it. Either a bulletin from me or a message from Gil will announce when they begin on 30m.

They ask the DX community to understand that they are on a very small scientific and military base with a fixed meal schedule. They must QRT at about 1400Z or they will not eat. They do not have their own food or any cooking facilities, so please don't criticize them.

For those that asked, there are no recommended or planned frequencies, except for 40m SSB to the N and S America.

They will operate a bit on 6m as well, beginning in a few days.

Please pass along this bulletin to your DX cluster. I was surprised that the ARRL DX bulletin did not have a mention of Amsterdam Isl.

73s, Jeffrey Pawlan, WA6KBL

3983. New - Active Beacon Wizard ++

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-07 00:00:00 UTC
From: James Lee Tabor <ku5s@wtrt.net>
Message-ID: <366C5695.1EE4A936@wtrt.net>
Source record: 26692

Seasons Greetings,

For several months we have provided a download able software applet called Active Beacon Wizard ++, or ABW++.

We are please to offer a new version of ABW++, here is a brief description.

ABW++ displays the currently active NCDXF beacon over a topographic map, along with the solar terminator. Tools for setting the system clock, via the net, are also provided.

ABW++ will download and display selected Space Environment Center (SEC) solar reports and forecasts. In addition, ABW++ provides the comprehensive SEC glossary of solar terrestrial terms. This glossary, along with report explanations, is provided in windows-help-file format and may be of use when interpreting the propagation reports and forecasts.

The new version adds 9 more SEC reports (totaling 14) along with an enhanced help file and other improvements.

We realize you are very busy but, if possible, your comments will be appreciated. We think it's a great enhancement to our line of HamTools and a good value. Please don't hesitate to point out any short comings. :-)

Look for the "Active Beacon Wizard ++" link at the URL below.

73 & Good DX,
Jim, KU5S

Doug,

I don't have any reason to believe that the 75 mHz band would end up in
the ARS. It would probably end up on the auction block since it's in a
desirable part of the VHF spectrum. I would hope that we might have a
shot at it however...

Hi Don,

There is no substitute for actual operating.

If you have trouble copying someone because of cw speed . Just call them and send QRS 5WPM and they will comply if they wish to QSO.

If you can copy the call sign - even after they send it many times you should be able to have a brief QSO.

Many brief QSO's add up to experience on the air.

This is all you need.

Any Ham worth talking to will be patient. They have been over the same learning curve!

Don't be shy, just do it!!

The worst thing that can happen is many repeats- with some patience you will succeed!!

In article <366BF432.CBF9CFF4@juno.com>, w9juc@juno.com says...

> There is no substitute for actual operating.

Quite true.

> If you have trouble copying someone because of cw speed . Just call them
> and send QRS 5WPM and they will comply if they wish to QSO.

Most will do this. There are some who will not - in that case,
just call it an experience, change freqs and continue on with someone who
will.

> Many brief QSO's add up to experience on the air.

Yes...and no. The way to get faster is to try a QSO with someone
who is *just* a little faster than you can copy. Then do that the next
day. Then the next. Then the next...get the picture? Push yourself and
it will improve.
The other thing to remember is that you will feel like a doofus
for some time. As long as you are not happy with your CW speed, and push
to improve, you will fell like a doofus. BUT...you will be an improving
doofus, and that makes quite a bit of difference.

> Any Ham worth talking to will be patient. They have been over the same
> learning curve!

That is exactly right. I am embarassed at my (in)ability almost
every time I QSO (especially 40 meters at night!). However, only two or
three of 100 have not slowed down. Don't give up.

> Don't be shy, just do it!!

Exactly so. Or, as the Russians would say, "Tak tochna."

I second that. There's a group of folks in your country that have a whole lot of fun with amateur radio and with building, the G-QRP Club. I heartily recommend you get in touch with them. Start with George, G3RJV. His email address is g3rvj@gqrp.demon.co.uk, telephone 01706-31812. He's located in Rochdale, near Manchester.

The G-QRP Club actually has members all over the world, and its excellent magazine, Sprat, is always full of good projects of all levels of complexity. I highly recommend it to anyone interested in QRP, building, or both.

I built the Ramsey 2M kit a couple years ago. Works OK for a
simple rig. The feeling you get when it works is quite fantastic.
I could kerchunk a repeater, but didn't get anyone to get back
to me. I had thrown in a 'dip switch' just to set frequency easily
while I jack around, and started flipping through frequecies.
I tried 52 and it was dead, then went to switch to something
else, and got someone by accident. Once I figured out what
the frequency was (it was wierd simplex) I called out and the
guys came back to me. Turned out he had a HUGE beam,
and was trying to work someone about 15 miles from me. He
was over 60 miles away. Anyway, the three of us chatted for
about an hour, a lot about the kit.

Normal contacts aren't that much fun.

PROPAGATION - by AD5Q HOUSTON, TEXAS -- DECEMBER 1998

November brought us the finest solar conditions to date in the new cycle. Best of all, this occurred on the weekend of the CQWW CW Contest. The flux approached 170 with quiet geomagnetic conditions, and all bands played well except 160. This more than makes up for the low solar activity we found in the SSB portion of the contest. This time, the 10 Meter window to Europe was in excellent shape.

The really high latitude countries were mostly available in the early morning. 10 does close shortly after sunset - just as the band opens for us. The polar region is mostly dark, and we can expect these paths to be difficult on 10 this late in the season. The higher flux does keep them open on 15, and the DX continued to run past noon at good rates. After dark on our end, high latitude openings to Asia can be found just before the band closes. Predictably, these opportunities are better on 15 than on 10.

As night falls over Europe, the MUF along the path drops and the opening moves to lower frequencies. 20 closes up later in the evening, but in the early evening DX paths are open from the northwest around to the southern hemisphere (where 20 is open all night). This is also the way the band closes: from the northwest around to the south. In the early evening we get an opening deep into Asia, and Europe gets an opening to North America in their evening. When the MUF across the Atlantic drops below 14 MHz, propagation begins to peak on 40.

Though 80 & 160 are at their best at the bottom of the sunspot cycle, the MUF on 40 drops below 7 MHz in the winter. Europe works North America in the evening, and in the morning after sunrise. With the higher solar flux, 40 is open to Europe all night - as it was in the contest. It is now the optimum night band. Areas closer to the polar night (e.g. Scandinavia) are workable well past midnight. They call it morning, but the sun is still low in the sky at northern latitudes - extending the lowband opening into the darkness.

20 is not the optimum band for either day or night paths, but works well in the late afternoon, early evening, and morning. You work into other areas of the northern hemisphere that is in these time periods, or into and across the southern hemisphere where the band never closes. It is a good idea to check the morning long path several times per week, because there really is a lot of exotic activity on the band regularly.

Some time ago, ten or so years ago, a fairly new amateur asked me much the same question.
I answered him by suggesting that he put away his vhf radios and go back to operation hf for a little while. The when he got back to hf for a few months he could pull out his vhf radios but to put more emphasis on hf then vhf.
In my opinion, you can learn more about the 'essance' of amateur radio on hf than you can on vhf.

Easier said than done. Many are limited as to what they can put up in regards
to HF antennas. After listening for awhile, they'd probably be bored with HF
anyway.

Can anyone ID these two LOWFER (1750 meter) beacons
I am receiving in Austin, Texas:

A. 174.5 KHZ sends "D" every 10 seconds.
Heard 24hrs a day.
Every third "D" preceded (2 seconds) by an "E".
"Hiccups" about every 5 minutes, then returns to normal sending.
Good sigs here in Austin.
This is not "D" in Iowa (175 KC).

B. 189.7 KHZ sends "TEXAS AGGIES" about 7-10 WPM.
Copied 1 PM 10 December 1998, QSB down into noise 2PM.
QSB back up at 2:30 PM.

Good .wav files of these emailed on request (big).

Thanks and 73 DE Dave Stinson AB5S

4019. FT5ZH -- What a Mess

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-10 00:00:00 UTC
From: Tom Branch <k4nr@earthlink.net>
Message-ID: <74q18b$c77$1@birch.prod.itd.earthlink.net>
Source record: 26723

Greetings,

I just spent the past several days listening to the mess around the FT5ZH dx-pedition. It amazes me. He's trying to work a specific station and several others just keep calling--does anyone listen to the DX station? It got so bad the FT5ZH operator told the pile up that if he did not work the station he was trying to on the next call, he was going QRT.

Every third caller asked if he was in the log on some other band/mode or wanted him to QSY to the band/mode they needed him on. This really irritated the operator who then went into a 5 minutes discussion on the finer aspects of their operation.

The DX Police have been really bad as of late, UP UP UP LID LID LID--the lids have been even worse. Tuning on the DX station's transmit frequency. When I finally worked him I had a 15 over 9 carrier on the DX station's transmit frequency as some lid tuned up his amplifier--good thing the FT5ZH operator was persistent.

I also listened to the TL5A operators--he did not even bother to respond to questions. Just worked the DX and ignored the lids.

Noted the T88II group who was calling "up 2" on CW, but was working stations up 4. This guy would work some up 2 and then quickly call "up 4" or "up 6" and work the handful who were actually listening.

4020. O-QRP Contest

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-10 00:00:00 UTC
From: mike.mhe@t-online.de
Message-ID: <74pbnv$24s$5@news01.btx.dtag.de>
Source record: 26724

Invitation to 5th ORIGINAL-QRP-CONTEST

QRP-Contest-Community (qrpcc) 6-Dec-98
c/o Dr. Hartmut Weber, DJ7ST
Schlesierweg 13 PR: DJ7ST @ DB0ABZ
D-38228 SALZGITTER Phone: 05341-50113

The QRP-Contest-Community (qrpcc) cordially is inviting to

O R I G I N A L - Q R P - C O N T E S T s

Participants: Operators of original QRP rig, commercial or homebrew,
including industrial QRP rig exceeding 5w output like
QRP Plus, FT-7 and QRP versions of QRO-transceivers like
TS-130 V, FT-707S etc.
Stations with QRO-equipment (>20W out) temporarily tuned down
to QRP will be listed as 'non Original'checklog.

Date: 26/27-Dec-98 (1st weekend after Christmas Day).
03/04-Jul-99 (1st weekend in July)

Time: Saturday 1500 UTC till Sunday 1500 UTC,
rest period of 9 hours minimum in one or two parts.

Frequencies: CW segments of the 80-, 40-, and 20m band.

Call: CQ OQRP (Original QRP)

Categories: V L P (1W out or 2W in) Q R P (5W out or 10W in)
M P (20W out or 40W in) no QRO-category

Operation: Single-op CW. Various TX or TRX may be operated, but only one
at the same time.

Exchange: RST, serial-no./ category e.g. 559001/VLP. No series reports.

QSO-Points: The log checker counts 4 points for a qso with another
contest station whose log has come in.
All other QSO count 1 point.
Exchange of RST is sufficient with stations not in contest.

Multiplier: The log checker will count 2 multiplier points for each
DXCC-country from a qso with a station whose log has come in.
Otherwise each DXCC-country counts 1 multiplier point.

Final score: Sum of QSO-points multiplied by the sum of multiplier-points.
(Calculated by the log checker. Don't try an own calculation:
you can't foresee who will send his log and who will not).

So every log is welcome and important, even just 3 QSO on a picture postcard

---

Logs: List QSO sorted bandwise, please. Add the DXCC prefix if you
claim a multiplier for a QSO.

Summary sheet: must show name, address, callsign and minimum rest periods.
Indicate the types of all TX/TRX used with out- or input on
each band according to manufacturer or measured under
contest conditions. Homebrew rigs description should name
pa-transistor/tube and possibly a reference (e.g. SPRAT No.)

Deadline: 31-Jan / 31-Jul to:
Dr. Hartmut Weber, DJ7ST, Schlesierweg 13, D-38228 SALZGITTER

- - - - - - - - -

The contest idea is to promote creative or unconventional hamming like
homebrewing or just doing it without the 'luxury' QRO equipment from time
to time.

This event more than other contests has a meeting character. The result
lists show that many operators have an original QRP rig for one band only
and so are taking part single band with just a couple of qso and without
the intention of high scoring or even winning.
So please send your log even if you did or wanted to do only a few qso.

Many of you will have family commitments at 26/27-Dec and limited time
for QRP, but more and more YL/OM will be glad at least to be in contact
with QRP friends at Christmas...

If you don't know us yet:

The QRP-Contest-Community (qrpcc) is a supra-national network of qrp
enthusiasts (at present more than 160 promoters from 12 nations) pursuing
the organization and promotion of QRP Contests succesfully since 1992.

The qrpcc may be viewed as a support group taking care of the qrp'ers
interests in a self-help manner.
Since 1996 the qrpcc carries out the ORIGINAL-QRP-Contest, designed for
genuine QRP gear.
The Homebrew & Oldtime-Equipment- Party since 1997 also has been organized
by qrpcc.

Because of its international design qrpcc does not seek any affiliation with
national ham radio organizations but is open to any friendly cooperation.

The promoters of qrpcc are supporting the idea by personal participation in
organizing, log-checking, printing address labels etc. or by contributing to
postage costs. You are welcome!

p.t.o.

Thank you very much in advance and best 73/2 de "Hal", Hartmut, DJ7ST

(and thanks for a short feedback, if you read out this mail)

4022. Question: Farnsworth and the Code Exam

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-11 00:00:00 UTC
From: dgware@voicenet.com
Message-ID: <3670a29f.2273675@netnews.voicenet.com>
Source record: 26726

I should probably ask this on the MISC group but that's such a circus.
I'd get more idiot responses than real.

I'm learning the code and about ready for the test. Probably Novice.
I've been learning using the Farnsworth method which has been great
for me. The W1AW slow code broadcasts are in this format.

Among other sources, I'm using a program called Super Morse which is
pretty good. When I listen to code from there at a straight 5 WPM I
can hardly copy it. I seem to need that dead time for processing each
character.

*** SO ***. According to "Now You're Talking" the examiner can send
the code using either method.

I could be up a creek without a paddle, or a bug.

Can I request Farnsworth or what do you think my options are ?

Thanks, 73 Don

This is the reason CW is my preferred mode. It takes some skill and weeds out a lot of the lids. Any bozo can grab a microphone and incessantly shout his call at some DX station. I also ran into this with BQ9P. I got absolutely sick of listening to the foul mouthed antics on SSB. Fortunately I found and worked them on CW on the third call. XZ1N was another case. It seems that the operator was somewhat less than skilled at handling the DX end of the pileup and the SSB lids let him know it. I was glad that he was there putting a rare country on the air regardless of his skill. So unless the SSB lids are spending their money and time activating a rare country, SHUT UP! If the FCC monitored these antics, I think they would reconsider allowing us as much spectrum as we presently have, let alone continuing the Amateur service at all.

Another selling point for no-code licenses, huh?

Remember it's a HOBBY. Lighten up!

73,
Tom N2CU

I agree completely, Tom. We all put up with enough stress and disorder in our daily lives with work and family problems, and ham radio is supposed to be fun. Why fight it? CW is FUN, and operators have much more class (no pun intended) and courtesy.

>Fortunately I found and worked them on CW on the third call. XZ1N

I worked VK0IR on the first call on 30M. It always amazes me to hear a huge pileup on SSB for Cuba or Aruba, nobody even bothers on CW.

>If the FCC monitored these
>antics, I think they would reconsider allowing us as much spectrum as we
>presently have, let alone continuing the Amateur service at all.

That's the part which is damaging to us all. We need more DX stations who refuse to put up with the SSB antics--QSY to CW and/or RTTY, let those SSB-ers find out how to connect something other than a mic to their radios!

I would imagine that most examiners use Farnsworth code so you don't need to worry much about it. But call the VEs who will be administering the test ahead of time and ask how they do it. If you don't like their way, find another test session that does use Farnsworth code and take the test there.

You're on the right track with SuperMorse - but I would recommend you skip the 5 wpm test completely and just go to 13 wpm - there's no comparison between the code you hear at 5 wpm and that at 13 wpm, and you'll find yourself learning it all over again when you get up around 10 wpm.

I went from no code to 13 wpm in about 6 weeks, practicing twice a day for 20 or 30 minutes. The method I used is called the "Koch Method" and involves starting with a pair of letters, sent randomly at full speed (15 wpm in my case) for 5 minutes. You copy those two until you get 90% correct copy, then add another letter and do it all over again. You're learning the code at full speed, and you only move on when you've mastered all the letters you're currently working on. You get to where you're copying the code instinctively (you hear a letter and your pencil writes it down) rather than going through a translation in your head - "dah di dah dah... Let's see... That's a 'Y'..." The method was developed back during one of the big wars but there was no good way to carry it out since computers didn't exist - SuperMorse is excellent for implementing the Koch Method.

If you go to http://altavista.digital.com and do a search on "Koch Method" you should turn up a number of sites that have an excellent article explaining more about it and how to implement it in SuperMorse.

Good luck!

Check with the local VE groups and find out which they use. Most
ARRL VE teams seem to use Farnsworth Code on the test, most
W5YI VE teams seem to use standard Morse Code. So ask ahead
of the exam date. If there are several VE teams in the area, keep
asking until you find one using the code that you've learned.

Hi Guys,

My .02US:

Absolutely agree that Don should shoot for 13 wpm as it is quite obtainable, especially given the nature of the tests these days (7/10 multiple guess...). Besides if you plan on operating CW at all (and if you aren't you may be surprised how much fun it is, especially past 13 wpm), you really need to get your speed up to something reasonable. Passing the 13 wpm test will give you an effective speed about 9-11 wpm on the air, especially if you're used to Farnsworth.

WRT Koch method, I have used it and it is quite useful. However, to add to what Marty was saying, its efficiency is diminishing as he has described it, that is if you keep tacking on letters as you learn them. After you've tacked on the 10th letter, for example, and assuming you're listening to all the letters randomly, you're only hearing the new letter 10% of the time. Also, you're then spending more time on letters you already know.

I found it more useful to use the Koch method on groups of up to 8 letters, then start a new group with new letters, etc. It's also a great method for working on the letters that are toughest for you or cause interference with each other.

In general, bear in mind that no one method is going to work for any one person all the time. You will probably find that a mixture of methods will give the best results (Koch, Farnsworth, random code, QSO code, ARRL practice, etc., etc.). Nothing is probably better practice than real QSOs (where you will rarely hear Farnsworth style, btw).

Final thoughts:

Use a pen, not a pencil, less drag.

If you miss a letter LET IT GO IMMEDIATELY and listen ahead for the next (much easier said than done).

Learn to head copy asap, it just makes life easier in the long run.

Relax when listening to code, in fact sometimes just leave it on in the background while doing other tasks or just "listen" without trying to get the content. A lot sinks in by osmosis, IMHO.

Use paddles for sending, those that want you to start with a
straight key just want you to suffer like they did. ;^)

Good luck on the test and hope to see you on the bands.

In a previous article, gearing@bellsouth.net ("Robert E. Gearing II") says:

>Anyone have a QSL manager or
>address for PZ1DV?
>
>Bob Gearing
>
>
>

To my knowledge, no one has ever received a QSL from this station. I have sent him about 5 direct QSL requests with greenstamps, and have never received a reply.

Imro, PZ1DY, was a great QSLer. I haven't heard him on the air recently, though.

Try to work a different PZ - and good luck!

73, Zack W(SZ

And, I found I did better writing longhand, than printing. Still, on the air, I almost always listen by ear and type on the computer keyboard. But, I guess you can't do code this way for the tests, right?

I work both ssb and cw but i hrd somtimes much more qrm on dx on cw than on ssb-
Rememnber bq9p on 40cw with lids on his freq during more than 90mn @ s9. I never
hrd something like that b4. Guys aren t afraid to generate qrm on cw beause nobody
can recognise them. On ssb when the guy speaking u can recignize the voice -
Working much more on ssb - I always find much easier to get a qso on cw than ssb
so searching for difficulty.

New Amateur Radio Search Engine online......

There is now a dedicated Amateur Radio Search Engine for amateur operaters. It is located at http://www.surfsouth.com/~wharrell/fest

This is the Sunbelt Hamfest site and has the link to the new search engine. As the database grows it will help Amateur Operators locate Amateur relate sites easier.

Sell that surplus gear during the holidays and have more for Christmas. Send your listing to wharrell@surfsouth.com and put in Subject: Hamfest Listing

We look forward to your emails and invite you to post your page in the Search Engine.

The hamfest boneyard listing is free.

Mike and Tom,

The CW bands have not been immune to this type of stuff either. I'm primarily a CW op--can ragchew at 25 and contest at 35. I've seen a marked increase in the DX Police and the lids on CW. While not near as bad as phone, it is discouraging. The bottom of the bands used to be a place free from this kind of crap. I even heard one of the lids send "FU" after being told "UP" by one of the DX Police. Of course while this crap is going on, the rest of us can't work the DX station.....

Thanks all for the good advice.
I do intend to do CW DX'ing exclusively since I'm kind of mic-shy.

I think my plan will be:

Go for 13 WPM.
This seems attainable since 5 is actually getting boring,
my mind wanders between letters sometimes.
I can copy a lot of the WA1W 10 WPM anyway
I need to become one with the code and get rid of
the mental look-up table mentality.

Farnsworth is probably OK but if going for 13 then probably not
practical anyway. Most of what I hear on the air doesn't sound
very Farnsworth anyway.

Use a pen.

73, Don

Hey folks,

I have started a website and ISP strictly for ham operators. The idea is to get hams to help keep up a website with information updated weekly and monthly. I would like to have all the cool stuff you find on the net in one website. News, mailing lists, callsign database, if its cool I want to put it on there.

I could use someone to help keep up all different parts of the hamsnet site. Is there anyone in this n/g that would be interested in keeping up a site for QSL info and propagation reports?

I am also offering FREE E-MAIL addresses and web services for all ham operators.

Please go check out the site and get your free e-mail account
http://www.hamsnet.net

Thanks for your help

4057. Looking for F6KDF Address

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-13 00:00:00 UTC
From: btarte@cris.com
Message-ID: <btarte-1412981425000001@ts001d35.gps-mi.concentric.net>
Source record: 26612

I'm looking for the address of F6KDF,
who I understand is QSL manager for
FT5ZH. My most recent foreign callbook
is from 1993, and F6KDF isn't in there.

If anyone could e-mail me the address,
I'd appreciate it.

Thanks much.

Bob Tarte

4058. Are 14,226.5 kHz DX Nets gone?

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-13 00:00:00 UTC
From: btarte@cris.com
Message-ID: <btarte-1412981429100001@ts001d35.gps-mi.concentric.net>
Source record: 26613

I've been checking recently for both
the Butterfly DX Net around 2000 UTC
and the Family Hour DX Net around
1600 UTC, both formerly on 14,226.5 kHz,
and I haven't heard a peep out of either.

Does anyone know the status of these?
Haven't heard the Southern Cross DX Net
on this frequency either.

Is the 247 DX Net the only North American-
operated DX net left on 20m?

Please e-mail your responses, if you
would be so kind. Thanks much.

Bob Tarte

I have a license for the purpose of retrieving and reading packet messages.
This is the extent of my involvement in amateur radio.

SB DX @ WW $OPDX.387
Ohio/Penn DX Bulletin No. 387

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 387
BID: $OPDX.387
December 14, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & The GOLIST, K2KQ, K2SY, W2JGR, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, WB3JFS, N4XP, W4PJ, WA6KBL, K8YSE, DJ5AV & DX News Letter, EC1BXI, EB3GC, PFK8HC, G3SXW, G4BUE & DX News Sheet, G0ULN, IK1ZPA, JM1LJS, OZ2ELA, PS7AB, YO3FWC, YU7AL and Western Wisconsin DX Association for the following DX information.

8Q, MALDIVES. Marco, IK1ZPA, informs OPDX that he will be active from Giravaru Island, December 14-20th, as 8Q7IK. He will operate with an ICOM 7O6MKII + antenna tuner + power supply.... using an inverted-V dipoles on a fishing-rod. QSL via his home callsign: Marco Bottino, Via Priv. Terrazzi 7, 18010- Diano Castello (IM), ITALY

8Q, MALDIVES (Update/Reminder). Lee, G0ULN, will be active as 8Q7LE from the Maldives December 22nd through January 12th (1999). He will be active on SSB only on 14260 and 21260 kHz (also 10/17/40/80 meters). QSL is via the bureau or to his home callsign G0ULN.

9G, GHANA. Michael, WK6O, is currently here and is helping a Missionary friend named Sidney Barnes, 9G1TB. Michael mentions that he recently operated the CQWW CW Contest and made over 2000 QSOs on the 10 meter band using Sidney's callsign. He will soon be picking up his own callsign from the Ghanaian Radio Frequency Board in Accra which will be 9G5MG. The G.R.F. Board has given Michael permission in the mean time to use Sidney's callsign while waiting. He plans to do more CW operating before he returns back to California in January. All QSLs for 9G1TB and 9G5MG should go to WK6O. Please, do not send cards to Sidney/9G1TB via the Ghanaian QSL bureau, nor via Sid's home address. Only QSL via WK6O to have cards verified and confirmed. Address is: Michael W. Gaude, 18642 Oak Ridge DR., Santa Ana, CA 92705 U.S.A.

ANTARCTICA ACTIVITY......
Sarah, KC4AAD, is active from Siple Dome, Antarctica a few nights a

week with her QSL Manager Bob, K4MZU. They can be found on 14270 kHz after 0100z. Sarah's signal is pretty week since she is only running about 100 watts and a dipole. QSL to K4MZU.

Oleg, UA1PBA, is active as R1ANF from the club station at Bellingshausen Base for one year on King George Island. His activity this past weekend was on 30 meters between 0200 and 0400z. Also, check 20 meters CW starting around 2330z. QSL via RK1PWA.

A3, TONGA. Lee, A35VR (ex-VP2VE, 3D2VA, K3RGD), is now active from the QTH of Paul, A35RK. He has been very busy on 10 meters CW (28025 kHz). He has also been heard on 12 and 30 meters. Lee will be there until February, 1999.

EF1, TOXA ISLAND (Spain). Look for special station EF1IAT to be active until December 31st (1998). The Spanish islands reference is IDEA EA1-1-5. It is located in the IOTA group EU-080. The station will be active for the USA on 21.200 Mhz about 1800z. You can take a look at the color QSL (an aerial picture of the island) which is available at the following WEB URL: http://www.radioaficion.com/EF1IAT/
QSL ONLY via direct to expedition QSL Manager EC1BXI (via callbook) or via Jorge Fernandez Devesa, PO Box 54, 36980 O Grove (PONTEVEDRA), Spain, Europe.

FT5ZH, AMSTERDAM ISLAND DXPEDITION (Excerpts from a WA6KBL press release). Eric/F5SIH and Mehdi/F5PFP on Amsterdam Island continue to be very active. The pile-ups are still huge, so they are concentrating on the main bands and modes. They have reportedly assembled their WARC antenna and are active on those bands. They have announced that they have begun RTTY operations. They ask the DX community to understand that they are on a very small scientific and military base with a fixed meal schedule. They must QRT at about 1400z, or they will not eat. They do not have their own food or any cooking facilities, so please don't criticize them. OPDX InterNet Subscribers will receive complete copies of the press releases as an additional bulletin.

HD6DX COTOPAXI DXPEDITION. HC DX Group informs OPDX that they will be active December 19th (beginning 1100z) until 1500z December 20th, from the "Snow-White Volcano Cotopaxi" (Highest inactive volcano in the world 5.897 mts.) in the Republic of Ecuador. A group of 10 operators will be active on 40/20/15/10 meters. QSL via HC6DC. (TNX to Hector Espinosa)

OX, GREENLAND. By the time you read this Michael, OZ2ELA, will be active from Qaqatoq in the southwest part of Greenland until December 16th, as OX3LG. His activity will be on 10/15/20/40 meters. QSL via OZ2ELA: Michael Jensen, Kanalens Kvt. 6, 2620, Albertslund, Denmark. Also, look for Olso OX3UB, to be active from the same radio during the same time period. QSL via OZ1GER.

PV5/PW5, PAZ ISLAND. By the time you read this, the short operation from this Brazilian island will be active and will only last until December 14th. Look for PV5V (on SSB) and PW5W (on CW) to be active on 80-10 meters.

Also, look for them on the IOTA frequencies and the Brazil DX Net. This island has the following reference numbers: DIB-63, DFB-SC 01 and IOTA SA-027. QSL via PP5LL (direct or Bureau).

QSL INFO AND NEWS.....
QSLs for WH7/K9NW (Hawaii) are via WW9DX (Western Wisconsin DX Association) direct or via the bureau is "OK". The direct address is: WWDXA, PO Box 411, La Crosse, Wisconsin 54602 (WWDXA states, "It seems to be taking forever to have this updated at the FCC... And, yes, we WILL get caught up on the '97 contacts as well. Please no second requests.") Thanks! 73, WWDXA

J3A QSLS. Don, K2KQ, reports that he has been receiving QSLs for J3A, both SSB and CW. ALL QSLs for J3A, both CW and SSB go to WA8LOW. Under no circumstances send QSLs to K2KQ. Your response will be delayed if you do, as Don will collect them and send them to WA8LOW. Don also states that QSLs for the CW operation will be a picture QSL card. They have not been designed yet. Be patient!

NEW QSL MANAGER. Paolo, IK2QPR, has been reported to be the new QSL Manager for UA0YAY who is operating from Zone 23.

5V7A QSLS. Roger, G3SXW, reports that the 5V7A operation netted nearly 16,000 QSOs. QSL cards are being printed now and will start to flow before Christmas. The QSL Manager is GM4FDM: Tom Wylie, 3 King's Crescent, Elderslie, Renfrewshire, PA5 9AD, Scotland or via bureau. Their special E-mail request system for bureau reply is very popular. Please access the QSL request form on their Web site at:
http://voodudes.com
Or E-mail QSL requests to 5v7a@voodudes.com. Note that 5V7A cards are NOT via G3SXW, and that personal 5V7 and 9G5 cards go only to home callsigns as published.

Franck, FK8HC, was active in the ARRL 10 Meters Contest this past weekend. QSL via VK4FW or direct to: Franck Petitjean, P.O. Box 7636 Ducos, 98801 Noumea, New Caledonia.

BQ9P LOGS ARE NOW ON THE WEB! Go to: http://www.qsl.net/bq9p

Tom, N4XP, has announced that as of Tuesday, December 8th, all KH9 (Feb 1998) and ZK1XXP QSLs received direct have been mailed with the exception of those received at WA4YBV in the past 7 to 10 days. If you have not received your card(s) and it does not arrive in the next week, contact Tom via E-mail (n4xp@juno.com), and he will be glad to research the contact. Bureau cards will be processed after a short pause.

The QSL route for station EC1BXI in the CQ WW SSB Contest and 10m ARRL Contest is via G4RRA (Bureau) or Callbook (if via direct).

SAD NEWS. It has been reported that Robert Dow, WB2CJL, one of the editors of the VK2SG RTTY DX Notes, has become a "Silent Key" due to a heart attack during the last weekend in November. He was 68 years old. Robert

reportedly issued his last RTDX Bulletin on November 19th. His signature motto at the end of each bulletin was "REMEMBER, DX DON'T SLEEP." OPDX would like to send our condolences to the family.

SPECIAL EVENT. The General Secretary of Yugoslav Amateur Radio Union, Mr. Srecko Moric, YU1DX, announces that six stations in Yugoslavia will be active to celebrate 800 years of the Hilandar monastery on Mount Athos. Look for the following stations with the special prefixes:
4N800H - Hilandar monastery (HQ station) YU800G - Gracanica monastery
YT800FG - Monasteries on Fruska Gora YZ800R - Ravanica monastery
YZ800MO - Ostrog monastery , YU800S - Studenica monastery
A YU-SV team is trying to get a licence to work from Mount Athos. Stations are active now until March 31, 1999. Activity will be on all modes including RTTY, on all HF and VHF bands. Stations will also be active during contest. All QSLs go to YU0SRJ (P.O.BOX 48, 11000 Beograd) or via bureau.

SPECIAL EVENT. On December 19th and 20th, the Catalonian Ham Radio Union and the Television of Catalonia will put on the air the very special callsign EG3TVC. The station's activity will be on the air during this year's 7th Marathon devoted to collect funds for the scientific study of Diabetes. For more information, please check the following WEB sites:
http://www.urc.es/eg3tvc.htm
http://www.fundaciomaratotv3.org
http://www.tvc.es/marato

T8, BELAU. Look for Hiro/JF1OCQ and Tatsu/JA0QBY to be active from Palau Island December 19-22nd, as T88HM and T88TN respectively. They will be operational on all HF bands and 6 meters SSB/CW. QSL infomation is as follows:
T88HM - Hiro C Miyake, 1-3-6, Asakura-Cho, Maebashi-City, Gunma 371-0811, JAPAN or via bureau to JF1OCQ.

T88TN - Tatsuo Nishihara, 1458, Kihimiya, Mishima-Cho, Mishima-Gun, Niigata 940-2322, JAPAN or via bureau to JA0QBY.

UN, KAZAKHSTAN. "The 59(9) DXReport" states that Valery, UN3G, has a permit for 6 meters (CW/SSB) to run 175 watts, good until September 10, 2001.

VU, INDIA. Miku, VU2WAP, has been very active on 75 meters this past week. Activity has been between 3785 and 3795 kHz between the times of 0045 and 0200z. The East Coast stations of the U.S. report Miku has a big signal. QSL direct only via the callbook address: Manoj Agarwal, 44/1E, Fairfield Layout, Race Course Road, Bangalore, 560001, India

XT, BURKINA FASO. The "DX News Sheet" reports that Mike/F5RLE and Joel/F5AOW will be active again from February 7th to March 1st, as XT2OW and XT2DM. Mike will do the CW and Joel the SSB using an IC-706 w/100 watts, 2 element beam for 20-10 meters and a G5RV on the other bands. Look for activity on the WARC bands. QSL via F5RLE.

XU, KAMPUCHEA. The "DX News Sheet" reports that F5NRY is active as XU5NRY on RTTY. His length of stay is not known. QSL via home call.

YO DX HF CONTEST RESULTS. Ciprian, YO3FWC, informs OPDX that the final scores of the 1998 YO DX HF Contest are now available at the following WEB site: http://www.qsl.net/yo3kaa
Also available at this site are updated Romanian Ham Activities and the weekly updated YO CallBook.

assume not everybody is 'brain-dead' repeater operators..., I've met
several interesting hams, but they certainly never accept the activity
on a repeater

mailing list on 11/18/98:

--
Anyway, more cards will go out before CQ WW CW - possibly the last of the
VS6BG backlog, based on my rate so far. I will then move on to the other
calls. Those who sent cards for several of my calls with a single envelope
please remember that I can't post it until it has worked its way through
the queues for all of the calls. Everybody's patience is appreciated & in
the end will be rewarded.

4065. UA6/UA9 border?

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-14 00:00:00 UTC
From: w9wi <w9wi@bellsouth.net>
Message-ID: <36754078.716ABD48@bellsouth.net>
Source record: 26620

Can someone tell me where the border between these call areas is?
Worked several UA6s with good signals in the 10-Meter Contest, but not
one single UA9. I thought the Ural Mountains (which would make a nice
barrier for 10-meter signals..) were in the middle of UA9 territory, but
maybe not?

A non-ham friend acquired 9 GE master mobiles,and 2 bases,
all 6m with tube finals. What can I do with them,and where can
I find useful information on them? Tho owner really wants to put
these into service.(I might make one into a 6M Amateur transciever).

Great idea Don. I skipped the 5 wpm test and was very glad that i did.
5 wpm is not really useful for anything other than it can get you on the
air a bit sooner.

> Farnsworth is probably OK but if going for 13 then probably not
> practical anyway. Most of what I hear on the air doesn't sound
> very Farnsworth anyway.

True enough. Farnsworth is definitely the way to begin learning, but
you eventually have to make the transition to normal spacing. Soooo...
It doesn't pay to push the Farnsworth character speed beyong the 18-20
If you want to get to extra (mandatory for CW DX), the best strategy is
probably to use 18-20 Farnsworth from the start, and gradually increase
the overall sped until you reach 18-20 overall - thus the Farnsworth
just gets gradually phased out.

>
> Use a pen.

Use either pen or pencil. Small letters are faster than caps. If you
use pencil, go back and make corrections and fills. If you use pen,
then go back and transcribe.... after all, there is no time limit.

Best of luck. And, if you are really serious about CW, consider joining
the FISTS group.

Hope to see you on the air

The other thing I would make sure is that you're committed...if you pick up an active station, you will be kept quite busy. If you're not willing to put in the time, don't jump in, as it's difficult to 'undo'.

Also, don't assume you'll break even, be prepared to have some of your ham radio budget (albeit small amounts) go toward this effort

John Shelton, who publishes the 'GO List' runs a list of folks that are willing to be QSL managers...

Hope this helps, feel free to email me if you would like further info

OK...I need to jump in here....wasn't aware that the log search was going to be used for this purpose.

Let me set the record straight, John W2NQ is in the log SEVERAL times due to no fault of his own, he served as a pseudo-pilot station for us, and provided us with substantial propagation information, feedback from US stations, and also was the first to warn us about the 14.265 frequency issue with the FCC. The fact that he is in the log is largely my fault, I logged John every time we talked. I believe other operators did the same.

I can tell you that many benefited from John talking to the team. Heck, he kept me up for another good 15 minute opening to the east coast; I was about ready to cash in the chips, and we got ragchewing, and a W1 came ripping in. More importantly, he alerted us to some openings we were not aware of, and how strong our signals were at certain times...and other typical pilot station activities. I suspect many hams worked us because of him; I know we spent some time on 80 CW, and worked about 200 US stations in one short sitting, due to his recommendations.

If you look at the log, and trust me, I now have!, we had surprisingly low numbers of dupes. Based on what I see, most of the dupes were as much the BQ9P operator's fault as it was the dx chaser's fault. We had trouble completing many of the qso's due to the QRM, poor propagation, etc. A dx chaser has every right to dupe us if we didn't give him/her a clear indication that they were in the log. Of course, the dx chaser owns part of that responsibility to work to ensure he/she is in the log. Bottom line, most of the dupes, I suspect, were due to a concern of not being in the log.

There are a few guys that will work you every day, for whatever reason. Not sure what one can do about that, but I think they are a very small minority. Don't put W2NQ in with that crew of operators, at least based on my experience.

Steve,

I have to agree with your assessment. I tired to work BQ9P on 15 Phone as the band collapsed. You had my callsign correct and repeated it 2-3 times as you looked for a response. When you heard none, I had assume I was not in the log and try again another time. I worked one of the other ops the next day. Good thing I chose the "insurance QSO" since you did not log me when you heard no response from me.

Thanks for the new one!

Then he would start working BQ9P with other people's calls - a W8 and
others. When people would take him to task on it, he'd start a big fight
right on the frequency. It's pretty tough sometimes just living 30-40 miles
away from him.....

Thats exactly what you should do. I've received several qsl cards now with an apology for the dupe, 'because I wasn't sure I was in the log'. Better safe than sorry! I tried very hard to ensure, at the end of the QSO, both myself and the other operator were quite sure the qso was complete. However, if I could not get a 'roger', basically confirming that the callsign was correct, it didn't get logged.

I'm working with some other folks to see if we can elevate this issue to a level where people are comfortable duping when it's the right thing to do.

73 es glad we got you in the log for that new one...that is what it's all about!

What does this mean? That you don't think you can have an interesting conversation with a ham?

Then why are you posting to this newsgroup? You are a troll perhaps? Hmm?

Why do you have a license and why do you bother to put your callsign here?

Message-ID: <759mas$gm7$1@fu-berlin.de>
Source record: 26647

And in most cases it's the DX-station's fault. You gotta stick to your rules or you are asking for trouble. Split is split, no matter what happens or how loud someone on simplex may call you. It takes only one single QSO on simplex to send an invitation card to the bozos, just as much as it only takes one single QSO with a W4 when you asked for W1's.

It all boils down to experience and strongheadedness. Did you ever have problems working G3SXW, DK7PE, OH2BH, G3TXF, DJ6SI or <fill in your favorite CW-OP in here> when they were on an expedition?

Guess not. You ask for trouble and you get it. Guaranteed.

Controlling a pile-up is a critical thing. You do it, you win. You don't, you lose.

One of the reasons I resent SSB is the fact that most of the rare ones are clueless in terms of controlling the pile-up. Once it boils down to the biggest amplifiers and the largest antennas, it is for bozos to be proud of working a new one and bragging about it. In CW you encounter a higher percentage of operators capable of handling a pile-up skillfully enough to have a chance of working them without 2 kW and a 6 el Monobander. Experienced operators follow a pattern you can easily find out, if you are willing to listen and that's why I prefer CW.

Of course, that makes CW-bozos on a dexpedition much more frustrating. I remember the first Dutch expedition to 9G-Land. They had no pattern whatsoever; rumor had it they had pre-programmed their RX-VFO to switching RX-frequencies at random. Called them for 1 hour and gave up finally.

Had the same feeling with XZ1N, before the real CW-OPs arrived, made them on 2nd call then.

4096. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <75b8ps$qnt@news.Hawaii.Edu>
Source record: 26651
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.digital.misc

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6OO, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Peter, you make some valid points, but your arguments presuppose that every ham that travels to and operates from a rare country should be experienced and disciplined. What about the amateur who travels to a rare country for vacation or business and merely operates for some fun? Or are you suggesting that such casual operators should not be allowed to operate from rare countries?

To all radio amateurs

SB DX ARL ARLD050
ARLD050 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, W8MV, The Daily DX, 425DXnews, DXNL and Contest Corral from QST. Thanks to all.

MALDIVES, 8Q. Lee, G0ULN, will be QRV as 8Q7LE from December 22 to January 12 on 80 to 10 meters SSB. QSL to home call.

TONGA, A3. Lee, A35VR, is active from the QTH of Paul, A35RK. He has been very busy on 10 meter CW. He has also been heard on 12 and 30 meters. He will be here until February, 1999.

SPAIN, EA. Look for EF1IAT to be active until December 31 from Toxa Island, IOTA EU-080. QSL via EC1BXI.

MARTINIQUE, FM. Look for FM/W8MV to be QRV from December 21 to 30 on 160 to 6 meters, using primarily CW. QSL to home call.

ECUADOR, HC. 10 members of the HC DX Group will be QRV as HD6DX December 19 and 20 from the ''Snow-White Volcano'' Cotopaxi. This is the highest inactive volcano in the world. Activity is expected on 40 to 10 meters. QSL via HC6DC.

ITALY, I. Look for IU1GM to be QRV from Marconi Communications December 19 to commemorate the 100th anniversary of the first Marine Distress Signal. QSL via operator's instructions.

MINAMI TORISHIMA, JD1. Ryo, JL1KFR, is QRV as JL1KFR/JD1 until January 7. He looks for RTTY and CW QSOs especially with North America and Europe. QSL to home call.

ANTARTICA. Sarah, KC4AAD, is active from Siple Dome a few nights a week. She can be found on 14270 kHz after 0100z. QSL to K4MZU. Oleg, UA1PBA, is active for one year as R1ANF from the club station at Bellingshausen Base on King George Island. QSL via RK1PWA.

MIDWAY ISLAND, KH4. Ted, NH6YK, will be active on 6 meters, using SSB and possibly RTTY as NH4/NH6YK from December 20 to January 2. QSL to home call.

SOUTH SHETLAND ISLANDS. Dan, LZ2UU, is active in his free time as LZ0A from the Bulgarian Base on Livingston Island until the end of February 1999. Activity is on 40 to 10 meters, using mostly CW. QSL via LZ1KDP.

PALAU, T8. Look for Hiro, JF1OCQ, and Tatsu, JA0QBY, to be active from Palau Island December 19 to 22, as T88HM and T88TN respectively. They will be QRV on 160 to 10 meters and 6 meters using CW and SSB. QSL to their respective home calls.

CAMBODIA, XU. F5NRY is active as XU5NRY on RTTY. His length of stay is unknown. QSL to home call.

THIS WEEKEND ON THE RADIO. The Croatian CW Contest is on tap for this weekend. Please see December QST, page 95 for details.

During the 10m contest, I happened to stumble across a Caribbean
station operated by an experienced USA contester (who I'll not name)
just as he got REALLY frustrated by it. I think he was trying to work
a particular EU station and the rest of the pile just wouldn't shut up.
Anyway, he eventually screamed that he was fed up, and those in the pile
needed to get some manners, and that he was going QRT.

<g> I thought it was funny...

I'm not anti-European, Walter. A lot of people seem to think that
Europeans are the rudest, crudest, lousiest operators in the world.
I just happen to agree with them....

I have no problems controlling a European pileup. All my radios
have an OFF switch.

John, I am not saying that. I am merely saying that any inexperienced
operator trying to have some fun on the bands will bump into a wall of
bozos.

The inexperienced and unprepared operator will not have a lot of fun,
unless he restricts himself to SSB and joins a list (Not my idea of fun).

It's up to the operator to decide what's going on. The inexperienced
operator going to a really rare country is asking for trouble calling CQ -
and it will not be fun for him. If it's rare, everybody wants to work it.
It's his problem, not mine. I am going to call him, if he calls CQ and
asks for a pile up. If he does not want a pile up, he should switch to the
9X5HG-strategy. If that's his/her idea of fun, so be it.

My idea of fun is a pile-up. The more stations calling, the better :-)

Jim,

As an almost - not - in - Europe station (EI is about as far west as you can get), I have to agree. Having operated all over the world, the LidPile EuroCurtain is the biggest mess I have ever heard.

My best operating times are when Europe is out of it at sunrise on Top Band. Unfortunately, any other time the pack is back and nothing can worked through the 3kw eastern and southern stations, who seem not to have either a receiver or manners.

Actually, the inexperienced casual operator is unlikely to do more than
casual operating from a rare one, usually with a station that is pumping
less than ether-heating current into the air, resulting in signals which
don't prompt the big pileups that are being discussed, here.

Anyone can sit down at 4U1ITU or 1A0KM and play at being DX for an hour
or two... it takes a lot of skill, dedication, and stamina to do it day
in and day out for a week or so. And if you were Cherry when you
started, guarenteed you aren't by the end of the week!

Guys, I was lucky enough to have been DA2QQ and HL9BBN. As the German station, I had no problems. I was garden variety. But signing the infamous HL unleashed a cacaphony of nosie beyond belief. It surely was not fun and I wuickly decided I had made a big mistake even bothering to get licensed in Korea. Being onthe distant is not as much fun as it could be or should be.

A lot of what Peter said is right on the money. He may not have been DX
but I bet he would make a hell of an op. So, I agree with him
completely, because most of what he said is exactly how I ran em.

While it is easy to criticize the DX operators,
maybe some of you should look at your own operating
practices. When the DX station asks for a W4xzy and
is still being called by W8's, K2's, N0's, etc, then
who is to blame? The stations who keep calling are.
You are not making it any easier for the DX station or
the station that has been picked out of the pileup. All
you are doing is creating hate and discontent (H and D for
short). Oh by the way, make sure you throw a carrier on top
of the frequency to really screw things up.
There are a lot of lids in the pileups and you know
who you are. Maybe the DX stations should start making
a list and checking it twice.

I received my QSL from the RCMP special event station in the mail yesterday. Unfortunately there was no data on the card--not even the call.
Upon searching my log I discovered I am not a thorough logger. I think the station had a call of XM7P with QSL via VE7ARS. Could anyone confirm this?

Hi! You are correct about the QSL and the QSL information. I received my XM7P card about 3 weeks ago (I love the painting pictured on the card). You can check their online logs at http://mypage.direct.ca/f/fcarey/log.htm. I checked the log myself for your callsign and found:

Contact #912 at 1814Z on 24-MAY-1998 on 14 MHz.

I was contact #1145 at 0100Z. Looks like you might need to resend to get a corrected card.

73,
Robert, N2JTX

Hi,

I'm just starting out and got hold of a Kenwood TS120-S with remote VFO. I know what it's for but not sure about the finer points of using it. I have a manual for the radio but it includes nothing about the optional vfo. If anybody could help I'd sure appreciate it.

What I'm curious about mainly is the T-F button

It also has athe Function switch that says:
RMT-R MAIN RMT MAIN in that order.

There is also an RIT switch on both boxes.

73, Don

Gary,

the more lids in a pile up, the easier it is to work the dx - that is if the dx is sticking to its rules. Hell, let them EA7s and UY5s call the dx like madmen when the dx asked for GM3s. A good DX will work the GM3 anyway and leave the lids at their keys without a QSO.

As DX you have a wider spectre available. You say up 1 and work someone up 2; the good OPs will call you on the right frequency anyway, because they listen. The lids don't; they need Packet Cluster spots to tell them where to transmit. Fine with me.

And forget about the list thing. Any list is a time killer. And there are operators out there who can copy a full call in big pile ups. Romeo may have been an idiot, but he was one hell of a CW-operator and so is Nigel, Rudi, Bal, Roger and others.

A pileup is when a DX station calls CQ and wants to see how many hams
will kiss his ass because he is rare. He CHARGES them $2 for a QSL card and
uses the profit to fund his ham station to make more money.

tnx.........SJ

SJ --
FT5Z is Amsterdam and St Paul Islands in CQ zone 39 in the South Indian Ocean. The web page and QSL route is at URL:
http://perso.easynet.fr/~f5nod/ft5z.html

To assist in prefix ID -- download WinHdg -- By WA6FHI -- Find heading and country info from callsign prefix --- An absolute MUST SEE at URL:
http://ourworld.compuserve.com/homepages/john_jearos/homepage.htm
It is a shareware 30-day trial edition -- and well worth the shareware fee.

Or see the AC6V prefix list at URL:
http://www.ac6v.com/pageab.html

More prefix and zone info at URL:
http://www.ac6v.com/pagev.html

4147. DX Mail lists

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-20 00:00:00 UTC
From: Bill Everett <bill@halcyon.com>
Message-ID: <75jnapvuq1@brokaw.wa.com>
Source record: 26503

I used to subscribe to London's DX mailing list. When he went away I was auto subscribed to two new lists. Great! Over time I am no longer getting mail from either so would suspect I have been dropped.

Could someone forward the subscription instructions for any DX mail list they are subscribed to. I need to get going again.

Please email them to me directly.

Thanks,

Bill

SB DX @ WW $OPDX.388
Ohio/Penn DX Bulletin No. 388

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 388
BID: $OPDX.388
December 21, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2KQ, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N6RT, WA6KBL, NA7DB, KU9Z, AC0X, DJ5AV & DX News Letter, DL3DXX, F6AJA & LNDX, G4BUE & DX News Sheet, G4UZN, G0OIL, JA1ELY, LU7EC, OH2BVE, ON5NT, PS7AB, RA6CO, RA0FF, SQ9FVR, VK1TX and YB1AQS for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy Holiday and Season's Greetings". Also, we would like thank the many who have contributed information over the year (there are too many to list). REMEMBER, without them there would not be an OPDX Bulletin.

3B9, RODRIGUEZ ISLAND. "The Daily DX" reports that Frank Smith, AH0W, from the Midway-Kure DX Foundation, says that the upcoming DXpedition to Rodriguez Island is now planned for the first of April, 1999. This will be a multi-national DXpedition with operators from 5 countries. More details should be forthcoming.

4U1UN, UNITED NATIONS HQ. Don/K2KQ and Piero/IK2BHX have been keeping 4U1UN active lately. This past weekend they were active on the WARC bands, 80/160 meters and on RTTY. QSL via W6TER.

5X, UGANDA. The French DX Bulletin "LNDX" reports that F5JDG and F6BDS will be 5X1MA and 5X1LG, respectively, now until December 25th. They are there for business/work, and they will try to be active on 40/20/15/10 meters with 100 watts and dipoles.

C5, THE GAMBIA. Dave, G0OIL, informs OPDX that he hopes to be active for one week beginning January 28th (1999). His activity will be mainly on RTTY. QSL via his UK callsign, Dave White G0OIL, Rainbow Cottage, Laneham St, Rampton, Nottinghamshire DN22 0JX, England, UK.

EL, LIBERIA. Mark, ON4WW, who was active as EL2WW is now home in Belgium for the holidays. He will return to Monrovia in mid January. He will take his own equipment this time because Mark was having some technical problems with the locally loaned transceiver. He will be active here for several more months. QSL via ON5NT.

FG, GUADELOUPE. "The 59(9) DXReport" states to look for Didier/F5NZO and Eric/F5SSM to be active from here December 24th through January 1st. Activity will be on 80-10 meters with operations on SSB and RTTY, and maybe RS-12. Their callsigns are likely to be FG/homecall.

FO0, AUSTRAL ISLAND. Einar, LA1EE, is currently active on Tubuai Island in the Austral group as FO0EEN. He will be there until December 30th. Most of his activity seems to be on 80 and 40 meters CW. QSL via LA1EE.

FT5W, CROZET ISLAND. Look for Gilles, F5AGL, to be active very soon as FT5WH. His activity will be mainly SSB only. The length of his stay is unknown. QSL via F6KDF, Gendarmerie de Bron, 292 Route de Genas, 69677 Bron, France.

FT5ZH, AMSTERDAM ISLAND DXPEDITION (Begins to close down!). From the latest press release, the operators on Amsterdam Island are nearing the end of their stay on the island. The ship will arrive approximately Wednesday, December 23rd, depending on the weather and the seas. They must be ready to board when it arrives, so they will begin to dismantle the antennas on Monday, December 21st, a few at a time. All the press releases issued this week will be sent to all OPDX InterNet Subscribers as an additional bulletin. Meanwhile, operators continue to be active at various times on the WARC bands and RTTY, as well as the regular HF bands.

FT5, FRENCH ANTARCTICA/FRENCH TERRITORIES IN THE SOUTHERN INDIAN OCEAN. The DX Lyon Gang reports to look towards January for activity by FT5ZJ from Amsterdam Island. Specific dates on arrival and departure were not mentioned. Also, look for FT5YG to be active from Terre Adlie (will be there for 1 year). Beginning March and onwards, look for Helios, FT5XN, to be active from Kerguelen. Helios was there once before.

HK, COLOMBIA. The "LNDX" reports that Gerard, F2JD/G0SHN, has received his licence as HK3/G0SHN. He will stay there for one year, maybe two.

NEW OFFICERS. The Twin City DX Association of Minneapolis/St. Paul, Minnesota, has elected the following hams to serve as officers in 1999: President - Tom Lutz W0ZR; Secretary - Greg Fields K0OB and Treasurer - Doug Arntson K0PX.

PACIFIC TRIP TO FIJI (3D2) AND TUVALU (T2). A well known German DX group plans to be active from Nadi and Funafuti between December 24th and January 15th. Their callsign for Fiji will be 3D2DK, and their activity is planned from December 24th through January 1st. The callsign for Tuvalu will be assigned upon arrival and is currently unknown. Their activity is planned for January 2-14th. Operators are DK1BT/Manfred, DK7YY/Falk, DL3DXX/Mar, DL2OAP/Tom and DL8OBQ/Uli. There are two Titanex V80E antennas for extensive lowband activity in their baggage. Also, a 5

element beam will be used for the the higher bands. They will be taking two complete stations with them, including RTTY equipment and maybe even a microphone for some SSB operations. They are currently trying to arrange some kind of "Log Search" for their Web page as well as a regular feedback between you and them by using E-mail/fax. Check their Web page at: http://wwwiti.cs.uni-magdeburg.de/~hoeding/hamradio/3d2_main.html

PACIFIC TRIP TO FIJI (3D2) AND MARQUESAS (FO0). Pekka/OH1RY and Jaakko/OH1MA will be active as 3D2RY and 3D2MA respectively from the Fiji, December 30th until January 6th. Also, look for them to be active as FO0KOL (Pekka) and FO0SIL (Jaakko) from the Marquesas, January 7-13th.

PACIFIC TRIP TO FRENCH POLYNESIA (FO) AND MARQUESAS (FO0). The "LNDX" reports that Alain, F2HE, will be in French Polynesia (also Marquesas) from May to July, 1999. He hopes to be active from several different islands.

PIRATE ACTIVE. Anthony, G4UZN, reports to us that he has been receiving QSLs from USA and Canada for ZA1RSB which was active a week or so ago. Anthony states, "Note for your records this is a pirate."

PY0, FERNANDO DE NORONHA. Iwao, PY8IT, will be active as PY0FT from December 22-28th. This is his second trip to Fernando de Noronha Island. His activities will be mainly 40, 20, 17, 15 and 12 meters, but if conditions are good, he will try 10 and 6 meters. Iwao will be taking his TASCO TSC-200 for SSTV operation. QSL via JA1ELY.

QSL INFO AND NEWS.....
OH0Z and OH0AW QSL go via OH1EH (Ari Korhonen, Kreetalank. 9 As 1, FIN-29200 Harjavalta, Finland

QSL LU7EC via "LUC" SARMIENTO, S/N C.P. 2703, CARABELAS, Bs. As. ARGENTINA or via the bureau.

The logs for the recent German operation TY8A are now available on the German DX Foundation Web page at: http://www.qsl.net/gdxf

Just a quick reminder that the QSL Manager for RM6A (since the CQWW CW Contest) is Joe, W3HNK. QSL all previous QSOs with RM6A (before CQWW CW) to: Sam Dubovtsev, P.O.Box 600, Krasnodar, 350062 Russia.

Tex, VK1TX, has a new QSL Manager, Bill, K1WY. He mentions people can still send either direct, VK1 QSL Bureau, or K1WY.

Special event station SN0KRT, which was active recently to commemorate 13th anniversary of the club station in Piekary, can be QSLed via the bureau to SP9KRT or direct to SP9KRT`s callbook address.

PLEASE TAKE NOTE. Adam, KU9Z, reports he was listed somewhere recently as the QSL Manager for WP2Z. This is incorrect, and the correct QSL Manager is KU9C.

Coly, 3W5FM (home callsign UA0FM), has a new address for QSLs direct: P.O. Box 37, Vladimir, ZIP 600000, Russia

RA0FF which was active in the 1998 CQWW SSB Contest, CQWW CW Contest and the ARRL 10 Meters Contest now has a log search Web site at: http://www.qsl.net/ra0ff/
QSL via N6FF or RA0FF's CBA address (NOTE: If you send direct QSLs to RA0FF, please enclose IRCs in an envelope, but no USD, or use registered mail.).

Doug, N6RT, reports that he has received the color picture QSLs from the printer for their October, 1998, operation from Guadeloupe. QSL requests for FG/N6RT, FG/W6KK, FG/K6RO, FG/N6ED, FG/N6RV, FG/W6SR, and FG5BG (for the 1998 CQWW SSB contest ONLY - via K6RO) will be answered shortly. A log search and twelve pictures from the DXpedition (including a picture of the QSL card) can be found at the Web site: http://members.home.com/dab/n6rt.html

Hannes, DL3NEO, who operated 4U1VIC on November 20th and 21st, can QSL this operation ONLY. He reports that he has been receiving QSLs for other days and operations. He is not the QSL Manager for any other activity of 4U1VIC (e.g. during CQWWDX-Contest Nov. 28/29th). Please look carfully for the given QSL manager.

S2, BANGLADESH. The "DX News Sheet" reports that Bob, G3REP, has applied for a temporary licence to be active again between December 21st and January 31st while waiting for a permanent licence. He hopes to be active on 160m despite the high QRN and will try to find a QTH out of town for the CQ 160 Meter Contest. QSL via homecall.

VQ9, CHAGOS ISLANDS. Dale, W4QM, is once again active as VQ9QM. His activity is mainly CW. He was heard on 80 meters between 2100 and 0000z and on 12 meters between 1330 and 1600z. Also, check 30 meters between 1800 and 2000z. His length of stay is currently not known. QSL via W4QM.

XZ1N DXPEDITION MYANMAR WRAP-UP. In a press release by Dan Brown, NA7DB, states that the members of the XZ1N-1998 DXpedition team wish to express their sincere gratitude to the DX community for their overwhelming response. In just over 3 weeks, more than 38,400 contacts were logged in Yangon, the capital city of the Union of Myanmar. The team is also grateful for the support of the government of Myanmar, H.E. Gen. Khin Nyunt, Secretary 1, and the Ministry of Hotels and Tourism, especially Mr. Htay Aung, the General Manager of Myanmar Tours & Travels. OPDX InterNet Subscribers will receive the complete press release as an additional bulletin. Non-subscribers can go to the XZ1N Web page for more details at: http://ng7m.qrq.com/~xz1n

YK, SYRIA. Omar, YK1AO, is now active on 160 meters. He has been heard on 1826 kHz around 2030z and 0315z (and later). "The 59(9) DXReport" states Omar is using 1500w into a Gladiator Vertical. When he is not active on 160 meters, check 40 meters between 0345 and 0500z. He is also active on RTTY.

ZK3, TOKELAU. As this bulletin was being prepared Ron, ZL1AMO, became active as ZK3RW. Activity seemed to start on 15 meters CW and then moved to 10 meters CW on 28495 kHz. His length of stay is unknown. QSL direct

via his CBA.

ZW/ZY, BRAZILIAN ACTIVITY.......
Look for ZY7FO to be active from Itamaraca Island (and Fort Orange), January 16-18th. Activity will be on 80-10 meters CW/SSB. Also, check the IOTA frequencies and the Brazil DX Net. Reference numbers are: DIB-018, IOTA SA-046 and DFH-01-PE. QSL Manager is PR7RT, Guelfo Jorge Poltronieri, P.O.Box 008, 58001-970 - Joao Pessoa - PB - Brasil

Look for ZW7SC to be active from Fort of Santa Catarina, January 23-25th. Activity will be on 80-10 meters CW/SSB. Also, try the Brazil DX Net. Reference number is DFH - 001-PB.

A lot of people seem to think that the Americans are the most ignorant, arrogant and lousiest people in the world.
How do you like that, Jim?

Did it ever occur to you that there are no "European operators"? Obviously not. I always thought there are good and bad operators, and I cannot remember to have worked a lousy G or OZ or OK or 9H, to mention just a rew "Europeans".

And how is your German, Italian, French, Greek, Portugese, Swedish, Dutch, Russian... to mention just a few European languages. Do you understand every word and message uttered in one of these languages? Or do you simply take it for granted that everybody MUST speak and understand English, because you do?

I'll leave it at that and hope you will represent your country and homeland with a little bit more tolerance and politeness next time.

73 and Merry Christmas from one of the rudest, crudest and lousiest operators in the world

I said no further communication and I meant it. Oh
well. Guess you better start filing an action in small
claims court. You waited six months during which
time you never said you wanted the antenna after
I told you to tell me when you wanted it and I would
get it down. Then, you apparently either got a better
deal on another antenna or simply decided you didn't
want mine. During that time my antenna was off
```

the market so I'm out the interest on my money for
those months as well. If you weren't such a jerk
we could have settled this without a problem but
since you chose not to do so then you'll just have to
bear the consequences.
No further correspondence from you will be read.
Merry Xmas
Tony N7BG

Does anyone use FAX on the amateur bands any more?

What standards?

What kind of equipment?

What frequencies (HF and VHF)?

Any organizations or newsletters specializing in it?

73

I am interested in contacting hams in Greece, or along the Western/
Northern Meditteranean Coast who are interested in trying to work SSB/CW on
430 mhz band.

I am located high up in Jerusalem, Israel, and have a 19 element yagi for
this band.

If interested, email me and maybe we can set up a sked for January or
February.

Thanks,

Mark 4X1KS

4162. How to send via QSL Manager?

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-21 00:00:00 UTC
From: Bob Sikes <rwsikes@mediaone.net>
Message-ID: <367E3FB6.711CDC76@mediaone.net>
Source record: 26518

I'm new to DXing and am not sure what to do when a station requests that my QSL card be sent to a QSL manager. I'm a member of ARRL so I can use the bureau to send cards overseas. I guess that the idea is to address and sort the card according to the QSL manager not the station. Perhaps the format is Station via QSLManager? I didn't find anything about how to indicate the Manager on the ARRL web page and I don't want the screw up when I send in my first cards.
Alternately, do you need to send the card directly to the QSL manager?

TIA

California, "plain"? Perhaps California should be considered a DX country all to itself. After a recent trip to LA, I'm sure it's exotic enough ;-)

wrote:

>I'm new to DXing and am not sure what to do when a station requests that
>my QSL card be sent to a QSL manager.

For buro qsls via a manager, simply turn the card over, write the
"VIA" and the manager's call on the back and send it off to the buro,
sorted by the dxcc of the manager. It'll get there eventually and if
you're lucky, a reply will follow. Allow about a year from the time
you send it (actually, that's the general timeframe whether you send
by manager or direct...)

For domestic (USA) managers, find the callbook address and send your
card to them with a SASE and you'll usually get a reply in fairly
short order. Probably the cheapest way to get a card confirmed when
you don't want to wait for the buro.

If you're in a hurry to confirm new DXCCs, send the QSL via postal
mail direct to either the station (or his manager, as appropriate)
with a self-addressed return envelope and a greenstamp ($1 bill) or
two or an IRC (or two). You need a $.60 stamp for international
postage (don't know if that's going up in January or not). Dollars
are probably more likely to produce a reply but also more likely to
get pilfered somewhere along the way. IRCs must be properly stamped
when you get them (on the left side only!) or they're worthless, and
unfortunately, one IRC isn't always enough for return postage from
some countries.

73 and good DXing...

4170. Re: How to send via QSL Manager?

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-21 00:00:00 UTC
From: Paul Womble <aj4y@concentric.net>
Message-ID: <367EA882.21F59478@concentric.net>
Source record: 26526

The SASE is very important for any qsl manager. If you need the card, please take the extra effort to enclude an SASE. It never fails to amaze me the number of cards with:

"thanks for the new country"

"I needed this for a new country"

on the card, but they sent the request as a post card. No return envelope or postage. I dont know about other managers, but I will get around to answering those cards, but only when others have sent extra postage.

Moral of the story:

Include an SASE with the proper postage, and your odds of getting the cards you want back will increase!

Paul AJ4Y

Doesn't bother me in the least, Wolf. Should it ? If so, why ?

>Did it ever occur to you that there are no "European operators"?

Yes. It occurs to me every time I turn a radio on and the band I am on
is open to Europe. Listening to Europe for five minutes usually verifies
the fact that there are no European operators.

Nope, I can't send '599' in German, Italian, French, Greek, Portugese, Swedish,
Dutch, Russian, Chinese, Japanese, Tagalog, or even English. Only in Morse.
Nobody calls me for long, warm, fuzzy converstations. They usually just call for
a QSL card..... If somebody from Europe did call to chat, I couldn't chat with
them anyway because of the other European 'operators' who never stop calling.

>I'll leave it at that and hope you will represent your country and
>homeland with a little bit more tolerance and politeness next time.

I don't represent any countries, Wolf, I leave that to the politicians. I only
represent me. I'm not much of a politician, I say what I think, not what
I think people want to hear.

>73 and Merry Christmas from one of the rudest, crudest and lousiest

While I agree with you in principle, I take one exception. Perhaps I'm just naive, but to me sending a QSL card to a station with which I had a nice QSO is more of a courtesy than a request for a card. If I really need the card for an award, I agree completely. But hopefully that's not the only reason to send out the cards. I think of them like Thank You notes for a pleasant time. I couldn't afford to do this at direct postal rates, but a bureau rates, no problem.

You raise something I didn't know anything about. The ARRL bureau says that the won't handle SASEs and "green stamps". But mentioned domestic QSL managers that will do this. Is this correct? So far all the QSL managers I have heard have been overseas. But then I'm new at this.

Thanks

> by manager or direct...)
>

My questions are 1) Do you mean write this where you would normally write the address? Something like VE4XXX via F6XXX and the card goes to the French station 2) Do I send it to the ARRL bureau or a bureau in France? (Hopefully the former)

I know these are basic questions, but as a rookie most of my questions are pretty basic.

Great! I didn't know about this. So far I've only encountered non-USA managers.

Thanks

Quite a few operators use domestic SQL managers. There are many sources
for SQL info. One is the North Jersey DX Association website

www.njdxa.org

You'll find a wealth of DX information including a look up for QSL
managers

On the back of the card, usually upper left hand corner, write the call
of the station who will ultimately get it, either the SQL manager of the
station you worked or the station itself. Send it to the ARRL bureau
(remember, you need to be a member to utilize this benefit)

There are many stateside SQL managers..remember the SASE

for a wealth of DX information, one good source is the North Jersey DX
Association's web site

www.njdxa.org

Probably the Principality of Seborga. It's in northern Italy, but isn't officially recognized by DXCC Desk as a country, not even as Italy. They do, as a rule, have beautiful cards, though.

On Mon, 21 Dec 1998 20:58:42 -0500, Bob Sikes <rwsikes@mediaone.net>
wrote:
>My questions are 1) Do you mean write this where you would normally write the
>address? Something like VE4XXX via F6XXX and the card goes to the French
>station 2) Do I send it to the ARRL bureau or a bureau in France? (Hopefully
>the former)

Assuming the back of your card is blank, you just write "VIA F6XXX" on
the back. If the back of your card isn't blank, find a spot near the
top and write the VIA info. If you really want to be clear, use a
yellow high lighter on the VIA info.

The cards are sorted by people who've (generally) been doing this for
a long time and can generally figure out what you meant even if you
screw it up, so don't worry too much (although you should try to make
their life as easy as possible. Always be nice to people who are
doing something for you which is essentially free...)

The outgoing QSL cards should be sent to the ARRL Outgoing QSL Buro,
with the appropriate fee (which is going up soon I think, but still
beats the pants off of doing it one at a time yourself). Of course,
you need to be an ARRL member to use the outgoing buro.

The other half of the equation that you haven't mentioned is how to
get the reply back from the foreign station. That's where the ARRL
Incoming QSL Buro comes in. You don't need to be a member of the ARRL
to use the incoming buro.

All you need to do is send some SASEs (usually 5x7 envelopes) to the
buro that serves your call area (the number in your call, not where
you live) - the ARRL web site has address info for all the buros and
some buros even have web sites that give info on their preferred
practices. Some prefer that you send money to purchase pre-stamped
envelopes and extra postage from them, others don't care how you do
it. If the buro serving your call area doesn't have a web page, write
a quick note asking what their procedure is, include an SASE for a
reply, and send it off.

Keep in mind that the incoming buros are all staffed by volunteers -
usually a club is responsible for the buro and recruits its members to
do sorting and mailing of cards. It takes time for the cards to
arrive from the foreign buros to the ARRL, then it takes time for them
to sort them and send them to the call area buros. The the call area
buros sort them by letter (the first letter after the number usually)
and farm them out to the letter sorters who sort them by the second
letter, stuff envelopes, keep records of everything they do, lick

stamps, and ultimately drop them in the mailbox for your house. For a round trip from your house outbound and then back again, expect to wait a year or so.

Just follow through and take him to small claims court. Ask for the $100
plus any expenses such as the filing fee that you can claim.

Notice in the DXCC Countries listing under VU, a separate country listing for Lakshadweep Is. Is this the former Laccadive Islands, since I do not see that listed?

The only 3 listed are VU India, VU Andaman and Nicobar Is and VU Lakshadweep Is. so I suspect there may have been a name change by their government. 73 Murray

Ouch, looks like I have a broken newsreader setting - wasn't until today I saw your excellent & informative response! That in fact answers all the geographic questions. Doesn't answer the propagation ones though<g>. It looks like some of those cities are, in fact, west of the Urals & one would think they wouldn't suffer from the shielding effect. (the Appalachians do seem to have a dramatic effect on things here in the USA)

Come to think of it, can't remember if I worked any UA4s in the test.

> For the record, I worked several UA9 and UA0 stations in the 10m
> contest ... but it's a little easier from here than from W9!

I landed a handful of UA0s also, but here we get them the other way around - guys around Kharbovsk and Vladivostok come in from the northwest with the JAs. Anything much further west would be a rare catch. (at least this year)

I'm actually in W4, but Nashville is west of the mountains & propagationally much closer to Indiana than to North Carolina.

TO150 DXPEDITION. Activity is planned on top of "Piton des Neiges", an island off of Reunion, with an altitude about 3069 meters. Activity will last for 3 days. On December 18th, 19th and 20th, look for TO150 (Tango Oscar One Hundred Fifty) to be activated by 10 operators on CW/SSB/RTTY on 160-2 meters. A special QSL will be available. The special callsign is in celebration of the 150th anniversary of abolishing slavery on Reunion Island on the December 20, 1848.
FR - Ten operators will be active (on 160-2 metres, CW, SSB and some
RTTY) as TO150 (Tango Oscar One Five Zero) from Piton des Neiges
(3069 metres ASL) on Reunion Island (AF-016) between 18 and 20
December. The special callsign is to celebrate the 150th anniversary
of the abolition of slavery on Reunion (20 December 1848). For
further information please visit http://www.oceanes.fr/pdn/
[TNX
IK2RXV and FR5FC]
CORRECTION TO OPDX.380. Herik, FR5DX, states under the TO150 DXPEDITION: "Le Piton des Neiges" is not an island off of REUNION, but the highest summit of the REUNION island culminating at 3069 meters over the Indian Ocean.

Source record: 26560

I can't read the original message that started this thread as it's no longer on my news server. But, I think that one of the points was why there seemed to be no UA9 activity during the 10m contest, at least from the standpoint of US DXers. I wondered about this also, as I worked the 10m contest from a friend's contest station (W4PRO) and worked about 750 Europeans over the course of the two mornings, including a large number of European Russians. The Asiatic Russians were notably missing.

The other day, I looked at the sunrise/sunset lines on the world map included in my DX4WIN logging software. I think that the answer is that as we were pretty close to solstice a few weeks ago, the sun was already setting east of the Urals before 10m began to open up to the states. In fact, a lot of the more esoteric stations that one can often work near the equinoxes on 10m were absent during the 10m test, probably simply due to no propagation at this time of year. The CQ WW DX contest and the ARRL International DX contest usually provide more interesting propagation on 10m (for me, at least) than the 10m contest in early December. Going back to my logs from 1991/1992, I found that I would generally work the UA9's/UA0's and the former Asiatic Soviet republics (e.g., UN, EX) in September/October or February/March on 10m during our morning as the band opened.

In the evening, as Doug mentioned the UA0's from the far east make it into the east coast of north America. During the last sunspot peak, I enjoyed seeing how far west in UA0 land I could work as propagation began to fall off with north America going into darkness. I even worked a couple of UA9s after my sunset and one of them (can't remember the call) I managed to work both during our early morning and early evening (near their sunset and sunrise, respectively).

In a previous article, plemken@mail.blinx.de (Peter Lemken) says:

>What was this about? Can a pirate have the audacity to operate for well
>over two hours? Any information?
>

In answer to the first question, my guess is someone was having fun for a while seeing what havoc he could wreak on the band.

In answer to the second question, YES! I have heard a couple pirates go for several hours.

In answer to the third question, no solid info. It seems those with beams in this area were getting the signal everywhere from 330 degrees (fairly close to the true P5 heading) down to 240 degrees (could've been a VK or ZL).

I've often wondered about the effect of the mountains. On mediumwave
and longwave, anything east of the Appalachians is much tougher than
an equivalent target the same distance away but west of the mountains.

When I lived in Florida 350 mi due east of my current QTH I remember
the East Coast stations (e.g. New York City) being much easier to hear.

>I've often wondered about the effect of the mountains. On mediumwave
>and longwave, anything east of the Appalachians is much tougher than
>an equivalent target the same distance away but west of the mountains.

I have limited experience working HF east of the mountains myself.
(strictly mobile with a 3m whip) However, I've had plenty of opportunity
to listen to similarly-equipped Eastern stations working HF in contests!
The European opening definitely starts earlier - well more than the one
extra hour I would expect by the difference in longitude. Surprisingly it
doesn't seem to close much later there.

Yes, the mountains are a definite barrier to my MW and LW work as well. MW
stations east of the mountains do come in, but stations of equivalent power
(and often with *less* efficient antennas) and at similar distances to the
west are almost always substantially stronger. I have only *once* heard any
audio from a European MW broadcast station, and only on rare occasions from
trans-Atlantic LW broadcasters.

Actually the effect is even more dramatic at VHF & UHF. (though I suppose
that shouldn't be a surprise) I have logged dozens of Texas FM and UHF-TV
broadcast stations at distances between 1000 and 1600km via tropospheric
propagation - but my log contains *two* broadcast stations (one each FM and
UHF-TV) from North Carolina, only 400km east of here.

73 Doug
(yes, the original question was "why did I work so many loud UA6s in the
10-Meter Contest but not a single UA9?")

DX Bulletin 51 ARLD051
From ARRL Headquarters
Newington CT December 24, 1998
To all radio amateurs

SB DX ARL ARLD051
ARLD051 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, The Daily DX, DXNL, 425DXnews and Contest Corral from QST. Thanks to all.

UNITED NATIONS HQ, 4U1UN. Don, K2KQ, and Piero, IK2BHX, are QRV from 4U1UN. Activity has been on 160 and 80 meters and the newer bands. They have also been active using RTTY. QSL via W6TER.

NIGERIA, 5N. David, 5N0/OK1AUT, has been QRV on 160 meters around 2330z. QSL to home call.

BOLIVIA, CP. Claus, DJ8UG, is active mainly on CW and Pactor as CP4BT from Uyuni. QSL via DL9OT.

GUADELOUPE, FG. Didier, F5NZO, and Eric, F5SSM, are QRV as FG/homecalls until January 1. Activity is on 80 to 10 meters SSB and RTTY, and possibly on RS-12. QSL to home calls.

AUSTRAL ISLANDS, FO. Einar, LA1EE, is currently active on Tubuai Island in the Austral group as FO0EEN. He will be here until December 30. Activity is centered around 80 and 40 meters. QSL to home call.

CROZET ISLAND, FT5W. Look for Gilles, F5AGL, to soon be QRV as FT5WH. His length of stay is unknown. QSL via F6KDF.

FERNANDO DE NORONHA, PY0. Iwao, PY8IT, is QRV as PY0FT until December 28. Activity is mainly on 40 to 12 meters. He may also try 10 and 6 meters, conditions permitting. SSTV operation is also expected. QSL via JA1ELY.

BANGLADESH, S2. Bob, G3REP. is QRV as S21YP until January 31. Emphasis is on 160 meters. QSL via operator's instructions.

FALKLAND ISLANDS, VP8. Look for Jan, K4QD, to be QRV as VP8CRB from December 26 to January 16. Activity on 160 to 10 meters, including the newer bands, is expected. On RTTY, look for him to use the callsign VP8TTY. QSL to home call.

CHAGOS ISLANDS, VQ9. Dale, W4QM, is active as VQ9QM. His activity is mainly CW. He has been QRV on 80 meters between 2100 and 0000z and on 12 meters between 1330 and 1600z. Check 30 meters between 1800 and 2000z. His length of stay is unknown. QSL to home call.

SYRIA, YK. Omar, YK1AO, is now active on 160 meters. He has been QRV on 1826 kHz around 2030z and 0315z. When not on 160 meters, check 40 meters between 0345 and 0500z. He is also active on RTTY.

TOKELAU ISLANDS, ZK3. Ron, ZL1AMO, is QRV as ZK3RW. Activity so far has been on 15 meters CW and then 10 meters CW. QSL to home call.

THIS WEEKEND ON THE RADIO. During this Holiday weekend, you'll find activity in the Stew Perry Topband Distance Challenge and the RAC Winter Contest. Please see December QST, page 95 for details.

Hi Doug,
This sounds like the "get the drug pushers out of our neighborhood so they can go
somewhere else". I'd rather confiscate their radios and put them in jail. Now that the F.C.C.
is starting to enforce the rules again, maybe we'll see that happen.

I sure hope so, and maybe it actually will, at least with regard to the ones making it above 28MHz. (I would be *very* surprised if the current crackdown will extend to the range between 27-28MHz)

Unfortunately a fair bit of this crap is coming from places outside the FCC's jurisdiction. One suggestion I've heard which may have merit is to swap the CW band with part of the phone band. (for example, put Novice/Tech phone at 28.0-28.2; make 28.2-28.5 CW only; then continue to allow upper-class phone in 28.5-29.7) The idea being to ensure the lower end of the band contains signals that will be recognized by the intruders as signals. Whether they'd just move up above 28.2 is a good question.

In the meantime, when I have reason to do some testing on the equipment, I will be searching out an intruder to tune on top of.

11 Meters DX is illegal in the USA.

In the grander scheme of things, the
historical value of what we have done
here is nil. -- proverb

4232. ICOM 730 on WARC bands.

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-25 00:00:00 UTC
From: bragassa@hal-pc.org
Message-ID: <3683beab.12633908@news.hal-pc.org>
Source record: 26581

Perhaps not the right place to post this; but only ham related newsgroup I subscribe to:

And to keep it DX related: A cure for this problem will afford me to work Dx on the WARC bands while my regular radio is in the shop:

My old trusty mobile rig, a Icom 730 will receive on the WARC bands but not xmit. Is there a 'brown wire' somewhere that can be clipped, etc to activate it to xmit?

Seems to me when I bought this radio in the early 80's that the WARC bands were sure to go through, but not official...yet.

Any help?

Message-ID: <3683C6DB.D60E7C8E@NoSpam.com>
Source record: 26583

I think swapping the band segments is a pretty good idea. During the 10 meter contest a few weeks ago, all the activity on 10 CW seemed to move most of the intruders off our bands. I'd like to suggest a modification to the plan. Why not move the FM repeater band down to 28.0-28.2. The repeaters are very loud when the band is open and they transmit much of the time. You'd probably want to make the output from 28.0 to 28.1 and the inputs from 28.1 to 28.2.
Up here in the northwest, we hear about 50% Spanish/English amoung the intruders. It sounds to me like some of the Spanish speaking intruders are in the south/southwestern U.S.

At least at one time, there was a distance limit in the CB rules. I want to say 250 miles, but could be WAY off. (it was definitely no greater than 250) To the best of my knowledge, that rule has not been repealed.

Well, Sam, there are power limits and also distance limits on Citizen's Band
radio.
The reason it's a crime is because it's against the law.

No problem,

Sec. 95.413 (CB Rule 13) What communications are prohibited?
(a) You must not use a CB station--
<< stuff deleted..go to the FCC home page if you want to see it >>
(9) To communicate with, or attempt to communicate with, any CB
station more than 250 kilometers (155.3 miles) away;

It's also illegal to use amplifiers, noise makers, modify your CB in
any way, talk to anyone in any other country except General Radio
Service stations in Canada, rebroadcast other services, transmit
sound effects or music, and operate outside the 40 assigned
channels.

Happy Holidays!

I just bought the book a week ago from a local store in Denmark and I'm about to finish it now. I can only recommend the book to all who's been caught by the fab world of DX'ing!! It is a very interesting book answering allmost all my questions not only abt HI but also DXpeditions in general - what a struggel these hams go through in order to activate these 'most wanted' so that we can expand our collection of exotic QSL-cards!

I have heard abt a book called "where do we go next" by Martti Laine but even though I have searched a lot I cannot find it.

Anyone knows where to get it (in english version) ??

Refer to FCC Rules part 95, Subpart D, Paragraph 95.413, sub-paragraph
(a)(9) which "You must not use a CB station to communicate with, or attempt to
communicate with, any CB station more than 250 kilometers (155.3 miles) away."

Power output is not a factor, it's the purpose for which the radio is
being used. As a resident of South Central NYS, if I hear DXers from Alabama
out there and if I try to contact them, I am in violation of the law, even if
I am running only 4 watts output.

Seems to me that a licensed ham, even Technician class, should realize
that...

I don't have a copy of the regulations for Citizen Band in Slovenia, but

I have found that it is restricted to 4 watts, AM/SSB, vertical antennas

of limited height and the same 40 channels as the USA.
I assume that there are other restrictions that are similar to US law
(type accepted equipment, no amplifiers, no communications with
stations operating illegally, etc.).
So Nicolas, what is the law in Slovenia regarding long distance contacts

on the CB bands?

4263. New "HENRY" reflector on contesting.com

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-26 00:00:00 UTC
From: Radiodan W7RF <RFpower@radiodan.com>
Message-ID: <vKgh2.3057$Jv6.4090@cmnws01.we.mediaone.net>
Source record: 26420
Cross-posted to: alt.ham-radio.marketplace,rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

Hi folks,
An announcement about the new HENRY reflector on contesting.com.
Here's how to join the group! We talk about anything related to HENRY Amplifiers.
Address a new e-mail to majordomo@contesting.com

In the body (NOT subject) of the message simply type subscribe henry

When you get the confirmation back, just copy and paste into a new e-mail the authorization information.

You will get another confirmation that you are all set and welcome to the list! Then, after you're all set-up just type henry@contesting.com to post new messages.

Hope to see all HENRY enthusiasts there!

Hi there,
I am looking for the correct Email address for VY1RT, I have him down
for ronaldtull@polarcom.com, but it keeps throwing it back in my face.
Any help appreciated.
Regards,
Les .

Alex,
To answer your question, we need the following information.
1) Are you legally licensed, in you home country, to operate on the
frequencies you use for DXing? Who is the licensing authority
in your country? (and how would we contact them to confirm
your information)
2) Is DXing legal under the license you hold?
Steve AI7W

Need specs - Heath HD-1234

Hi.

Am looking for the isolation (in db) for a Heath coax switch, model HD-1234.

Anyone have these specs?

de Rick, W1TY

4272. ANNOUNCE: New CLX 4.03 released (finally!)

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-27 00:00:00 UTC
From: "Erwin Lemmers (pe1nmb)" <elem@kabelfoon.nl>
Message-ID: <36867292.EFC4153B@kabelfoon.nl>
Source record: 26429

```
Hello friends,

A new version of CLX was released on December 27, 1998 It was uploaded
to ftp.funet.fi:/pub/ham/incoming that day. For the very impatient,
the new files were also placed at ftp://ftp.muc.de/people/buettneb/clx.
I hope the archive maintainers will soon find the time to move
the files to the appropriate directories so you will find the files
at the "official" URL:

ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster/clx

Here is the version 4.03 readme file:
------------------------------------------------------------------------
CLX Version 4.03 released December 27, 1998

Version 4.03 is a patch over all of the previous 4.00, 4.01 and 4.02
versions
or intermediate fixes like 4.0{0,1,2}{a,b,c}. Only binaries
and some scripts have changed over the previous versions so you need
*not*
re-install the whole software tree and re-read all the tables this time.

Take a look to the CLX WEB page for latest news and hot fixes:

http://www.lurpac.lancs.ac.uk/g0vgs/clx.html

*** APPLYING THE PATCH ***

If you are installing a new CLX, get the file clx_400.tgz, install
the software per instructions and when it comes to unpacking the
TAR archive, first unpack the clx_400.tgz file and then
unpack the upd_403.tgz file, hereby replacing some files.

If you are upgrading from 4.00{a,b}, 4.01{a,b,c} or 4.02, do the
following:

1. Shutdown your current CLX software but leave the postmaster
running. You may have to become user 'postgres' and then startup
postmaster with 'postmaster -i &'.

Take care that watchdog is deactivated if you are using it.

2. Remove some files from previous installations:

$ rm -rf ~/lib/libclxccl.so.4.*
$ rm ~/doc/sysop/README_* ~/doc/sysop/Errata*
$ rm -f ~/tools/clx_start ~/tools/clx_stop ~/tools/vacuum

3. As root do:
```

```
# cd /
# tar xvzf upd_403.tgz
# ldconfig
```

4. As clx_us do:

```
$ psql clx_db -c "drop table ar_band"
DROP
$ psql clx_db < ~/db/ar_band.cl
$ psql clx_db < ~/config/ar_band.cd
```

5. Now you can start the new CLX 4.03 without having to re-read
all the database tables.

```
$ clx -u
```

*** CHANGES ***

- clxd now also follows ~/config/adv_txt.default if it is there.
Otherwise ~/config/adv_txt is being used (tnx F6FGZ).

- Clarified the routes.tnt entries in the documentation.

- clean_log fixed to ``chown'' logs to clx_us:users when creating
a new one. A problem ocured with cba.log (tnx SV1AAW).

- Cleaned up the ~/doc/user directories. Now it's easy and
straightforward for the doc maintainers to keep the documentation
up to date and adding a new language (Spanish, Swedish, Slovenian,
any takers?) is easy. Thanks to many contributors, we have now
an English, French, Portuguese and German user manual for you
to print out. They can also be accessed from the CLX WEB page
as HTML documents.

- clx_watchdog redesigned and enhanced in that it now
(a) realizes when VACUUM is running.
(b) checks for a lock file which can be used to control
its activities. When the lockfile is there, watchdog will
never shut down CLX.
(c) has control commands like "SET/WATCHDOG", "SET/NOWATCHDOG"
or clx_watchdog {on|off} to create or remove the lockfile.
(tnx G0VGS for the ideas)

- modified clx slightly to allow running clx without database again
using "clx -u -nopostgres" to start it (tnx EA7WA). That was broken
in 4.02.

- Modified db_maint tool to run clean in batch mode. A new option
"batch" was impemented and the commands to be run in this mode can
be specified with the "batchcommands:" configuration command in
~/config/clx_par (tnx PE0MAR). Cleaned up the db_maint program a
little, added new options and partitioned the menus into sub-menus.

- A missing connect script made CLX crash (tnx PA3EZL, VE9PT and
IK5PWJ).

Fixed.

- With 32+ users and frequent connects/disconnects by users and
nodes sometimes a situation would come up where icl_com would produce
a very long string of "PC16" messages and then crash. Fixed this
problem with the help of DK4VW and many users at DB0MDX.

- Some tools (clx_start, clx_stop, reboot and vacuum) were removed
from the ~/tools directory and documentation was cleaned up
accordingly.
For regular database maintenance (including vacuum), you should
now use db_maint in batch mode.

- New user commands SHOW/LOCATOR, SHOW/COORDINATES and SHOW/SCATTER
(tnx DK0OG and OE5VRL).

- SET/NOANNOUNCE is now working. PC12 (announcements) are now also
honored with waz_ddd settings. TNX many).

- Fixed problem with clxd in that it was always getting the first
callsign that was entered wrong (ON1AFN, tnx NG7M and Eric for
fixing it).

- CLX now increases number of file descriptors to 3072 at startup time
by changing /proc/sys/kernel/file-max from the ~/tools/startup script.
This helps in occasional situations with many users (~40) and lots of
DB queries.

- Modified SET/LOCKOUT and SET/NOLOCKOUT that it now also locks out
remote nodes (however - not permanently).

- Fixed problem with occasional non-functionality of the SHOW/CBA
callbook lookup script. Increased timeout to wait for command
prompt to 15 seconds. Modified SHOW/CBA script to work with the
1999 Callbook CDROM and made it work with more than one callsign
(again), so you can call it like "SHOW/CBA DL6RAI DJ0ZY" and
get both addresses with a single command.

- Modified read_ak1a so that it now also accepts DL8EBW's nice
collection
of VHF/UHF station data and allows a command SHOW/VHF to retrieve it.

- SHOW/DXSTATISTIC now looks a little friendlier carrying understandable
band labels (like "20 m" or "70 cm").

- BBS interface program for incoming BBS connections, calls must be
specified
in bbs_lst in cls_par (tnx PE1NMB).

- PC24 is no longer transmitted triggered by Flexnet link check connects
(tnx DK4VW).

- The merge command at CLX initialization no longer affects the merging
node, the spots are no more sent out to other node connections. Also

DXDEDX, DX_LIM and SET/NODX setting are honored. This is for both
DX and WWV spots.

- When a user in an Pavillion node modifies his callsign with the
SET/ALIAS
command (Pavillion feature - not implemented in CLX) and then spots
DX, spots may come out like this:

PC11^21202.0^KL2A/W7^13-Sep-1998^2041Z^WAE^EA1AK/7^EA7URA-5^H99
^
|
this slash was offending

Until now, CLX ignored these spots. Now the '/' is changed to '-'
internally (tnx EA7WA).

- repeated PC12's where the sender's call changed SSID are now
recognized
(same policy as with PC11's where we had this problem earlier). These
repeats are generated by some faulty Cluster software not yet
identified.

- PC84 are now only forwarded to CLX nodes no longer to Pavillion nodes.

- An off-line logging feature was added to the log_monitor program to
allow analyzing log files after a crash.

*** KNOWN ISSUES ***

The following items are still "under construction" but did not make
it into this release:

- The reply command does still not forward the message to the correct
node. If the original message came in from a remote node, the
answer will not be delevered to that node.

- The bbs_lst can currently not be changed during runtime. This will
be changed in a future release.

- The grayline calculation is slightly wrong. SHOW/SUN and SHOW/GRAYLINE
show different results as the algorithms behind the calculations
are different.

- SHOW/VERSION is broken.

- DX spots with calls like "F/DL5MAE" are currently refused by CLX.

- external commands (SHOW/SUN, SHOW/HEADING) are currently not accepted
in UPPER CASE.

- Locking nodes with clx_adm does work only until cluster_par is
re-read.

SB DX @ WW $OPDX.389
Ohio/Penn DX Bulletin No. 389

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 389
BID: $OPDX.389
December 28, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1VV, NA2M, WB2RAJ/WB2YQH & The 59(9) DXReport, WB3JFS, N4XP, W4VQ, K6RIM, WA6KBL, K8YSE, K9MIF, CT3HF, DJ5AV & DX News Letter, DF6EX, DL6UAA, G4BUE & DX News Sheet, LU1DZ, PA0JR, PS7AB, PY1KS and RA1QHJ for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy New Year". Also, we would like thank the many who have contributed information over the year (there are too many to list). REMEMBER, without them there would not be an OPDX Bulletin.

EDITORIAL: "Quick Summary of 1998 for DXers" and "Are they REALLY DXers?"
To speak frankly about DXing, "It was a very good year" (sorry for the pun "Old Blues Eyes"). DXing in 1998 had to be one of the most interesting and most active in the last several years. DXers saw a change in the ARRL DXCC program.
Some rules were changed or modified which brought about new language terms and new countries (GEEE... I mean "new entities"). Due to changes, three new entites were added to the DXCC List: Austral Islands (FO0), Marquesas Island (FO0) and Temotu Province (H40). These three new entities were quite active throughout year by individuals and groups. To add to the excitement of the new entities, the 10 meters band became quite active this year. The band that has been quite silent for the last several years has awakened many dormant DXers. And just think, the fun has just began on this band.
Also in 1998, we saw some rare an inactive entities hit the bands. In May we saw an excellent operation from St. Brandon (3B7) hit the air waves. Probably the most noted operations took place in the last quarter of the year. It was good to see Eritrea (E3) on the air after a very long absence, hopefully this one will not go silent again. It was also good to hear Myanmar (XZ) on the air, this time during good conditions with very strong siganls. Another operation which kept DXers busy for a month was the

activity by the two French operators from Amsterdam Island (FT5Z). Yes, "1998 Was a very good year for DXers".
However, there were some bad times, too. It seems major DXpeditions still got haunted by so called individuals who insist on calling out of turn, jamming and interferring with these operations. "Are they REALLY DXers?" I orginally was not going to write about this, but due to the discussions that took place at the December NODXA meeting, I decided otherwise. A concerned NODXA member approached the club on this issue and felt that something should be done. He mentioned that he heard a few individuals state that they were fed up with ham radio and that they were leaving the hobby. My answer to them is: "DON'T GIVE UP! REMEMBER WHAT YOU ARE!" There is really no way to stop these individuals other than to "IGNORE THEM". They are NOT REALLY DXers. These individuals probably do not belong to any organization (e.g. ARRL, DX association) and could care less about working the DX station. Their main goal in life is to aggravate you and the situations that are taking place (huge pile ups). These individuals enjoy the large audience and will do anything to set off a chain reaction of disgruntled DXers. Let them do their thing and "IGNORE THEM". Hopefully they will leave. REMEMBER: You are a DXer. A person who is SKILLED, PATIENT and a KNOWLEDGEABLE member of a DX community. These are qualities that can not be found in jammers...etc..

10 METER BEACON ACTIVE AGAIN. The Ushuaia Radio Club (LU8XW) has again activated the LU4XS beacon. A report states that the beacon has been working since December 8th. The location of the beacon is on Tierra del Fuego Island. The beacon is on 28190 kHz using 5 watts output into an inverted VEE.

5X, UGANDA. Peter, ON6TT/5X1T, has returned back from his one month's Hurrican Mitch emergency telecom mission for the UN to Central America. He mentions that his part of the mission is now over. "This mission was hectic to say the least", states Peter. In one month, Peter took 27 flights and never spent more than 3 days in a row in one particular country (Nicaragua, Honduras, Guatemala and El Salvador). During the many days, the UN telecom teams were up from 4 A.M. and went to bed at midnight. So his ham activity was limited to about one hour from every country. Peter states, "No fancy stuff, just a quick breather to say HI on the ham bands." Peter is now home, on holiday in Belgium for one month after which he will be travelling back to his base in Kampala.

6Y, JAMAICA. The "DX News Letter" reports that Gerd, DL7VOG, will be on the air until January 8th. Activity will be on CW/RTTY on 80-10 meters using his IC-706 and a vertical.

C9, MOZAMBIQUE. Jon, 3DA0CA, says he will be in Mozambique and active as C91CO now until January 8th. No QSN have been reported.

CE9, SOUTH SHETLAND ISLANDS. Jeremy is active from a Chilean base on Livingston Island in the South Shetland Islands. Jeremy is a non-ham, but is learning about amateur radio as he goes along. His primary function is to place phone patches. Once phone patches are taken care of he will provide QSOs. He can be found at 0100z, 0200z or 0300z around

14270 kHz with K4MZU who helps provide the patches. Please QSL per Jeremy's instructions.

DX NET TO MOVE. The Brazilian DX Net will return to its original band, 10 meters, in 1999. Starting January 2nd, look for the net on 28430 kHz every Saturday/Sunday at 1200-1400z.

ET, ETHIOPIA. ET3BN and ET3AA have been quite active over the past few weeks. ET3BN was heard on 24892 khz at 1412z and 28528 kHz at 1400z. ET3AA was heard on 28520 kHz at 1430z, and also check 15 meters around the same time.

FT5ZH, AMSTERDAM ISLAND DXPEDITION. If you are not an OPDX InterNet Subscriber you missed the final press release bulletin by Jeffrey/WA6KBL and Gil/F5NOD stating that the operators on Amsterdam Island had to QRT earlier than planned because of a serious storm approaching the island. They were asked to take down the antennas because it would be impossible to take them down in the high winds. Their ship was to arrive approximately Thursday the 24th depending on the weather and the seas. In the press release they stated, "The DXpedition was not just a success; it was beyond expectations. They made more than 32000 QSOs in the log with just two operators and no backup for shifts. No equipment failed." They want to assure everyone that the logs will be analyzed when the operators return to Lyon in the beginning of January. Also, there will be a log search page on the FT5ZH InterNet site. If you did not work them, there is still hope for you. A young French soldier will be stationed there for a year. He was just licensed 3 weeks ago and he is authorized to transmit from Amsterdam Island with the call FT5ZJ. He will not be on very much, and certainly not for pileups, but this is a chance for you.

JD, OGASAWARA ISLAND. Look for JI1FLB/JD1 to be active between December 30th and January 3rd. QSL via homecall.

KH2, GUAM. The "DX News Sheet" reports that Gus, K4SXT, who is active for two years as KH2/K4SXT from Nimitz Hill, (650 ft ASL), has been working Western Europe on 160 meters (at 2030z, on 1824 kHz). OPDX has found that Gus has been working stateside stations between 1145 and 1245z. QSL direct.

NEW CLUB OFFICIALS FOR 1999. At its November meeting, the Redwood Empire DX Association (Petaluma, CA) elected the following individuals to serve during 1999: President - Al Burnham, K6RIM; Vice President - Wally Pugh, N6AD; Secy/Treas. - Bill Hillendahl, KH6GJV; Director - Joe Berkman, W6AIR; Director - Rick Reiner, K6ZWB; and Director Chuck Ternes, N6OJ. Continuing as Editor of "Sunspots," the newsletter of REDXA, is Steve Bertsch, WA6YFD.

P.A.M. DXPEDITION '99. Mart, DL6UAA, informs OPDX that "The Paradise on Air Mission 1999 (For friendship around the world.) is being planned for next year. From his Web site (http://www.qsl.net/dl6uaa/), he states that for the first time the "Paradise on Air Mission" will be not a single operator activity. Jacky/3B8CF and Mart/DL6UAA will be active together on Mauritius and Rodriguez Island. The callsigns will be 3B8/DL6UAA and

3B9/3B8CF, but special callsign for 3B8 and 3B9 are being applied for. Mart states that the duration of stay (Rodriguez Island) is dependent on the success of another DXpedition starting in January, 1999, which still is not confirmed. This is not correct because the other DXpedition team (Midway Kure DX Foundation) has announced that they will begin an operation on March 25th. He also states that their operation will start in March, 1999. Mart will stay for 2-3 weeks on Mauritius Island and with Jacky, 1-2 weeks are reserved for Rodriguez Island. More details can be obtained on Mart's Web site or send E-mail to Mart's InterNet address at: DL6UAA@t-online.de

POSSIBLE DELETION IN THE WORKS??? Headlines in Saturday's "The Plain Dealer" read "Russian, Belarus leaders discuss merging countries". Vladimir Isachenkov reports that "The presidents of Russia and Belarus agreed... to take steps to merge the two former Soviet republics into a single state as early as next year..... the merge would be put to a public vote.... The presidents said they would move early next year to introduce a single currency and harmonize taxes - without waiting for popular approval for merger.... Top Russian officials said there is no immediate plan to merge the two nation's armed forces or pool the government coffers...." The article does mention that there is opposition to the merger......

QSL INFO AND NEWS......
Fred, DF6EX, reports that a new freeware version of "Windows QSL Manager" is available for downloading from his Web site. This software package includes 5000 entries of QSL informations. This information was collected during 1998. The file can be downloaded from the Web page: http://www.qrz.com/df6ex You can also download the file directly from: http://www.qrz.com/df6ex/files/FREE.ZIP

Whitey, K1VV, reports to us that he continues to receive QSL cards for EP2EXX. This is a PIRATE and K1VV is NOT the QSL Manager.

It was reported to OPDX that the station PA6PCH/PCH which was active in the Farewell QSO Party of Scheveningen Radio/PCH was a great success. More than 2500 QSOs were made during the 24 hours of activity. Many ex-radio officers took the opportunity to say good-bye to the oldest coastal station. The station will close down on December 31st, at 1500 z after 94 years of maritime radio service. It is emphasized that no QSLs should be sent to PA6PCH or PCH. All contacts will be confirmed automatically via the QSL bureau. SWLs and amateurs who do/cannot use the service of a QSL bureau can send a SAE and at least 1 USD (green stamp) to cover airmail postage, to: PA0JY, Mr. K. Lagerberg, Langemaad 2, NL-1991EG Velserbroek, The Netherlands. More information can also be found at the following Web site: http://www.vrza.org/pch.htm

A group of CT3s (CT3CD,CT3HF and CT3KN) active in the last ARRL 10 Meters Contest as CQ9T state to QSL this callsign via CS3MAD at A.R.R.M., P.O.Box 4694, 9058 Funchal Codex, Madeira Island, PORTUGAL or via the Bureau.

Gene Ege, WB2LCH, has announced that he is no longer the QSL Manager for any station. He is QRT from ham radio. He still gets hundreds of cards for DX stations that stopped sending him their logs and compensation.

It has been reported that OX3SA has a new address. The new address is: Sven Lutzen, P.O. Box 504, DK-3920 QAQORTOQ, Greenland

Requests for QSLs from all Dateline DX Association operations [KH9 (Feb 98), ZK1XXP (97), AL7EL/KH9 (96)] should now be sent to: Tom Harrell, N4XP, 2011 New High Shoals Road, Watkinsville, Georgia USA 30677. This includes bureau requests. The WA4YBV route is no longer being used, however all cards sent earlier are being forwarded. Any inquiries are to be directed to Tom's E-maill address: n4xp@juno.com

Nick, RA1QQ, has started mailing QSL cards for his last expedition RA1QQ/1 to IOTA EU-082, 161, 160 (in East Russian Arctic). He has started to prepare for his new expedition to EU-102 (summer, 1999). Any type of sponsors and hams who want to enter the team are welcome. Contact's can be made through RA1QHJ via E-Mail at: albert@metacom.ru

PT5, MARIA FRANCISCA ISLAND. The PT5T team will activate IOTA SA-026 (DIB 067) during January 22-31st. Activity will be CW/SSB on 80-10 meters. QSL via PP5LL.

PT9, BRAZIL. Ben, PY1QN, will activate the special prefix PT9/PY1QN between December 31st and January 7th. He will be active from 3 different cities in the "Mato Grosso Do Sul State" (Bodoquena, Dourados and Amanmbai City). Activity will be only CW on 10/15/20/40/80 meters. QSL via Bureau or direct to PY1QN, Ruben, Rua Araponga, 341, Rio de Janeiro- RJ, 21720-940 Brazil.

VK9, COCOS ISLAND. Hide, JM1LJS, is now active as VK9CL. His activity will be on 80-10 meters. His operations will last until January 2nd. Over the past weekend, he was heard on 7008 kHz at 1428z working JA stations.

VP2M, MONTSERRAT. Fred, DF2SS, will be active now until January 8th as VP2MHJ. His activity will be on CW/SSB/RTTY/Pactor on 160-10 meters using only a 100 watts and a 50 ft. vertical. Over the past weekend, Fred was very active on the 30/17/12 meters along with activity on 160/80/40 meters. QSL via DL2MDZ.

VQ9QM QRT FOR NOW. The latest word from friends of Dale, W4QM, is that he is on the way from VQ9 to the Persian Gulf (He may be there now.). They also mention that Dale cannot operate aboard the ship. He will, however, be back later at VQ9 to operate.

XU7, CAMBODIA. A station signing XU7AAN was active over the past weekend on 15 and 40 meters CW. Check 7004 kHz around 1345 and between 2130 and 0000z. Also, check 21011 kHz around 2345 and as late as 0015z.

ZS7, ANTARCTICA. Bud, ZS7B, is working with the South African Antarctic division from a research ship placing beacon buoys from the Antarctic coastline to South Sandwich Islands. His QSOs as ZS7B will not count towards WABA but only WASA. He is active after 0100z around 14195 kHz. His length of stay is not known. QSL via ZS1B.

4274. What happened to WJ2O?

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-27 00:00:00 UTC
From: Terry Ashland <tashland@ncn.net>
Message-ID: <3686BF69.BC0B1FDF@ncn.net>
Source record: 26431

Does anybody know what happened to WJ20? His web site is no longer available. He is the author of the WJ2O Master QSO Logging Program. I no longer use his logging software, but I heard thru the grapevine that he went out of business.

Thanks for the info,
Terry, WK0F

4275. OA4/DH8WR QSL Info?

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-27 00:00:00 UTC
From: martyt@pobox.com

Dave's business became, well, busy and he felt he hadn't the time needed
to devote to the logging program. There were no new upgrades planned for
DOS based systems and the time and expense to convert WJ2) to WIN95 was
prohibitive to develop vs. the returns in sales needed to cover costs.
He's still in business, just not the ham software business

My father-in-law has the ICOM IC R-7000 for sale. He has the original box and papers. It is in excellent condition, under 40hrs of listening time.

Here is a brief description:
Speech was added, adapter for 12 volt use, delay feature, scan rate feature, memory scan, lock-out channels, range is 30mhz-2ghz, picks up am/fm, narrow/wide band, 800 mhz full coverage.

If you need any other information. I'll try to find out from him, please let me know. ASKING PRICE IS $900.
We're located in South Florida

PLS REPLY DIRECT

4286. Re: Dx on 11 meter

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-28 00:00:00 UTC
From: Louis Sica <ac0x@qsl.net>
Message-ID: <0HMh2.1487$fM1.42095@ptah.visi.com>
Source record: 26443

The rules used to be (and they may have been relaxed/metricized)

1) MAX 4 watts output
2)No contacts beyond 150 miles (which is too far for ground wave, and too close for skip with 4 watts)
3)Only contacts with other CB'ers and Canadian GRS stations
4)Max height 60' for ground mounted antennas
5)Max height 20' for antennas mounted on an existing building
6)AM/SSB on 40 specified fixed frequencies in the 27MHz range (26.96-27.41)

So, according to US rules, DXing on 11 meters in verboten. HOWEVER, a US ham would not neccesarily know this (there are no 11m questions on any ham exam) and these rules may be and probably are different in other countries. So, for some of us, 11m DXing may be legal. For most of us, it's not.

Of course, we can still TALK about it.

Hi. I am in need of a new radio mainly for AM Dxing but I might also be interested in Short Wave. Here are the radio's I am interested in I have a local RadioShack (don't we all?) so I would prefer to get a radio from there but I am also interested in the Super Radio III.
I am interested in the:
DX-397
DX-351
Optimus super radio
GE SRIII
These radios are all similar in price (my price range) but I am unclear weather or not the DX models would be better for me then the Super Radio's when listening mainly to AM. Are the DX all around better radios? Do you know were I could get reviews of some of these or comparisons maybe? I thank you for your help in advance.
-Mark

Haven't received mine yet either. I was starting to wonder what happened so
I sent another QSL card about a week or so ago.

Not bad, if you have space restrictions.

NB: read carefully the Power rating specs, if you are using a linear
amplifier.
I burned 2 coils with 1.5 KW CW

4310. QSL Manager Routing

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-30 00:00:00 UTC
From: Preferred Customer <ncyankee@worldnet.att.net>
Message-ID: <76ds75$n0@bgtnsc02.worldnet.att.net>
Source record: 26467

KB1DHC asked about QSL managers. The routing on the back of the card would be

XX4XYZ

via

G4AAA

where G4AAA is the manager for XX4XYZ. Sort the cards by the manager's call. ARRL Outgoing bureau will send the cards via buro to the manager.

Bill, W4WNT

I'm new to DXing and am not sure what to do when a station requests that my QSL card be sent to a QSL manager. I'm a member of ARRL so I can use the bureau to send cards overseas. I guess that the idea is to address and sort the card according to the QSL manager not the station. Perhaps the format is Station via QSLManager? I didn't find anything about how to indicate the Manager on the ARRL web page and I don't want the screw up when I send in my first cards.
Alternately, do you need to send the card directly to the QSL manager?
TIA

4311. Gel Cell Charging Question

Newsgroup: rec.radio.amateur.dx
Date: 1998-12-30 00:00:00 UTC
From: Terry Brown <brownt@frl.orst.edu>
Message-ID: <368A9F97.826ADD32@frl.orst.edu>
Source record: 26468
Cross-posted to: sci.chem.electrochem.battery,rec.radio.amateur.dx

My wife uses two Group 24 Gel Cells in her electric wheelchair. They are wired in series to provide 24 volts to power the chair. I have been able to get the first set of batteries to last over 3 years by checking the voltage every evening and only charging them when the total voltage dropped to 24.5 - 25.0 volts. These batteries are reaching the end of their life and I have purchased two more. At the time of purchase, the technicial told me two things that I question:

1. I can allow the gel cells to drop to 22 volts before charging them

2. Never charge them with a charger over 14 volts.

I need the expert advice of someone with a better knowledge of gel cell battery characteristics than I have to tell me if this is correct. What do you think?

My last question is that I want to use the two older batteries in 12 volt applications until they are no longer any good. Any suggestions for a trickle charge setup that I can charge both at the same time but not in series at a 12+ volt range? Charger voltage/current requirements? Suggestions?

Thanks very much!

Terry Brown

I haven't used that one, but I also have very limited space. I have had a
lot of success with the MFJ 1796, multiband. However, I run a max of 100
watts so can't say how it performs with more power.

And while on the subject, everyone here should read the rec.radio.cb stuff for a couple of days, clipboard all the ads for amplifiers and '10 meter radios' which also operate on 40 channels, and send them off to your favorite FCC Commissioner for processing. There are several web sites which openly advertise mail order amps, ten meter radios with cute goodies like roger beeps and other crap. I'd say that there ought to be laws against this stuff, but there already are. In recent months I have run into any number of cbers up as high as 28.500. They likely had no idea where they were because the radios being sold often don't show frequency, just a 'channel'. They're just more qrm.

Well, you CAN let them drop to 22 volts, but not a good idea for
best life. Any battery will last longer if it is kept at full charge.
14 volts is correct for gelled. They cannot take as much as other
batteries. 14.1 is about max.
If you leave the new batteries sitting around while you finish off
the old ones, the new ones may lose more life than you are gaining
from the old ones.

Hey Terry,

I think that the best way to charge Gel Cells are the same as Li+ Batteries. Using Lead Gel Batteries in Mobiles in the late ' 80 I found that Constant Voltage charging (I can't remember the cell voltage but it has to be very accurate) with max allowable current (depending on Capacity) in a known temperature is the best way. National Semi have several suitable components. The best quality batteries I used at that time was from Sonnenschein GmbH, germany. Try their homepage.

Go to www.batterychargers.com. Its Schumacher Electric. Under the category 'metal-handheld portable' you will find SE-70MA which is a 12/24 volt fully automatic battery charger. Its has 3 operating modes. One is non-automatic, you don't want to use that. The other two are fully automatic but for different kinds of 24 volt batteries. A fully automatic charger actually reads the voltage on the battery and only charges to the correct point, then shuts down, although it continues to monitor and will turn on again when needed. I don't know if this will exactly meet you needs, but they do have a good technical service group that actually answers e-mails. So you can tell them exactly what you needs are and get an answer. I did.

SB DX ARL ARLD052
ARLD052 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, The 599Rpt, 425DXnews, the Daily DX and QST. Thanks to all.

MONACO, 3A. Luc, I1YRL will be QRV in January as 3A/I1YRL on all bands. QSL to homecall.

LIBYA, 5A. Martino, IK3RIY, and Veronica, IK3ZAW, are active from 5A1A until January 4. Veronica plans to operate via RS-13 as well using Mode K. She is also QRV as 5A1IC and has been active on 30 meters around 2000z. QSL via operator's instructions.

TANZANIA, 5H. Dave, 5H3US, is now active on 6 meters with 160 watts. QSL via WA8JOC.

MOZAMBIQUE, C9. Jon, 3DA0CA, is active as C91CO/P using mostly CW on 40 to 10 meters. QSL via W4DR.

ANGOLA, D2. Gabriel, D32AF, is currently QRV on 20 to 10 meters. QSL via I3LLH.

MARQUESAS ISLANDS, FO. Pekka, OH1RY and Jaakko, OH1MA, will be active as FO0KOL and FO0SIL, respectively, from January 7 to 13. QSL to home calls.

GUERNSEY, GU. Colin, 2U0ARE, is a novice and can often be found between 10130 and 10135 khz from 1430 to 1600z.

MINAMI TORISHIMA, JD1. Ryo, JL1KFR/JD1, has been active on 160 meters between 1250 and 1440z. QSL to home call.

JAN MAYEN, JX. Per, LA7DFA, is QRV as JX7DFA, and has been working US East Coast and Mid West stations on 3799 khz just before 0100z. QSL to home call.

JORDAN, JY. George, JY9QJ, has been QRV on 160 meters beginning around 0230z. QSL via DL5MBY.

BANABA ISLAND, T33. Karl, DL1VU will be QRV through January as T33VU. QSL to home call.

SAN MARINO, T7. John, T77CD, has been working US East Coast and Mid West stations on 10 meters from 1320 to 1500z. QSL via I0MWI.

COCOS KEELING ISLANDS, VK9C. Hide, JM1LJS, is QRV as VK9CL until January 2, and has been active on 40, 20, 17, 15 and 12 meters SSB with some CW. QSL to home call.

INDIA, VU. Bernhard, DL2GAC, will be active as VU2BMS until January 13. QSL to home call.

CAMBODIA, XU. XU7AAN has been QRV on 20 meters around 2300 to 0100z. QSL via JH8YZB.

THIS WEEKEND ON THE RADIO. Usher in the New Year participating in the ARRL RTTY Roundup and the ARRL Straight Key Night. Please see December QST, pages 96 and 97, respectively, for details.

I have been on both sides of this question, from stateside DXer and as
a semi rare DX pedition...sort of. I operated from Guantanamo Bay,
Cuba (a separate country) on 80 and 160 CW three years ago during a
business trip. . I was pretty popular for a couple of days. I
operated from the Gitmo Club after my Govt workday was done and over
the weekend my work kept me there. I was my own QSL manager
e.g. KG4TJ via W3JT. I got cards both ways. Most US stations
and those to whom getting a card was important mailed their cards
directly to me. The US folks almost always included a SASE. Foreign
Amateurs send either an IRC or a "Green Stamp". They all got their
cards back as soon as I got my order for photo QSLs made..about
a month and a half after my return.
Many stations, particularly from East Europe used the bureau which
sent the cards to me via my stateside call. They also got their cards
but it just took much longer (They wait to get a stack of cards to
their bureau; the bureau waits to send it to ARRL and then
administrative delays to get it to the W3 bureau plus whatever delays
they incur with volunteer staffing and then waiting for a stack to
form to mail them back to me...and then reverse the process for the

other way around. It has been three years since my Gitmo operation. I made 1000 QSOs in five days. I got about 500 QSLs. I still get a few in my bureau envelope. A few cards went to K3JT and W3TJ and a few more went to the Gitmo Club in Cuba. Those folks were kind enough to track me down and got the cards to me.

So your answer is yes, you may send directly to the manager if you have an address. If you send direct, do the courtesy of an SASE or an IRC or equivalent. At a buck a pop for postage, envelope and a "very" nice photo QSL I could not afford to send cards directly to 500 stations. I did not mind sending cards to bureaus however since I recognize that many amateurs cannot afford to send cards directly to every station they work. I am highly selective myself. I send direct if it is new country, a country I have yet to get a QSL from or it counts for some award. All the rest go by Bureau.

I have a ground mounted vertical (Butternut) I have worked 150
countries in three years with 100 watts (mostly CW)

Hello everyone,

I have been a ham for nearly one year now. I have worked my way up the ladder from a no-code tech. to a tech+ (I am going for my General theory and extra code tomorrow). I have worked and earned each license to be able to work DX to enjoy more of the bands. I am sick and tired of these *$&% CBers who pump out hundreds of watts transmitting on OUR ham bands! All they do is buy 10m rigs, mod them, hook up their antennas with their "great" technical skills, and rag chew. They didn't earn crap! I hope all CBers who dis-obey ANY rules for CB power limits, antenna heights, etc. be punished harshly. Too bad the FCC is that strict. This applies to all the "bad" CBers. Note to all the "good" CBers. Get your ham ticket!
